Forward Looking Statements or Information

Certain statements in this Form 10-Q, including information set forth under the caption “Management’s Discussion and Analysis of Financial Condition and Results of Operations”, constitute “Forward-Looking Statements” within the meaning of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended. Such statements are typically punctuated by words or phrases such as “anticipates,” “estimate,” “should,” “may,” “management believes,” and words or phrases of similar import. The Company cautions investors that such forward-looking statements included in this Form 10-Q, or hereafter included in other publicly available documents filed with the Securities and Exchange Commission, reports to the Company’s stockholders and other publicly available statements issued or released by the Company involve significant risks, uncertainties, and other factors which could cause the Company’s actual results, performance (financial or operating) or achievements to differ materially from the future results, performance (financial or operating) or achievements expressed or implied by such forward-looking statements. Factors that could cause or contribute to such differences could include, but are not limited to, changes in demand, prices, the raw materials cost of zinc and the cost of natural gas; changes in economic conditions of the various markets the Company serves, as well as the other risks detailed herein and in the Company’s Form 10-K filed on February 20, 2009 with the Securities and Exchange Commission.

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

To the Board of Directors and Stockholders of
North American Galvanizing & Coatings, Inc.

We have reviewed the accompanying condensed consolidated balance sheet of North American Galvanizing & Coatings, Inc. and subsidiary (the "Company") as of June 30, 2009, and the related condensed consolidated statements of income for the three- and six-month periods ended June 30, 2009 and 2008, cash flows for the six-month periods ended June 30, 2009 and 2008 and stockholders' equity for the six-month period ended June 30, 2009. These interim financial statements are the responsibility of the Company's management

We conducted our reviews in accordance with the standards of the Public Company Accounting Oversight Board (United States). A review of interim financial information consists principally of applying analytical procedures and making inquiries of persons responsible for financial and accounting matters. It is substantially less in scope than an audit conducted in accordance with the standards of the Public Company Accounting Oversight Board (United States), the objective of which is the expression of an opinion regarding the financial statements taken as a whole. Accordingly, we do not express such an opinion.

Based on our reviews, we are not aware of any material modifications that should be made to such condensed consolidated interim financial statements for them to be in conformity with accounting principles generally accepted in the United States of America.

We have previously audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the consolidated balance sheet of North American Galvanizing & Coatings, Inc. and subsidiary as of December 31, 2008, and the related consolidated statements of income, stockholders' equity and cash flows for the year then ended (not presented herein); and in our report dated February 20, 2009, we expressed an unqualified opinion on those consolidated financial statements. In our opinion, the information set forth in the accompanying condensed consolidated balance sheet as of December 31, 2008 is fairly stated, in all material respects, in relation to the consolidated balance sheet from which it has been derived.

NORTH AMERICAN GALVANIZING & COATINGS, INC.

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS

FOR THE THREE- AND SIX-MONTHS ENDED JUNE 30, 2009 and 2008

UNAUDITED

Note 1.

Basis of Presentation

The condensed consolidated financial statements included in this report have been prepared by North American Galvanizing & Coatings, Inc. (the "Company") pursuant to its understanding of the rules and regulations of the Securities and Exchange Commission for interim reporting and include all normal and recurring adjustments which are, in the opinion of management, necessary for a fair presentation. The condensed consolidated financial statements include the accounts of the Company and its subsidiary.

Certain information and footnote disclosures normally included in financial statements prepared in accordance with accounting principles generally accepted in the United States of America have been condensed or omitted pursuant to such rules and regulations for interim reporting. The Company believes that the disclosures are adequate to make the information presented not misleading. However, these interim financial statements should be read in conjunction with the financial statements and notes thereto included in the Company's Annual Report on Form 10-K for the year ended December 31, 2008. The financial data for the interim periods presented may not necessarily reflect the results to be anticipated for the complete year.

The preparation of financial statements in conformity with accounting principles generally accepted in the United States of America requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the balance sheet dates and the reported amounts of revenues and expenses for each of the periods. Actual results will be determined based on the outcome of future events and could differ from the estimates. The Company's sole business is hot dip galvanizing and coatings which is conducted through its wholly owned subsidiary, North American Galvanizing Company ("NAGC").

Note 2.

Share-based Compensation

At June 30, 2009 the Company has two share-based compensation plans, which are shareholder-approved, the 2004 Incentive Stock Plan and the Director Stock Unit Program. The Company's 2004 Incentive Stock Plan (the Plan) permits the grant of share options and shares to its employees and directors for up to 2,500,000 shares of common stock. Director Stock Unit Program shares are issued under the plan. The Company believes that such awards better align the interests of its employees and directors with those of its shareholders.

The compensation cost for the Plan, exclusive of the Director Stock Unit Program, was \$279,000 and \$162,000 for the three-months ended June 30, 2009 and 2008, respectively, and \$542,000 and \$270,000 for the six-months ended June 30, 2009 and 2008, respectively.

Non-vested Shares. During January 2009, the Compensation Committee recommended and the Board of Directors approved a grant totaling 153,168 non-vested shares for management employees and 79,998 non-vested shares for directors. The weighted-average grant price of restricted stock granted in 2009 was \$3.67. During February and March 2008, the Compensation Committee recommended and the Board of Directors approved a grant totaling 126,667 non-vested shares for management employees and 66,667 non-vested shares for directors. During July 2008, the Compensation Committee recommended and the Board of Directors approved a grant totaling 80,000 non-vested shares for non-management directors. The weighted-average grant price of non-vested shares in 2008 was \$4.70. Non-vested shares granted to management employees, including management directors,

vest and become nonforfeitable on the date that is four years after the date of grant; or if the participant is a non-employee director of the Company at the time of the grant, the date that is two years after the date of the grant. The Company is recognizing this compensation expense over the two year or four year vesting period, as applicable, on a ratable basis. Non-vested shares are valued at market value on the grant date. The Company recognized \$199,000 and \$69,000 in amortization expense related to non-vested shares in the three-months ended June 30, 2009 and 2008, respectively, and \$375,000 and \$87,000 for the six-months ended June 30, 2009 and 2008, respectively.

