Sasol Limited Group

**Financial results overview**

Earnings attributable to shareholders for the six months ended 31 December 2015 decreased by 63% to R7,3 billion from R19,5 billion in the prior period. Headline earnings per share (HEPS) decreased by 24% to R24,28, and earnings per share (EPS) decreased by 63% to R11,97 compared to the prior period.

Profit from operations of R14,9 billion decreased by 50%, compared to the prior period on the back of challenging and highly volatile global markets. Average Brent crude oil prices moved dramatically lower by 47% compared to the prior period (average dated Brent was US\$47 per barrel (/b) for the six months ended 31 December 2015 compared to US\$89/b in the prior period). Furthermore, the price of our basket of commodity chemical prices declined by 23% compared to the prior period. The impact of lower oil and commodity chemical prices was partly offset by a 24% weaker average rand/US dollar exchange rate (R13,62/US\$ for the six months ended 31 December 2015 compared with R10,99/US\$ in the prior period). The average margin for our speciality chemicals remained resilient compared to the prior period.

**Maintaining momentum**

**Overview\***

**Steering through volatile markets**

We continued to maintain momentum by focusing on factors within our control, and delivered a strong set of production volumes across most of the value chain, despite the turbulent macroeconomic environment. The first half of the 2016 financial year was characterised by a further steep decline in international oil and commodity chemical prices, driven mainly by global economic uncertainty in certain key markets and softer demand. Oil prices decreased by 47%, given oil supply concerns and a lack of clear signals from the Organisation of the Petroleum Exporting Countries in rebalancing the global oil market. Commodity chemical prices were also lower due to depressed oil prices and poor demand in some key markets. The average basket of commodity chemical prices, however, only decreased by 23% in comparison to the 47% decrease in oil prices. Margins for speciality chemicals remained resilient, despite ongoing market volatility. The rand/US dollar exchange rate, on the other hand, weakened by 24% due to negative market sentiment over the South African economy and dollar strength compared to most emerging market currencies. The weaker rand provided a partial buffer against lower oil and commodity chemical prices.

Importantly, we also achieved much higher sustainable cost savings than forecasted from our Business Performance Enhancement Programme (BPEP). Our low oil price Response Plan (RP) achieved actual cash conservation benefits ahead of our internal targets. We have updated the scope and extended our RP targets through to the 2018 financial year in anticipation of a lower oil price environment.

***President and Chief Executive Officer, David E. Constable says:***

“The decisive actions taken to reposition Sasol through our Business Performance Enhancement Programme, and our low oil price Response Plan, place the organisation in a good position to maintain a strong operational performance, despite the challenging and volatile energy landscape. Given a ‘lower-for-much-longer’ oil price scenario, we have intensified and extended the scope of our Response Plan, by derisking and rephasing certain projects, while prioritising capital for the advancement of our growth projects in Southern Africa and the United States (US).

Over the next three months, my successors and I will continue to work through a detailed handover plan to ensure a smooth leadership transition. I would like to extend my sincere appreciation to my Sasol colleagues, the members of the Sasol Limited Board and our business partners who, through their performance, dedication and commitment, have ensured that we continue to deliver shareholder value for the benefit of all our stakeholders.”

\* All comparisons refer to the prior period for the six months ended 31 December 2014. Except for earnings attributable to

shareholders and the RP cash conservation measures, all numbers are quoted on a pre-tax basis.

Sasol Limited Interim financial results 2016

3

Despite the challenging macroeconomic environment, we continued to deliver a strong operational performance, with increased production volumes and cost increases contained to well below inflation. The highlights of our operational performance can be summarised as follows:

Secunda Synfuels Operations (SSO) production volumes increased by 3% (1 million barrels) compared to the prior period;

Total liquid fuels production for the Energy Business increased by 4% (1,1 million barrels) compared to the prior period, as a result of a higher portion of SSO's volumes being utilised by the Energy Business;

The ORYX GTL facility continued to deliver a solid performance, with an average utilisation rate of 90% for the period;

Secunda Chemicals and Sasolburg Operations' production volumes remained in line with the prior period. The increase in volumes from our Fischer-Tropsch Wax Expansion Project (FTWEP) was offset by lower polypropylene (C3) volumes, due to planned commissioning activities associated with the C3 Expansion Project;

Sales volumes for the Base Chemicals Business decreased by 13%, given lower C3 volumes available as a result of the commissioning of the C3 Expansion Project and softer demand for certain commodity chemical products; and

Sales volumes from our Performance Chemicals Business, normalised for the planned shutdown at our ethylene plant in North America, remained consistent with the prior period.

In addition, Sasol's profitability was further impacted by the following notable once-off and significant items:

net remeasurement items expense of R7,6 billion compared to a R0,2 billion expense in the prior period. These items relate mainly to a partial impairment of our share in the Montney shale gas asset of R7,4 billion (CAD665 million), due to a further deterioration of conditions in the North American gas market resulting in a 16% decline in forecasted natural gas prices. The impairment reduces the carrying value of the asset to approximately CAD559 million. This asset remains highly sensitive to changes in the gas price and accordingly, we estimate that a 5% change in the gas price may result in a change of CAD255 million (approximately R2,9 billion) in the recoverable amount of the asset;

a cash-settled share-based payment charge to the income statement of R0,4 billion compared to a credit of R2,9 billion in the prior period; and

the reversal of a provision of R2,3 billion (US\$166 million) based on a favourable ruling received from the Tax Appeal Tribunal in Nigeria relating to the Escravos Gas-to-Liquids (EGTL) investment. The Nigerian Federal Inland Revenue Service has appealed the decision. The outcome of the appeal process is uncertain, and a possible obligation may arise as a result of any future proceedings. At this time, the value of any potential future obligation cannot be reasonably estimated.

We continued to drive our cost containment programme and reduced our cash fixed costs by 4,5% in nominal terms compared to the prior period. Excluding the impact of inflation, exchange rates and once-off costs, our cash fixed costs reduced by an exceptional 8,4%. This was achieved by an accelerated sustainable delivery of our BPEP and RP programmes.

Our company-wide BPEP, which is aimed at delivering sustainable cost savings of R4,3 billion by the end of the 2016 financial year, is nearing its completion. We delivered actual cost savings up to 31 December 2015 of R3,1 billion, which are on track to meet our savings target forecast of R4,0 billion, at an annual exit run rate of

R4,3 billion by the end of financial year 2016. Implementation costs amounted to R132 million for the period compared to R1,9 billion for the 2015 financial year. Given an ongoing low oil price environment, we have revised our BPEP savings target to achieve sustainable savings at an exit run rate of R5 billion by the end of the 2017 financial year. Cost trends are still forecast to track SA PPI from the 2017 financial year.

Our comprehensive RP, focusing on cash conservation to counter the lower-for-longer oil price environment, has continued to yield positive cash savings in line with our 2016 financial year targets, despite margin contraction and difficulties in placing product in the market. The RP realised R10,8 billion in cash savings for

Sasol Limited Interim financial results 2016

4

Sasol Limited Group

**Overview**

(continued)

the period, and we anticipate achieving the upper end of our 2016 financial year guided range of R10 billion to R16 billion. The RP places Sasol in a strong position to operate profitably within a US\$45-50/b oil price environment. However, against the backdrop of a US\$30/b oil price, we updated and extended the scope of the RP to run through at least to the end of the 2018 financial year, ensuring continued balance sheet strength and earnings resilience at notably lower oil price scenarios. We also increased the cash savings target range from R30 billion to R50 billion to between R65 billion and R75 billion. Most of the benefits will be delivered from the existing RP work streams. In addition, we expect our sustainable cash cost savings to increase to R1,5 billion by the 2019 financial year, up R500 million from the previous guidance.

Our full time equivalent sustainable headcount reduction as a result of the BPEP amounts to approximately 9% or 3 100 employees through voluntary separations, voluntary early retirements and natural attrition, and nearly 23% or 13 000 service provider employees. Implementation of the RP has also resulted in headcount reductions, not all of which will be sustainable in the longer term, from organisational structure refinements and the freezing of non-critical vacancies. These reductions amount to approximately an additional 5,3% or 1 800 employees, which amounts to a total headcount reduction of 14,3% or 4 900 full time equivalents.

The increase in the effective corporate tax rate from 31,8% to 43,1% was mainly as a result of the R7,4 billion (CAD665 million) partial impairment of our Canadian shale gas assets, partly offset by the reversal of a provision of R2,3 billion (US\$166 million) based on a favourable ruling received from the Tax Appeal Tribunal in Nigeria relating to the EGTL Project. The normalised effective tax rate of 32,9% increased by 0,3% compared to the prior period. The approval of the Production Sharing Agreement (PSA) in Mozambique will have a positive impact on our effective tax rate; however, the amount will be dependent on the gas price. A lower gas price will result in fewer reserves being recognised and a decrease in future taxable income. The impact of the PSA Project will be confirmed in our year-end results, since the approval was only granted after the half year-end close.