Stock Options. Option awards are granted with an exercise price equal to the market price of the Company's stock at the date of grant; those option awards usually vest based on 4 years of continuous service and have 10-year contractual terms. No stock options were issued in the first six months of 2009 or 2008. The Company recognized \$80,000 and \$90,000 in the three-months ended June 30, 2009 and 2008, respectively, and \$167,000 and \$180,000 for the six-months ended June 30, 2009 and 2008, respectively for amortization expense related to stock options.

Director Stock Unit Program. At the Company's Annual Meeting held July 21, 2004, stockholders approved a Director Stock Unit Program (the "Program"). Under the Program, effective January 1, 2005, each non-management director is required to defer at least 50% (\$17,500) of his or her annual fee, and may elect to defer 75% (\$26,250) or 100% (\$35,000) of the annual fee. The director must make the annual deferral decision before the start of the year. Amounts deferred under the Program are converted into a deferred Stock Unit grant under the Company's 2004 Incentive Stock Plan at the average of the closing prices for a share of the Company's Common Stock for the ten trading days before the quarterly director fee payment dates.

To encourage deferral of fees by non-management directors, the Company makes a matching Stock Unit grant ranging from 25% to 75% of the amount deferred by the director as of the same quarterly payment dates.

Under the Program, the Company automatically defers from the management director's salary a dollar amount equal to 50% (\$17,500) of the director fees for outside directors. The management director may elect to defer an amount equal to 75% (\$26,250) or 100% (\$35,000) of the director fees for non-management directors from his or her compensation, and the Company matches deferrals by the management director with Stock Units at the same rate as it matches deferrals for non-management directors.

Deliveries of the granted stock are made five calendar years following the year for which the deferral is made subject to acceleration upon the resignation or retirement of the director or a change in control.

All of the Company's non-management directors elected to defer 100% of the annual board fee for both 2009 and 2008, and the Company's chief executive officer elected to defer a corresponding amount of his salary in 2009 and 2008. During the first six months of 2009, fees, salary and Company matching deferred by the directors represented a total of 65,884 stock unit grants valued at \$3.25 per stock unit. During the first six months of 2008, fees, salary and Company matching deferred by the directors represented a total of 45,479 stock unit grants valued at \$4.38 per stock unit. Company matching contributions under this plan were \$92,000 and \$85,000 in the first six months of 2009 and 2008 respectively.

Note 3.

Earnings Per Common Share

Basic earnings per common share for the periods presented are computed based upon the weighted average number of shares outstanding. Diluted earnings per common share for the periods presented are based on the weighted average shares outstanding, adjusted for the assumed exercise of stock options and for non-vested shares using the treasury stock method. The shares and earnings per share for all periods have been adjusted to reflect the Company's four-for-three stock split effected in the form of a stock dividend on September 14, 2008.

Three Months Ended June 30	Number of Shares	
	2009	2008
Basic	15,847,924	16,311,147
Diluted	16,600,433	16,938,175

Six Months Ended June 30	Number of Shares	
	2009	2008
Basic	15,793,689	16,371,500
Diluted	16,387,260	17,018,513

There were no options priced higher than the share market value at June 30, 2009.

Note 4.

Credit Agreement

On July 17, 2009, the Company entered into a new credit agreement between the Company and its subsidiary North American Galvanizing Company as borrowers and Wells Fargo Bank, N.A. as administrative agent, swing line lender and letter of credit issuer. The existing credit agreement with Bank of America, N.A. was canceled.

The new credit agreement provides for a revolving credit facility in the aggregate principal amount of \$25 million with future increases of up to an aggregate principal amount of \$15 million. The purpose of the new facility is to refinance a former credit agreement, provide for issuance of standby letters of credit, provide funding for acquisitions, and for other general corporate purposes. As of July 20, 2009, the Company has not borrowed under the new credit agreement, which has a maturity date of July 17, 2012.

Substantially all of the Company's accounts receivable, inventories, fixed assets and the common stock of its subsidiary are pledged as collateral under the new agreement, and the credit agreement is secured by full and unconditional guaranties from North American Galvanizing Company's subsidiaries. The credit agreement provides for an applicable margin ranging from 1.50% to 2.50% over LIBOR and a commitment fee of .25%. The applicable margin was 1.50% at inception of the agreement on July 17, 2009.

The credit agreement requires the Company to maintain compliance with certain covenants. At June 30, 2009 the Company would have been in compliance with the covenants of the new credit agreement. The required covenants of the new agreement are as follows: Funded Debt to EBITDA ratio – maximum allowed of 3.25; Fixed Charge Coverage Ratio – maximum allowed of 1.1 and Asset Coverage Ratio – minimum required of 1.50.

At June 30, 2009, under the former credit agreement which was canceled on July 17, 2009, the Company had unused borrowing capacity of \$24.8 million, based on no borrowings outstanding under the revolving credit facility, and \$0.2 million of letters of credit to secure payment of current and future workers' compensation claims.

Note 5.