Cash generated by operating activities decreased by 21% to R26,7 billion compared with R34,0 billion in the prior period. Despite reduced cash flows, our balance sheet has the capacity to lever up as we continue to execute our growth plans and return value to shareholders. To manage the volatility and a 'lower-for-much-longer' oil price environment, the Sasol Limited board of directors (Board) temporarily lifted our internal gearing ceiling to 44% until the end of the 2018 financial year.

Our assets and liabilities were significantly impacted by the weaker average rand/US dollar exchange rate, resulting in higher than expected translation differences. Actual capital expenditure during the period amounted to R33,6 billion. Loans raised during the period amounted to R19,2 billion, mainly for the funding of the Lake Charles Chemicals Project. Our net cash position increased by 15%, from R53 billion in June 2015 to R61 billion as at 31 December 2015, driven largely by our cash conservation initiatives and the favourable impact of the rand/US dollar translation effects.

Our dividend policy is a dividend cover range based on HEPS. Taking into account the current volatile macroeconomic environment, capital investment plans, our cash conservation initiative, the current strength of our balance sheet, and the dividend cover range, the Board has declared an interim dividend of R5,70 per share (18,6% lower compared to the prior period). The interim dividend cover was 4,3 times at 31 December 2015 (31 December 2014: 4,6 times).

**Strong operational performance supported by continued effective cost management**

***Operating Business Units***

***Mining – stable operations with cash unit costs below inflation***

Profit from operations increased by 5% to R2 359 million compared to the prior period, mainly as a result of meaningful contributions from the BPEP and RP levers, and stable mining operations. Normalised mining unit costs of production were contained to 4% below inflation. Export coal volumes remained flat and this market

continued to benefit from the weaker rand/US dollar exchange rate, which was partially negated by lower dollar-based coal prices.

Sasol Limited Interim financial results 2016

5

***Exploration and Production International – negatively impacted by low oil and gas prices***

Exploration and Production International (E&PI) recorded a loss from operations of R8 289 million compared to a loss from operations of R1 748 million in the prior period. Excluding the partial impairment of our Canadian shale gas operations of R7 436 million (CAD665 million), our E&PI businesses recorded a loss of R853 million.

Our Mozambican operations recorded a profit of R437 million compared to R930 million in the prior period. The decrease mainly relates to translation losses of R608 million. Production volumes increased by 8% as a result of our efforts to debottleneck the production facility, coupled with a full volume offtake by our joint electricity operations in Mozambique. The lower oil price had a significant impact on our Gabon assets resulting in a loss of R512 million compared to R1 144 million in the prior period, which included the partial impairment of the asset of R1 331 million. Oil production in Gabon was 26% higher than the prior period and averaged 19 100 barrels of oil per day.

Our Canadian shale gas assets generated a loss from operations of R7 769 million, including an impairment of R7 436 million. Excluding the effect of the impairment, the loss decreased to R333 million compared to R584 million in the prior period, mainly due to a lower depreciation rate. Our Canadian gas volumes were lower compared to the prior period due to reduced development activities, driven by lower oil and gas prices. Despite the impact of lower gas prices and weaker oil prices affecting the profitability of the business, E&PI were able to contribute more than R2,7 billion to Sasol's cash conservation initiatives during the current period through reduced capital cash flow, a cutback in exploration activities and increased cash fixed cost savings. As a result of the 'lower-for-much-longer' oil and gas prices, further cash conservation initiatives are being considered and will be communicated to the market once confirmed.

***Strategic Business Units***

***Energy – record production volumes and solid cost performance while margins under some pressure***

Profit from operations of R10 261 million decreased by R4 557 million or 31% compared to the prior period despite a 47% decrease in oil prices. Operating margins held firm at 31%, mainly as a result of record production levels, favourable product differentials and contributions from the BPEP and RP initiatives. Normalised cash fixed costs remained flat in nominal terms.

In Southern Africa, our Energy Strategic Business Unit's (SBU) profitability was enhanced by a 6% increase in refined product volumes from SSO and a 1% increase in production volumes from our Natreff operations compared with the prior period. A weaker rand/US dollar exchange rate and higher refining margins further mitigated the impact of the 47% decrease in oil prices for the period under review. Sales volumes, on the other hand, decreased by 1% on the back of difficult market and trading conditions experienced in December 2015, driven by lower demand for liquid fuels in Southern Africa. Lower working capital levels are forecast by the end of the 2016 financial year.

Gas sales were 3% higher compared to the prior period, mainly due to higher methane-rich gas sales to commercial customers. Our share of the Central Térmica de Ressano Garcia joint operation in Mozambique delivered 327 858 megawatt-hours of electricity.

The Energy SBU's share of profit from equity accounted investments of R409 million was R887 million or 68% lower than in the prior period. This was primarily due to lower oil prices for the period. The ORYX GTL plant achieved an average utilisation rate of 90%, while maintaining a world class safety RCR of 0,0. In Nigeria, the EGTL plant continues to steadily ramp up towards design capacity.

In light of the current economic environment, in February 2016, we decided to review our long-term strategic interest in the Uzbekistan GTL investment. The review is expected to be completed in the second half of the 2016 financial year.

***Base Chemicals – margin pressure partly relieved by a solid cost performance***

Profit from operations decreased by 45% to R3 178 million compared to the prior period and the operating margin decreased by 8% to 19%. Sales volumes were down by 13% as a result of an extended planned shutdown to enable commissioning activities associated with the C3 Expansion Project, as well as softer

Sasol Limited Interim financial results 2016

6

Sasol Limited Group

## Overview

(continued)

demand for certain commodity chemical products. A 23% decrease in our basket of commodity chemical prices was partly negated by the weaker rand/US dollar exchange rate. Cash fixed costs decreased by 11% in nominal terms, mainly as a result of significant benefits achieved from the BPEP and RP initiatives and a refinement of our cost transfer allocation methodology between SBUs.

### ***Performance Chemicals – normalised sales volumes flat coupled with resilient average gross margins***

Profit from operations of R5 161 million decreased by 30% compared to the prior period mainly as a result of the R1 336 million FTWEP impairment reversal in the prior period. Our operating margin was under pressure due to depreciation being recognised on FTWEP for the full period, while the project is still ramping up to full production. Profit from operations on a normalised basis decreased by 15%. This decrease is largely as a result of lower US ethylene prices which negatively impacted the profitability of our assets in the US. Our margins in the surfactant and alcohol business, however, remained very resilient when compared to the crude oil price over the same period. Production volumes in our Eurasian Operations increased by 5% while our US Operations reported a 12% decrease in production as a result of a planned shutdown. Total sales volumes decreased marginally by 1% compared to the prior period, as a result of reduced demand for oilfield chemicals and the planned shutdown at our ethylene plant in North America. Normalised cash fixed costs were maintained well below inflation as a result of BPEP and RP activities.

### **Advancing projects to enable future growth**

We are encouraged by the headway we are making in delivering on our project pipeline:

Focusing on our **Operating Business Units (OBUs)** which secure our feedstock supply:

–

The establishment of the Impumelelo and Shondoni collieries, which are part of our Mining OBU's R14,0 billion mine replacement programme, will ensure uninterrupted coal supply to SSO. The Impumelelo colliery achieved beneficial operation (BO) during October 2015, within budget, despite various project delays. The development of the Shondoni colliery continues to progress steadily and we expect to achieve BO, within budget, during the first half of the 2016 calendar year.

–

In January 2016, we obtained approval from the Mozambique Council of Ministers for a Field Development Plan that will see further hydrocarbon resources developed to support our Southern Africa growth drivers. The first phase of the PSA licence area development proposes an integrated oil, liquefied petroleum gas (LPG) and gas project adjacent to the Petroleum Production Agreement area. To expand our operations in Mozambique, we also received approval from the Government of Mozambique, in January 2016, to develop a fifth train at the Central Processing Facility to process additional gas from the PSA licence area. The total project cost for tranche one of the first phase of the PSA licence area and the fifth train is estimated at US\$1,4 billion.

Progressing our growth projects within our **Strategic Business Units (SBUs)**:

### **Expanding our asset base in South Africa**

–

The R14,2 billion Secunda growth programme is nearing completion with 17 of the 19 projects achieving BO. The completed projects ensured the full realisation of the envisaged volume and electricity benefits. The remaining two projects are smaller environmental enablers and are expected to reach BO during the first half of the 2016 calendar year.

–

The expansion of our wax facility in Sasolburg is progressing well, with phase one achieving BO during May 2015. BO for phase two is on track to take place during the first half of the 2017 calendar year. The

total project cost for both phases remains unchanged at R13,6 billion.