Commitments and Contingencies

The Company has commitments with domestic and foreign zinc producers and brokers to purchase zinc used in its hot dip galvanizing operations. Commitments for the future delivery of zinc reflect rates then quoted on the London Metals Exchange and are not subject to price adjustment or are based on such quoted prices at the time of delivery. At June 30, 2009 the aggregate commitments for the procurement of zinc at fixed prices were approximately \$0.2 million. The Company reviews these fixed price contracts for losses using the same methodology employed to estimate the market value of its zinc inventory. The Company had no unpriced commitments for zinc purchases at June 30, 2009.

The Company's financial strategy includes evaluating the selective use of derivative financial instruments to manage zinc and interest costs. As part of its inventory management strategy, the Company expects to continue evaluating hedging instruments to minimize the impact of zinc price fluctuations. The Company had no derivative instruments required to be reported at fair value at June 30, 2009 or December 31, 2008, and did not utilize derivatives in the six-month period ended June 30, 2009 or the year ended December 31, 2008, except for the forward purchase agreements described above, which are accounted for as normal purchases.

The Company's total off-balance sheet contractual obligations at June 30, 2009, consist of approximately \$1.5 million for long-term operating leases for vehicles, office space, office equipment, galvanizing facilities and galvanizing equipment and approximately \$0.2 million for zinc purchase commitments. The various leases for galvanizing facilities, including option renewals, expire from 2009 to 2017. At June 30, 2009 the Company has approximately \$1.0 million in outstanding purchase commitments for various machinery, equipment and building improvements and \$0.8 million in outstanding commitments for other operating obligations.

NAGC was notified in 1997 by the Illinois Environmental Protection Agency ("IEPA") that it was one of approximately 60 potentially responsible parties under the Comprehensive Environmental Response, Compensation, and Liability Information System ("CERCLIS") in connection with cleanup of an abandoned site formerly owned by Sandoval Zinc Co., an entity unrelated to NAGC. The IEPA notice includes NACG as one of the organizations which arranged for the treatment and disposal of hazardous substances at Sandoval. The estimated timeframe for resolution of the IEPA contingency is unknown. The IEPA has yet to respond to a proposed work plan submitted in August 2000 by a group of the potentially responsible parties or suggest any other course of action, and there has been no activity in regards to this issue since 2001. Until the work plan is approved and completed, the range of potential loss or remediation, if any, is unknown, and in addition, the allocation of potential loss between the 60 potentially responsible parties is unknown and not reasonably estimable. Therefore, the Company has no basis for determining potential exposure and estimated remediation costs at this time and no liability has been accrued.

In September 2008, the United States Environmental Protection Agency (the "EPA") notified the Company of a claim against the Company as a potentially responsible party related to a Superfund site in Texas City, Texas. This matter pertains to galvanizing facilities of a Company subsidiary and its disposal of waste, which was handled by their supplier in the early 1980's. The EPA offered the Company a special de minimis party settlement to resolve potential liability that the Company and its subsidiaries may have under CERCLA at this Site. The Company accrued the \$112,145 de minimis settlement amount during the third quarter of 2008 and accepted the EPA's offer before the deadline of December 30, 2008.

The Company is committed to complying with all federal, state and local environmental laws and regulations and using its best management practices to anticipate and satisfy future requirements. As is typical in the galvanizing business, the Company will have additional environmental compliance costs associated with past, present and future operations. Management is committed to discovering and eliminating environmental issues as they arise. Because of frequent changes in environmental technology, laws and regulations management cannot reasonably quantify the Company's potential future costs in this area.

North American Galvanizing & Coatings, Inc. and its subsidiary are parties to a number of other lawsuits and environmental matters which are not discussed herein. Management of the Company, based upon their analysis of known facts and circumstances and reports from legal counsel, does not believe that any such matter will have a material adverse effect on the results of operations, financial condition or cash flows of the Company.

Note 6.

Stockholders' Equity

During the second quarter 2009, the holders of a majority of the outstanding shares of common stock of North American Galvanizing & Coatings, Inc. (the "Company") provided written consent approving an amendment to the Company's Restated Certificate of Incorporation, as amended, pursuant to the Company's consent solicitation authorized by the Company's Board of Directors. Through the written consent, the holders of a majority of the outstanding shares of the Company's common stock approved an increase in the number of authorized shares of the Company's common stock from 18,000,000 shares to 25,000,000 shares.

The Company filed a Certificate of Amendment of the Restated Certificate of Incorporation, as amended, with the Secretary of State of Delaware on April 2, 2009, which provides that the aggregate number of shares of the Company's common stock which the Company shall have authority to issue is 25,000,000 shares.

North American Galvanizing & Coatings, Inc.

Item 2. Management's Discussion and Analysis of Financial Condition and Results of Operations

GENERAL

North American Galvanizing is a leading provider of corrosion protection for iron and steel components fabricated by its customers. Hot dip galvanizing is the process of applying a zinc coating to fabricated iron or steel material by immersing the material in a bath consisting primarily of molten zinc. Based on the number of its operating plants, the Company is one of the largest merchant market hot dip galvanizing companies in the United States.

During the six-month period ended June 30, 2009, there were no significant changes to the Company's critical accounting policies previously disclosed in Form 10-K for the year ended December 31, 2008.

The Company's galvanizing plants offer a broad line of services including centrifuge galvanizing for small threaded products, sandblasting, chromate quenching, polymeric coatings, and proprietary INFRASHIELDSM Coating Application Systems for polyurethane protective linings and coatings over galvanized surfaces. The Company's mechanical and chemical engineers provide customized assistance with initial fabrication design, project estimates and steel chemistry selection.

The Company's galvanizing and coating operations are composed of eleven facilities located in Colorado, Kentucky, Missouri, Ohio, Oklahoma, Tennessee, Texas and West Virginia. The West Virginia facility began operating in the second quarter, 2009. These facilities operate galvanizing kettles ranging in length from 16 feet to 62 feet, and have lifting capacities ranging from 12,000 pounds to 40,000 pounds.

The Company maintains a sales and service network coupled with its galvanizing plants, supplemented by national account business development at the corporate level. In 2008, the Company galvanized steel products for approximately 1,800 customers nationwide.

All of the Company's sales are generated for customers whose end markets are principally in the United States. The Company markets its galvanizing and coating services directly to its customers and does not utilize agents or distributors. Although hot dip galvanizing is considered a mature service industry, the Company is actively engaged in developing new markets through participation in industry trade shows, metals trade associations and presentation of technical seminars by its national marketing service team.

Hot dip galvanizing provides metals corrosion protection for many product applications used in commercial, construction and industrial markets. The Company's galvanizing can be found in almost every major application and industry that requires corrosion protection where iron or steel is used, including the following end user markets:

- highway and transportation
- power transmission and distribution
- wireless and telecommunications
 - utilities
- petrochemical processing
 - industrial grating
- infrastructure including buildings, airports, bridges and power generation
 - wastewater treatment
- fresh water storage and transportation

- pulp and paper
- pipe and tube
- food processing
- agricultural (irrigation systems)
- recreation (boat trailers, marine docks, stadium scaffolds)
 - bridge and pedestrian handrail
 - commercial and residential lighting poles
- original equipment manufactured products, including general fabrication.

As a value-added service provider, the Company's revenues are directly influenced by the level of economic activity in the various end markets that it serves. Economic activity in those markets that results in the expansion and/or upgrading of physical facilities (i.e., construction) may involve a time-lag factor of several months before translating into a demand for galvanizing fabricated components. Despite the inherent seasonality associated with large project construction work, the Company maintains a relatively stable revenue stream throughout the year by offering fabricators, large and small, reliable and rapid turn-around service.

The Company records revenues when the galvanizing processes and inspection utilizing industry-specified standards are completed. The Company generates all of its operating cash from such revenues, and utilizes a line of credit secured by the underlying accounts receivable and zinc inventory to facilitate working capital needs.

Each of the Company's galvanizing plants operate in a highly competitive environment underscored by pricing pressures, primarily from other public and privately-owned galvanizers and alternative forms of corrosion protection, such as paint. The Company's long-term response to these challenges has been a sustained strategy focusing on providing a reliable quality of galvanizing to standard industry technical specifications and rapid turn-around time on every project, large and small. Key to the success of this strategy is the Company's continuing commitment and long-term record of reinvesting earnings to upgrade its galvanizing facilities and provide technical innovations to improve production efficiencies; and to construct new facilities when market conditions present opportunities for growth. The Company is addressing long-term opportunities to expand its galvanizing and coatings business through programs to increase industry awareness of the proven, unique benefits of galvanizing for metals corrosion protection. Each of the Company's galvanizing plants is linked to a centralized system involving sales order entry, facility maintenance and operating procedures, quality assurance, purchasing and credit and accounting that enable the plant to focus on providing galvanizing and coating services in the most cost-effective manner.

The principal raw materials essential to the Company's galvanizing and coating operations are zinc and various chemicals which are normally available for purchase in the open market.

Key Indicators

Key industries which historically have provided the Company some indication of the potential demand for galvanizing in the near-term, (i.e., primarily within a year) include highway and transportation, power transmission and distribution, telecommunications and the level of quoting activity for regional metal fabricators. In general, growth in the commercial/industrial sectors of the economy generates new construction and capital spending which ultimately impacts the demand for galvanizing.

Key operating measures utilized by the Company include new orders, zinc inventory, tons of steel galvanized, revenue, pounds and labor costs per hour, zinc usage related to tonnage galvanized, and lost-time safety performance. These measures are reported and analyzed on various cycles, including daily, weekly and monthly.

The Company utilizes a number of key financial measures to evaluate the operations at each of its galvanizing plants, to identify trends and variables impacting operating productivity and current and future business results, which include: return on capital employed, sales, gross profit, fixed and variable costs, selling and general administrative expenses, operating cash flows, capital expenditures, interest expense, and a number of ratios such as profit from operations and accounts receivable turnover. These measures are reviewed by the Company's operating and executive management each month, or more frequently, and compared to prior periods, the current business plan and to standard performance criteria, as applicable.

RESULTS OF OPERATIONS

The following table shows the Company's results of operations for the three- and six-month periods ended June 30, 2009 and 2008:

	(Dollars in thousands)					
	2009			2008		
	Amount	% of Sales		Amount	% of Sales	
Sales	\$ 18,143	100.0 %		\$ 21,978	100.0 %	
Cost of sales excluding depreciation and amortization	11,284	62.2 %		12,957	58.9 %	
Selling, general and administrative expenses	2,476	13.6 %		2,707	12.3 %	
Depreciation and amortization	884	4.9 %		852	3.9 %	
Operating income	3,499	19.3 %		5,462	24.9 %	
Interest income	6	0.0 %		136	0.6 %	
Income before income taxes	3,505	19.3 %		5,598	25.5 %	
Income tax expense	1,285	7.1 %		2,175	9.9 %	
Net income	\$ 2,220	12.2 %		\$ 3,423	15.6 %	

	(Dollars in thousands)					
	2009			2008		
	Amount	% of Sales		Amount	% of Sales	
Sales	\$ 38,752	100.0 %		\$ 42,680	100.0 %	
Cost of sales excluding depreciation and amortization	23,367	60.3 %		25,777	60.3 %	
Selling, general and administrative expenses	5,169	13.3 %		4,849	11.4 %	
Depreciation and amortization	1,771	4.6 %		1,709	4.0 %	
Operating income	8,445	21.8 %		10,345	24.3 %	
Interest income	19	0.0 %		147	0.3 %	
Income before income taxes	8,464	21.8 %		10,492	24.6 %	
Income tax expense	2,783	7.2 %		3,994	9.4 %	
Net income	\$ 5,681	14.6 %		\$ 6,498	15.2 %	

2009 COMPARED TO 2008

Sales. Sales for the three-months and six-months ended June 30, 2009 decreased 17.4% and 9.2%, respectively, over the prior year. The decrease in second quarter and first half revenues was due primarily to a lower average sales price compared to the same periods in 2008.