**Growing our interest in Mozambique**

—

The final investment decision was taken to progress with the R2,7 billion Loop Line 2 Project on the Mozambique to Secunda pipeline, during August 2015. This will increase gas transportation capacity from 169,4 bscf to 191 bscf. BO is expected to be reached during the second half of the 2016 calendar year.

Sasol Limited Interim financial results 2016

7

### **Growing our footprint in North America**

—

The Lake Charles Chemicals Project (LCCP) is progressing. The engineering and procurement are at an advanced stage and site construction, mostly civil related, has fully commenced. We had some initial challenges associated with ground work due to the very heavy rainfall in 2015 and the regulatory need to relocate a small waterway. Cost control remains a primary focus for the team. Given the uncertain economic environment, we have taken a decision to pace the execution of the LCCP to support the Response Plan. This shift in schedule will also give us the opportunity to further optimise field efficiency. Our current view is that BO of some smaller derivative units will move into calendar year 2019 and the overall end-of-job project cost estimate will remain under pressure. A detailed review of the project cost and schedule is underway and likely to be completed by mid-calendar year 2016.

—

Construction of our 50% joint venture high-density polyethylene plant with Ineos Olefins & Polymers USA continues to make good progress, and is on track for completion in the second half of the 2016 calendar year. Upon completion, the plant will be the largest HDPE manufacturing facility in the US and is expected to produce 470 kilotons annually. We continue to work with our joint venture partner to manage cost pressures as our initial estimates indicate a possible 5% to 10% increase to the original end-of-job cost.

—

In response to the lower gas market price, we have agreed with our partner, Progress Energy, to reduce drilling activities and capital expenditure in Canada. In terms of the annual work programme, we expect to spend CAD382 million in the next calendar year, of which CAD161 million relates to the carry obligation. Further evaluation is currently underway with the optimisation of the capital spend being considered.

### **Maintaining our focus on sustainable value creation**

We continued to deliver on our broader sustainability and community contributions during the period:

Safety remains a top priority for Sasol. Our operations continue to make steady progress in the reduction of process safety incidents. The safety incident RCR for employees and service providers globally, excluding illnesses, remained stable at 0,32 for the first six months of the year when compared to the previous year (0,32 as at 30 June 2015). As at 31 December 2015, our workforce worked 15 months without a fatality.

For the six months ended 31 December 2015, we paid R18,1 billion in direct and indirect taxes to the South African government. Sasol remains one of the largest corporate taxpayers in the country, contributing significantly to the local economy.

During the period, we invested R394 million in skills development and socio-economic development, which includes investments in our Ikusasa programme, bursaries, learnerships and artisan training programmes. As part of our commitment to the communities in which we operate, our Ikusasa programme focuses on education, health and wellbeing, infrastructure and safety and security in the Secunda and Sasolburg regions.

While we support the transition to a lower carbon economy, we are concerned that the proposed carbon tax does not address the structural issues that lie at the heart of the country's greenhouse gas intensity. The proposed design of the carbon tax creates substantial regulatory and investment uncertainty as there is insufficient clarity relating to the phases of the tax proposed in the draft carbon tax bill, especially post 2020. In our view, South Africa needs appropriate incentives to invest in new, more energy efficient processes and projects that will improve our energy security and maintain our global

competitiveness. Sasol continues to engage with the South African Government on the carbon tax issue.

Sasol Limited Interim financial results 2016

8

Sasol Limited Group

**Overview**

(continued)

To ensure our ongoing compliance with new air quality regulations in South Africa, Sasol applied for certain postponements to manage our short-term challenges relating to the compliance timeframes. We have received decisions on our postponement applications from the National Air Quality Officer, which, while aligned with our requests, imposed stretched targets in terms of our atmospheric emission licences. Our R2,8 billion abatement programme remains on track to achieve our targeted reductions of volatile organic compound emissions by 2020.

We continue to measure our comprehensive climate change response through our key performance indicators. For our South African operations, we are in the final stages of concluding carbon budgets which we will be required to support for the next five years. We continue to investigate and implement actions to further reduce our emissions.

Following the excellent utility energy efficiency improvement for our operations in South Africa in 2015, we have set the objective to sustain the same level of performance for the 2016 financial year, using the 2015 financial year performance as the new baseline. The Energy Intensity Index for our South African operations is slightly above target for the six months ended 31 December 2015, following the September 2015 planned shutdowns. Notwithstanding, we are confident that we will meet our 2016 target.