Second quarter 2009 volumes were 2.9% lower than volumes in the second quarter of 2008. The current economic downturn has negatively affected overall demand for galvanizing from the Company's customer base, which represent numerous markets including petrochemical, highway and transportation, energy, utilities, communications, irrigation, pulp and paper, waste water treatment, food processing, recreation, and the manufacture of original equipment. First half 2009 volumes were 7.1% higher than volumes in the first half of 2008.

For 2009, average selling prices for galvanizing and related coating services were 15.0% lower than the prior year second quarter and 15.2% lower than the first half of 2008.

Cost of Goods Sold. Cost of goods sold for the three-months ended June 30, 2008 decreased \$1.7 million over the same prior year period due to a \$1.5 million decrease in zinc costs and a \$0.2 million decrease in all other manufacturing costs. For the first half of 2009, cost of goods sold decreased \$2.4 million over the same period in 2008. Of the \$2.4 million decrease, \$3.3 million was due to a decrease in zinc costs offset by a \$0.9 million increase in all other manufacturing costs.

Selling, General and Administrative (SG&A) Expenses. SG&A decreased \$0.2 million in the second quarter of 2009 compared to the prior year primarily due to decreases in the provision for doubtful accounts. The Company has focused on collecting receivables and preventing collection issues during the economic downturn. SG&A expenses for the first half of 2009 were \$0.3 million higher than SG&A expenses for the first half of 2008 due to increases in legal and professional fees of \$0.4 million and increases in share based compensation of approximately \$0.2 million, offset by a decrease in the provision for doubtful accounts of \$0.2 million.

Operating Income. For the quarter ended June 30, 2009, operating income was \$3.5 million compared to \$5.5 million for the second quarter of 2008. The operating income for the six-months ended June 30, 2009 was \$8.4 million compared to \$10.3 million for the same 2008 period. The decrease in operating income resulted from the factors explained above.

Income Taxes. The Company's effective income tax rates for the second quarter of 2009 and 2008 were 36.7% and 38.9%, respectively. For the six months ended June 30, 2009 and 2008, the effective tax rates were 32.9% and 38.1%, respectively. The effective tax rates differ from the federal statutory rate primarily due to state income taxes and minor adjustments to previous tax estimates.

Net Income. For the second quarter of 2009, the Company reported net income of \$2.2 million compared to net income of \$3.4 million for the second quarter of 2008. For the six months ended June 30, 2009, the net income was \$5.7 million compared to \$6.5 million for the six months ended June 30, 2008. The decrease in net income resulted from the factors explained above.

LIQUIDITY AND CAPITAL RESOURCES

The Company's cash flow from operations and borrowings under credit facilities have been adequate to fund its current facilities' working capital and capital spending requirements and is expected to be sufficient to fund the recurring level of operations for the next twelve months. During 2009 and 2008, operating cash flow has been the primary source of liquidity. The Company monitors working capital and planned capital spending to assess liquidity and minimize cyclical cash flow.

On June 25, 2009, the Company announced that its Board of Directors had approved a new capital and funding structure designed to facilitate the Company's growth strategy. The Company's new capital and funding structure will consist of a combination of an expanded bank facility (see Note 4) and a \$10 million capital raise through a private placement offering of subordinated notes and warrants.

Cash from operations increased \$2.0 million in the first six months of 2009 versus the first six months of 2008. This increase was primarily attributable to a reduction in accounts receivable in 2009 compared with an increase in accounts receivable in 2008, partially offset by a \$0.8 million decrease in net earnings.

Capital expenditures for the first six months of 2009 were \$6.2 million. Expenditures in the first half of 2009 include the construction of the new facility in Benwood, West Virginia and upgrading facilities at the Hurst, Texas plant. In the first six months of 2008, the Company spent \$0.6 million for capital expenditures. The Company expects capital expenditures for 2009 to approximate \$6.9 million including \$3.3 million for the new plant in Benwood, West Virginia.

During the first six months of 2009 and 2008, the company repurchased common stock for the treasury totaling \$0.2 million and \$1.6 million, respectively. The Company has no outstanding debt as of June 30, 2009.

The Company has various commitments primarily related to vehicle and equipment operating leases, facilities operating leases, and zinc purchase commitments. The Company's off-balance sheet contractual obligations at June 30, 2009, consist of \$1.5 million for long-term operating leases for vehicles, office space, office equipment, galvanizing facilities and galvanizing equipment and approximately and approximately \$0.2 million for zinc purchase commitments. In addition, at June 30, 2009 the Company has approximately \$1.0 million in outstanding purchase commitments for various machinery, equipment and building improvements and \$0.8 million in outstanding commitments for other operating obligations. The various leases for galvanizing facilities, including option renewals, expire from 2009 to 2017. The vehicle leases expire annually on various schedules through 2012. NAGC periodically enters into fixed price purchase commitments with domestic and foreign zinc producers to purchase a portion of its requirements for its hot dip galvanizing operations; commitments for the future delivery of zinc can be for up to one year.

ENVIRONMENTAL MATTERS

The Company's facilities are subject to extensive environmental legislation and regulations affecting their operations and the discharge of wastes. The cost of compliance with such regulations in the first six months of 2009 and 2008 was approximately \$0.9 million and \$0.8 million, respectively, for the disposal and recycling of wastes generated by the galvanizing operations.

NAGC was notified in 1997 by the Illinois Environmental Protection Agency ("IEPA") that it was one of approximately 60 potentially responsible parties under the Comprehensive Environmental Response, Compensation, and Liability Information System ("CERCLIS") in connection with cleanup of an abandoned site formerly owned by Sandoval Zinc Co., an entity unrelated to NAGC. The IEPA notice includes NAGC as one of the organizations which arranged for the treatment and disposal of hazardous substances at Sandoval. The estimated timeframe for resolution of the IEPA contingency is unknown. The IEPA has yet to respond to a proposed work plan submitted in August 2000 by a group of the potentially responsible parties or suggest any other course of action, and there has been no activity in regards to this issue since 2001. Until the work plan is approved and completed, the range of potential loss or remediation, if any, is unknown, and in addition, the allocation of potential loss between the 60 potentially responsible parties is unknown and not reasonably estimable. Therefore, the Company has no basis for determining potential exposure and estimated remediation costs at this time and no liability has been accrued.

In September 2008, the United States Environmental Protection Agency (the "EPA") notified the Company of a claim against the Company as a potentially responsible party related to a Superfund site in Texas City, Texas.

This matter pertains to galvanizing facilities of a Company subsidiary and its disposal of waste, which was handled by their supplier in the early 1980's. The EPA offered the Company a special de minimis party settlement to resolve potential liability that the Company and its subsidiaries may have under CERCLA at this Site. The Company accrued the \$112,145 de minimis settlement amount during the third quarter of 2008 and accepted the EPA's offer before the deadline of December 30, 2008.

The Company is committed to complying with all federal, state and local environmental laws and regulations and using its best management practices to anticipate and satisfy future requirements. As is typical in the galvanizing business, the Company will have additional environmental compliance costs associated with past, present and future operations. Management is committed to discovering and eliminating environmental issues as they arise. Because of frequent changes in environmental technology, laws and regulations management cannot reasonably quantify the Company's potential future costs in this area.

North American Galvanizing & Coatings, Inc. and its subsidiary are parties to a number of other lawsuits and environmental matters which are not discussed herein. Management of the Company, based upon their analysis of known facts and circumstances and reports from legal counsel, does not believe that any such matter will have a material adverse effect on the results of operations, financial conditions or cash flows of the Company.

Item 3. Quantitative and Qualitative Disclosures About Market Risk

The Company's operations include managing market risks related to changes in interest rates and zinc commodity prices.

Interest Rate Risk. The Company is exposed to financial market risk related to changes in interest rates to the extent the company has borrowing outstanding. At June 30, 2009, the Company had no outstanding debt.

Zinc Price Risk. NAGC periodically enters into fixed price purchase commitments with domestic and foreign zinc producers to purchase a portion of its zinc requirements for its hot dip galvanizing operations. Commitments for the future delivery of zinc, which can be for up to one (1) year, reflect rates quoted on the London Metals Exchange. At June 30, 2009, the aggregate fixed price commitments for the procurement of zinc were approximately \$0.2 million (note 5). With respect to these zinc fixed price purchase commitments, a hypothetical decrease of 10% in the market price of zinc from the June 30, 2009 level represented a potential lost gross margin opportunity of approximately \$20,000.

The Company's financial strategy includes evaluating the selective use of derivative financial instruments to manage zinc and interest costs. As part of its inventory management strategy, the Company recognizes that hedging instruments may be effective in minimizing the impact of zinc price fluctuations. The Company's current zinc forward purchase commitments are considered derivatives, but the Company has elected to account for these purchase commitments as normal purchases.

Item 4. Controls and Procedures

As of the end of the period covered by this report, management, including our chief executive officer and chief financial officer, evaluated the effectiveness of the design and operation of our disclosure controls and procedures. Based upon, and as of the date of, the evaluation, our chief executive officer and chief financial officer concluded that the disclosure controls and procedures were effective, in all material respects, to ensure that information required to be disclosed in the reports we file and submit under the Exchange Act is recorded, processed, summarized and reported as and when required.

The Company's certifying officers have indicated that there were no significant changes in internal controls over financial reporting that have occurred during the fiscal quarter ended June 30, 2009 that materially affected, or were reasonably likely to materially affect, internal controls over financial reporting.

- 19 -

Part II

Other Information

Item 1. Legal Proceedings.

NAGC was notified in 1997 by the Illinois Environmental Protection Agency (“IEPA”) that it was one of approximately 60 potentially responsible parties under the Comprehensive Environmental Response, Compensation, and Liability Information System (“CERCLIS”) in connection with cleanup of an abandoned site formerly owned by Sandoval Zinc Co., an entity unrelated to NAGC. The IEPA notice includes NAGC as one of the organizations which arranged for the treatment and disposal of hazardous substances at Sandoval. The estimated timeframe for resolution of the IEPA contingency is unknown. The IEPA has yet to respond to a proposed work plan submitted in August 2000 by a group of the potentially responsible parties or suggest any other course of action, and there has been no activity in regards to this issue since 2001. Until the work plan is approved and completed, the range of potential loss or remediation, if any, is unknown, and in addition, the allocation of potential loss between the 60 potentially responsible parties is unknown and not reasonably estimable. Therefore, the Company has no basis for determining potential exposure and estimated remediation costs at this time and no liability has been accrued.