We view broad-based black economic empowerment (BBBEE) in South Africa as a business imperative and our commitment to transformation has seen us record strong BBBEE contributor status ratings. Our level 4 BBBEE contributor status is currently being evaluated and we expect this to decline after the Department of Trade and Industry's revised Codes of Good Practice came into effect during the 2015 financial year. We have embarked on a project to re-assess our BBBEE strategies and adhere to the new requirements.

In February 2016, we declared an interim dividend of R356 million to our BEE partner, Tshwarisano LFB Investment (Pty) Ltd, which holds a 25% shareholding in Sasol Oil (Pty) Ltd. We are proud to announce that, based on the attractive returns generated by Sasol Oil (Pty) Ltd, the debt relating to our BEE partner's equity shareholding has been settled. We remain committed to deliver sustainable returns to all our stakeholders.

**Competition law compliance**

On 5 June 2014, the South African Competition Tribunal (the Tribunal) released its decision relating to Sasol Polymers' pricing of propylene and polypropylene. In its decision, the Tribunal found against Sasol Polymers in relation to the pricing of both propylene and polypropylene, for the period in question. Sasol appealed the Tribunal's ruling to the Competition Appeal Court (CAC). On 17 June 2015, the CAC upheld Sasol's appeal and set aside the decision of the Tribunal. The Competition Commission sought leave to appeal the matter to the Constitutional Court, however, on 17 November 2015 the Constitutional Court refused such leave to appeal, bringing this matter to an end.

Separately, the Competition Commission is conducting investigations into some of the industries in which Sasol operates, including the petroleum and polymer industries, and has initiated a market inquiry in the South African LPG market. We continue to cooperate with the Competition Commission in these investigations. To the extent appropriate, further announcements will be made in future.

**Profit outlook\* – solid production performance and cost reductions to continue**

The current economic environment remains volatile and very uncertain. Our expectation is for ongoing moderate global growth, where growth in advanced economies mitigates the negative growth impact of some emerging markets and commodity exporting nations. Oil prices are currently subject to sentiment driven volatility and while some fundamentals indicate that the oil industry cycle is poised to turn, it remains difficult to determine when this will happen. The rand continues to face a number of depreciation risks, \* The financial information contained in this profit outlook is the responsibility of the directors and in accordance with standard practice, it is noted that this information has not been reviewed and reported on by the Company's auditors.

Sasol Limited Interim financial results 2016

9

including a relatively strong US dollar, weak domestic growth prospects, negative emerging market sentiment and policy uncertainty. As oil price and foreign exchange movements are outside our control, our focus remains firmly on managing factors within our control, including volume growth, cost optimisation, effective capital allocation and cash conservation.

We expect an overall strong production performance for the 2016 financial year, with:

Liquid fuels product volumes for the Energy SBU in Southern Africa to be approximately 60 million barrels;

Base Chemicals sales volumes to be lower than the prior year, with margins remaining under pressure;

Performance Chemicals sales volumes to be slightly lower than the prior year, with average margins for the business remaining resilient;

A lower average utilisation rate at ORYX GTL in Qatar of approximately 80% of nameplate capacity due to an extended statutory shutdown;

A higher average utilisation rate at EGTL in Nigeria due to a steady ramp up;

Normalised cash fixed costs to continue to trend below SA PPI;

The RP cash flow contribution to range between R10 billion and R16 billion;

BPEP cash cost savings to achieve an annual run rate of R4,3 billion by the end of the current financial year;

Capital expenditure of R74 billion for 2016 and R73 billion in 2017 as we progress with the execution of our growth plan and strategy. Capital estimates may change as a result of exchange rate volatility;

Our balance sheet gearing up to a level of between 20% and 30%;

Average Brent crude oil prices to remain between US\$25 and US\$40; and

Ongoing rand/US dollar volatility due to various factors, including the pending outcome of the credit review of the South African sovereign credit rating.

**Appointment of Joint-Chief Executive Officers and change in directors**

As previously announced, Mr David E. Constable will step down as President and Chief Executive Officer on 30 June 2016. On 11 December 2015, Sasol announced the appointment of Mr Bongani Nqwababa and Mr Stephen Cornell as Joint-Chief Executive Officers of the Company, and Mr Paul Victor as Chief Financial Officer and Executive Director, with effect from 1 July 2016. On 4 December 2015, Prof Jürgen Schrempp retired as a Director and Mr Henk Dijkgraaf was appointed as Lead Independent Director.