In September 2008, the United States Environmental Protection Agency (the “EPA”) notified the Company of a claim against the Company as a potentially responsible party related to a Superfund site in Texas City, Texas. This matter pertains to galvanizing facilities of a Company subsidiary and its disposal of waste, which was handled by their supplier in the early 1980’s. The EPA offered the Company a special de minimis party settlement to resolve potential liability that the Company and its subsidiaries may have under CERCLA at this Site. The Company accrued the \$112,145 de minimis settlement amount during the third quarter of 2008 and accepted the EPA’s offer before the deadline of December 30, 2008.

Item 1A. Risk Factors.

Galvanizing is a business sensitive to economic downturns.

The Company is principally engaged, through its wholly-owned subsidiary, in hot-dip galvanizing of metal products and components fabricated by its customers. All of the Company’s revenue is generated from the value-added galvanizing and coating of its customer’s products. The galvanizing process provides effective corrosion protection of fabricated steel, which is used in numerous markets such as petrochemical, highway and transportation, energy, utilities, communications, irrigation, pulp and paper, waste water treatment, food processing, recreation and the manufacture of original equipment. The demand for these products and, in turn, for the Company’s galvanizing, is dependent on the general economy, the industries listed and other factors affecting domestic goods activity. The current economic downturn and a continued or worsening economic downturn may negatively affect the Company’s customer base. Continued disruption in the credit markets could adversely affect the Company’s customers’ ability to access capital, which supports the continuation and expansion of the Company’s customers’ projects, and may lead to project cancellations, suspensions or delays. A number of other factors, including financing conditions and potential bankruptcies in the industries the Company serves, could adversely affect the Company’s customers and their ability or willingness to fund capital expenditures in the future and pay for past services. Disruptions in the Company’s customers’ projects or businesses generally could cause a significant reduction in demand, which could cause a material adverse effect on price levels and the quantity of galvanizing services provided by the Company, thereby adversely affecting the Company’s business, operating results and financial condition.

The price volatility and availability of zinc and natural gas could reduce the Company’s profits.

Zinc and natural gas, combined, represent the largest portion of the Company’s cost of goods sold. The price and availability of zinc and natural gas that is used in the hot-dip galvanizing process is highly competitive and cyclical. The following factors, most of which are beyond the Company’s control, affect the price of zinc and natural gas:

- supply and demand factors;
- freight costs and transportation availability;
- inventory levels;
- trade duties and taxes; and
- labor disputes.

In response to an increase in costs, the Company may seek to maintain its profit margin by attempting to increase the price of its services, but may not be successful in passing these price increases through to its customers, particularly in an economic downturn. If the prices of zinc and/or natural gas increase significantly and the Company is not successful in passing these price increases through to its customers, the Company's results of operations and profits may be significantly reduced.

Limited access to capital for internal growth and strategic acquisitions could adversely affect the Company's business, operating results and financial condition.

The Company's operating and market strategies to maintain competitive position and to develop new markets include investments in internal growth and strategic acquisitions. If the Company is unable to access capital through its senior credit facility or raise capital, on favorable terms or at all, the Company may not be able to invest in internal growth and strategic acquisitions, which could adversely affect the Company's business, operating results and financial condition.

The Company's acquisition strategy involves a number of risks.

The Company intends to grow through acquisitions of assets of, or interests in, additional geographically strategic hot-dip galvanizing plants or related businesses. The Company routinely reviews potential acquisition opportunities, however it may not be able to implement its growth strategy if it is unable to identify strategic acquisition targets or make acquisitions on acceptable terms. In addition, the Company may need to obtain additional equity or debt financing in order to make future acquisitions, which financing may not be available on favorable terms, or at all. Any such equity financing may have a dilutive effect on current stockholders of the Company. If the Company is able to make acquisitions, the Company may not be able to effectively integrate an acquired business or acquired assets. The process of integrating acquired businesses and/or assets involves certain risks, including:

- assimilating operations and products may be unexpectedly difficult;
- management's attention may be diverted from other business concerns;
- the Company may enter markets in which it has limited or no direct experience;
- additional financial and accounting challenges and complexities in areas such as tax planning, treasury management and financial reporting;
- failure to realize the cost savings or other financial benefits that the Company anticipated in connection with the acquisition;
- risks and liabilities from the acquisition targets, some of which may not be discovered during due diligence; and
 - the Company may lose key employees and/or key customers of an acquired business.

Risks involved in the Company's acquisition strategy could adversely affect the Company's business, operating results and financial condition.

The departure of key personnel, including senior management and executive officers, could disrupt the Company's business.

The Company's ability to provide a competitive service that is both acceptable in quality and price requires a strong team of executive officers and senior management that are technically skilled in providing galvanizing services. In past years, the Company has downsized administrative and management positions as a result of cost-cutting initiatives. The Company cannot be certain that any executive officer or member of senior management will continue in such capacity for any particular period of time. If there is turnover in such key personnel, the Company may not be able to hire and retain qualified replacements. A lack of effective executive officers and senior management could impact the Company's ability to operate and compete in the galvanizing industry, which could disrupt the Company's business and adversely affect its results of operations.

Galvanizing is a highly competitive business, and if the Company is unable to compete effectively, the Company may experience a reduction in demand for galvanizing services, which in turn could adversely affect the Company's revenues.

Galvanizing is a highly competitive business with relatively low barriers to entry. The Company competes with other galvanizing companies, captive galvanizing facilities operated by manufacturers and alternate forms of corrosion protection such as paint. Certain of the Company's competitors are larger than the Company and have more resources than the Company does. Competition is based on a number of factors, including price. Excessive capacity in hot-dip galvanizing could have a material adverse effect on price levels and the quantity of galvanized services provided by the Company. In addition, certain of the Company's competitors may have lower cost structures and may be able to provide services at a lower price than the Company is able to provide. The Company cannot be certain that its competitors will not develop the expertise, experience and resources to provide services that are superior in price and quality. In addition, the Company cannot be certain that it will be able to maintain or enhance its competitive position within the industries it serves or maintain or increase its customer base. If the Company is unable to compete effectively, the Company may experience a reduction in demand, which in turn could adversely affect the Company's revenues.

The Company's operating and financial results may vary significantly from quarter to quarter.

The Company's quarterly operating and financial results are difficult to predict and could fluctuate significantly from period to period. The level of the Company's revenues, gross margins and results of operations at any given time will be based primarily on the following factors, many of which the Company has no control over:

- the timing and volume of work from the Company's customers;
- general economic conditions;
- escalating raw material and/or energy costs;
- interruptions to raw material and/or energy supplies;
- the budgetary spending patterns of the Company's customers;
- variations in the margins of projects performed during any particular quarter;
- losses experienced in the Company's operations;
- a change in the demand or production of the Company's services caused by severe weather conditions or otherwise;
- a change in the mix of the Company's customers, contracts and business;
- a change in the Company's customer delivery schedule; and
- increases in the Company's cost of goods sold.

If realized, any of these factors could have a material adverse effect on the Company's business, financial condition and operating results.

The Company may not be able to generate or manage internal growth.

Part of the Company's strategy is to grow its business internally to increase its competitiveness in the market. As a result, the Company is subject to certain growth-related risks, including the risk that the Company will be unable to retain personnel or secure additional qualified employees, attract new customers or increase the number or size of projects performed for existing customers or acquire other resources necessary to service such growth adequately. The Company cannot be certain that it will be able to generate sufficient revenues to fund expenses related to enhanced operations and support internal growth. As such, any efforts to generate internal growth may have a negative impact on operating results. Even if the Company is able to generate internal growth, if the Company fails to effectively manage such growth in a manner that minimizes strains on its resources, the Company could experience disruptions in operations and ultimately be unable to generate revenues or profits.

The Company's Board of Directors may have a significant influence on the outcome of stockholder votes.

As of April 15, 2009, the Company's board of directors collectively owned approximately 25.7% of the Company's common stock. Accordingly, the directors, as a group, may be able to significantly influence the outcome of the Company's stockholder votes, including votes concerning the election of directors, the adoption or amendment of provisions in the Company's certificate of incorporation or bylaws, and the approval of mergers and other significant corporate transactions. The existence of a relatively high level of ownership concentrated in a few persons makes it less likely that any other holder of the Company's common stock will be able to affect the Company's management or direction. These factors may also have the effect of delaying or preventing a change in management or voting control or the Company's participation in a merger or other significant corporate transaction.

Failure to renew or reach an acceptable new collective bargaining agreement could result in labor disruptions in the Company's Canton, Ohio galvanizing facility, which could adversely impact the Company's business, operating results and financial condition.

The Company is subject to a collective bargaining agreement with the United Steel, Paper and Forestry, Rubber, Manufacturing, Energy Allied Industrial and Service Workers International Union, which provides for wage and benefit programs for approximately 30 of the Company's employees in its Canton, Ohio galvanizing facility. Less than ten percent of the Company's employees are organized in the union and covered by the collective bargaining agreement. The collective bargaining agreement expires in November 2009, and the Company expects to begin negotiations with respect to a new agreement later this year. There can be no guarantee that the Company will be successful in securing a new agreement on terms satisfactory to the Company or at all. If an agreement is not reached before the expiration of the current agreement, the Company could be faced with a union workforce disruption at the Company's Canton, Ohio galvanizing facility, which could adversely impact the Company's business, operating results and financial condition.

Various governmental regulations and environmental risks applicable to the galvanizing business may require the Company to take actions which will adversely affect its results of operations.

The Company's business is subject to numerous federal, state, provincial, local and foreign laws and regulations, including regulations with respect to air emissions, storm water and the generation, handling, storage, transportation, treatment and disposal of waste materials. Legal requirements are frequently changed and subject to interpretation, and the presently unpredictable ultimate cost of compliance with these requirements could affect operations. The Company may be required to make significant expenditures to comply with governmental laws and regulations. Existing laws or regulations, as currently interpreted or reinterpreted in the future, or future laws or regulations, could have a material adverse effect on the results of operations and financial condition.

Item 2. Unregistered Sales of Equity Securities and Use of Proceeds – Not applicable.

Item 3. Defaults Upon Senior Securities – Not applicable.

Item 4. Submission of Matters to a Vote of Security Holders

During the second quarter 2009, the holders of a majority of the outstanding shares of common stock of North American Galvanizing & Coatings, Inc. (the “Company”) provided written consent approving an amendment to the Company’s Restated Certificate of Incorporation, as amended, pursuant to the Company’s consent solicitation authorized by the Company’s Board of Directors. Through the written consent, the holders of a majority of the outstanding shares of the Company’s common stock approved an increase in the number of authorized shares of the Company’s common stock from 18,000,000 shares to 25,000,000 shares.

The Company filed a Certificate of Amendment of the Restated Certificate of Incorporation, as amended, with the Secretary of State of Delaware on April 2, 2009, which provides that the aggregate number of shares of the Company’s common stock which the Company shall have authority to issue is 25,000,000 shares.

Item 5. Other Information – Not applicable.

Item 6. Exhibits

No. Description

3.1 The Company’s Restated Certificate of Incorporation, as amended (incorporated by reference to Exhibit 3.1 to the Company’s Pre-Effective Amendment No. 1 to Registration Statement on Form S-3 (Reg. No. 333-4937) filed with the Commission on June 7, 1996).