**Declaration of cash dividend number 73**

An interim gross cash dividend of South African 570,00 cents per ordinary share (31 December 2014 – 700,00 cents per ordinary share) has been declared for the six months ended 31 December 2015. The interim cash dividend is payable on the ordinary shares and the Sasol BEE ordinary shares. The Board is satisfied that the liquidity and solvency of the Company, as well as capital remaining after payment of the interim cash dividend is sufficient to support the current operations. The dividend has been declared out of retained earnings (income reserves). The South African dividend withholding tax rate is 15%. At the declaration date, there are 651 389 516 ordinary (including 8 809 886 treasury shares), 25 547 081 Sasol preferred ordinary

and 2 838 565 Sasol BEE ordinary shares in issue. The net dividend amount payable to shareholders who are not exempt from the dividend withholding tax, is 484,50 cents per share, while the dividend amount payable to shareholders who are exempt from dividend withholding tax is 570,00 cents per share.

The increase since 30 June 2015 is mainly due to translation and capital expenditure incurred on the construction of the

Lake Charles Chemicals Project. This was partly funded by the increase in long-term debt.

2 Includes cash restricted for use of R5,4 billion (December 2014 – R4,9 billion; June 2015 – R5,0 billion).

1

In addition to these costs, an additional R36 million (December 2014 – R108 million; June 2015 – R224 million) of internal

resources was allocated to the project, bringing the total spend for the period to R132 million (December 2014 – R1 473 million; June 2015 – R1 906 million).

2 December 2014 and June 2015 includes a share-based payment expense of R280 million relating to the partial refinancing

of the Sasol Inzalo transaction.

3 The increase in the effective tax rate was mainly due to the impairment of our Canadian shale gas assets (R7,4 billion),

partially offset by the reversal of the provision of R2,3 billion in respect of EGTL.

### **Basis of preparation**

The condensed consolidated interim financial statements for the six months ended 31 December 2015 have been prepared in accordance with International Financial Reporting Standards, IAS 34, *Interim Financial Reporting*, the SAICA Financial Reporting Guides as issued by the Accounting Practices Committee and Financial Pronouncements as issued by the Financial Reporting Standards Council and the requirements of the Companies Act of South Africa, 2008, as amended, and the Johannesburg Stock Exchange Listings Requirements.

The condensed consolidated interim financial statements do not include all the disclosure required for complete annual financial statements prepared in accordance with IFRS as issued by the International Accounting Standards Board. The condensed consolidated interim financial statements are prepared on a going concern basis. The Board is satisfied that the liquidity and solvency of the Company is sufficient to support the current operations for the next 12 months.

These condensed consolidated interim financial statements have been prepared in accordance with the historic cost convention except that certain items, including derivative instruments, liabilities for cash-settled share-based payment schemes, financial assets at fair value through profit or loss and available-for-sale financial assets, are stated at fair value.

The condensed consolidated interim financial statements are presented in South African rand, which is Sasol Limited's functional and presentation currency.

The condensed consolidated interim financial statements appearing in this announcement are the responsibility of the directors. The directors take full responsibility for the preparation of the condensed consolidated interim financial statements. Bongani Nqwababa CA(Z), Chief Financial Officer, is responsible for this set of condensed consolidated interim financial statements.

### **Accounting policies**

The accounting policies applied in the preparation of these summarised consolidated interim financial statements are in terms of IFRS and are consistent with those applied in the consolidated annual financial statements for the year ended 30 June 2015.

### **Related party transactions**

The group, in the ordinary course of business, entered into various sale and purchase transactions on an arm's length basis at market rates with related parties.

### **Significant events and transactions since 30 June 2015**

In accordance with IAS 34, *Interim Financial Reporting*, we have included an explanation of events and transactions which are significant to obtain an understanding of the changes in our financial position and performance since 30 June 2015 in the financial results overview.

Sasol Limited Group

## Significant Financial Instruments

### Fair value

*Valuation techniques and assumptions utilised for the purpose of calculating fair value*

Fair value is determined using valuation techniques as outlined below. Where possible, inputs are based on quoted prices and other market determined variables.

### Fair Value hierarchy

The following table is provided representing the significant financial instruments measured at fair value at reporting date, or for which fair value is disclosed at 31 December 2015. The US\$ bond and the interest rate swap were considered to be significant financial instruments for the group based on the amounts recognised in the statement of financial position and the fact that these instruments are traded in an active market. The calculation of fair value requires various inputs into the valuation methodologies used. The source of the inputs used affects the reliability and accuracy of the valuations. Significant inputs have been classified into the hierarchical levels in line with IFRS 13, as shown below:

Level 1

Quoted prices in active markets for identical assets or liabilities.

Level 2 Inputs other than quoted prices that are observable for the asset or liability (directly or indirectly).

**Independent auditor's review report on the condensed consolidated interim financial statements**

To the Shareholders of Sasol Limited

We have reviewed the condensed consolidated interim financial statements of Sasol Limited in the accompanying interim financial results, which comprise the condensed consolidated statement of financial position as at 31 December 2015 and the related condensed consolidated income statement and statements of comprehensive income, changes in equity and cash flows for the six months then ended, and selected explanatory notes.

**Directors' responsibility for the interim financial statements**

The directors are responsible for the preparation and presentation of these interim financial statements in accordance with the International Financial Reporting Standard, IAS 34, *Interim Financial Reporting* (IAS34), the SAICA Financial Reporting Guides as issued by the Accounting Practices Committee and Financial Pronouncements as issued by the Financial Reporting Standards Council and the requirements of the Companies Act of South Africa, and for such internal control as the directors determine is necessary to enable the preparation of interim financial statements that are free from material misstatement, whether due to fraud or error.

**Auditor's responsibility**

Our responsibility is to express a conclusion on these interim financial statements. We conducted our review in accordance with International Standard on Review Engagements 2410, *Review of Interim Financial Information Performed by the Independent Auditor of the Entity*. ISRE 2410 requires us to conclude whether anything has come to our attention that causes us to believe that the interim financial statements are not prepared in all material respects in accordance with the applicable financial reporting framework. This standard also requires us to comply with relevant ethical requirements.

A review of interim financial statements in accordance with ISRE 2410 is a limited assurance engagement. We perform procedures, primarily consisting of making inquiries of management and others within the entity, as appropriate, and applying analytical procedures, and evaluate the evidence obtained.

The procedures in a review are substantially less than and differ in nature from those performed in an audit conducted in accordance with International Standards on Auditing. Accordingly, we do not express an audit opinion on these interim financial statements.

**Conclusion**

Based on our review, nothing has come to our attention that causes us to believe that the accompanying condensed consolidated interim financial statements of Sasol Limited for the six months ended 31 December 2015 are not prepared, in all material respects, in accordance with the International Financial Reporting Standard, IAS 34, *Interim Financial Reporting*, the SAICA Financial Reporting Guides as issued by the Accounting Practices Committee and Financial Pronouncements as issued by the Financial Reporting Standards Council and the requirements of the Companies Act of South Africa.

**Other matter**

We have not reviewed future financial performance and expectations, production and sales volumes, selected ratios, share statistics, other non-financial information and information not required by IAS 34 expressed by the directors in the accompanying interim financial results and accordingly do not express a conclusion thereon.

**Disclaimer – Forward-looking statements:** Sasol may, in this document, make certain statements that are not historical facts and relate to analyses and other information which are based on forecasts of future results and estimates of amounts not yet determinable. These statements may also relate to our future prospects, developments and business strategies. Examples of such forward-looking statements include, but are not limited to, statements regarding exchange rate fluctuations, volume growth, increases in market share, total shareholder return, executing our growth projects and cost reductions, including in connection with our BPEP and RP. Words such as “believe”, “anticipate”, “expect”, “intend”, “seek”, “will”, “plan”, “could”, “may”, “endeavour”, “target”, “forecast” and “project” and similar expressions are intended to identify such forward-looking statements, but are not the exclusive means of identifying such statements. By their very nature, forward-looking statements involve inherent risks and uncertainties, both general and specific, and there are risks that the predictions, forecasts, projections and other forward-looking statements will not be achieved. If one or more of these risks materialise, or should underlying assumptions prove incorrect, our actual results may differ materially from those anticipated. You should understand that a number of important factors could cause actual results to differ materially from the plans, objectives, expectations, estimates and intentions expressed in such forward-looking statements. These factors are discussed more fully in our most recent annual report on Form 20-F filed on 9 October 2015 and in other filings with the United States Securities and Exchange Commission. The list of factors discussed therein is not exhaustive; when relying on forward-looking statements to make investment decisions, you should carefully consider both these factors and other uncertainties and events. Forward-looking statements apply only as of the date on which they are made, and we do not undertake any obligation to update or revise any of them, whether as a result of new information, future events or otherwise.

**Please note:** A billion is defined as one thousand million. All references to years refer to the financial year ended 30 June. Any reference to a calendar year is prefaced by the word “calendar”.
