

CORE MOLDING TECHNOLOGIES INC  
 Form 4  
 July 19, 2013

**FORM 4**

UNITED STATES SECURITIES AND EXCHANGE COMMISSION  
 Washington, D.C. 20549

OMB APPROVAL

OMB Number: 3235-0287  
 Expires: January 31, 2005  
 Estimated average burden hours per response... 0.5

Check this box if no longer subject to Section 16. Form 4 or Form 5 obligations may continue. See Instruction 1(b).

**STATEMENT OF CHANGES IN BENEFICIAL OWNERSHIP OF SECURITIES**

Filed pursuant to Section 16(a) of the Securities Exchange Act of 1934, Section 17(a) of the Public Utility Holding Company Act of 1935 or Section 30(h) of the Investment Company Act of 1940

(Print or Type Responses)

## Explanation of Responses:

- \* If the form is filed by more than one reporting person, see Instruction 4(b)(v).
- \*\* Intentional misstatements or omissions of facts constitute Federal Criminal Violations. See 18 U.S.C. 1001 and 15 U.S.C. 78ff(a).
- (1) Represents shares of restricted stock withheld to satisfy the executive's tax withholding obligation upon vesting of restricted stock. The deemed disposition of the withheld shares is exempt pursuant to Rule 16b-3(e).

Note: File three copies of this Form, one of which must be manually signed. If space is insufficient, see Instruction 6 for procedure. Potential persons who are to respond to the collection of information contained in this form are not required to respond unless the form displays a currently valid OMB number. 18 stem cell to 10 thousand, then at the age of 50 it is already one to half a million and at the age of 70, one to a million of the hematopoietic cells. See generally Christopher Potten and James Wilson, Apoptosis: the Life and Death of Cells, Cambridge University Press (2004). The isolation process of stem cells for medical purposes is the most expensive part of modern biotechnology for stem cells. Today there have been effective methods worked out for the isolation of stem cells from an embryo, fetus and umbilical cord blood (the rest of the blood in an umbilical cord and placenta after delivery). Modern technology allows for the preparation of these cells for the treatment of many diseases. The Company believes that the most promising way to create this individualized medication, which could be used in the case of disease or the loss of any organ, is to keep stem cells in a frozen condition, collecting the rest of the umbilical cord blood during a birth and using preparations created on their basis. Upon introduction into the organism of a patient, stem cells find the struck organs, the so-called target organs, where they migrate and provide powerful restoration of whole biological structures, normalize the metabolism, harmonize the immune status of an organism, and make active antineoplastic factors (compounds that prevent the growth and development of malignant cells). This way cell suspension introduction results in the increase of the number of

leukocytes (white blood cells) in ontological patients with chemo rays depression of hemopoiesis (the formation of blood cells in the body) from 2 to 5 thousand for two weeks. Stem cells actively perform their main responsibility - they replace the sick and old cells of an aging organism rejuvenating it, which cannot be done by any other medicine. Also, highly active regulating factors are present within the cells suspension which exist and work only during an embryonic period of the organism's development. That is why the cells suspension introduction in the adult organism and engraftment of stem cells among the aging and pathologically altered cells of this organism creates a unique situation when the most powerful development, renewal and functions' ensuring factors that only exist start constantly influencing the cells and organs of the adult organism. These biological preparations in their complex state influence: - normalization and stimulation of the metabolism - rise in the activity of the immune and neuro-endocrinal systems - strongly marked antineoplastic action; - delay pre-senility, dynamically rejuvenating the organism - strongly marked medical effects upon diversified pathologies In the Ukraine the study and production of biological preparations from the animal and human cells were being carried out within the framework of the scientific programs under the aegis of the National Academy of Sciences, Medical Academy of Sciences, Ministry of Public Health, Coordination Center of the organs, tissues, and cells transplantation of the Ministry of Public Health of Ukraine. The application of allo (human) biological preparations have been allowed by the Ministry of Public Health of Ukraine since 1991. Cryopreservation The ICT Lab in Kiev has developed and received a number of patents for the preparation, cryo-preservation and the thawing process for biological material which results in a 99% survival rate of the original biological mass. It is a unique process developed by ICT. Long-term methods of storage have been used in medical practice for a long time. Among those commonly famous methods of storage there is lyophilization (freeze-drying), treatment by alcohol or formalin solutions and some others. But the basic drawback of such methods of storage is dehydration of protein compounds which cause cells and tissues to completely lose their main biological features - ability to function after transfusion. Nowadays, low temperatures are the only way to allow for the storage of cells and tissues for long time intervals (running for years) in a viable condition. Storage in liquid nitrogen at the temperature of -196 C is the basic method of the long-term storage of biological objects today. The development of personal modern technologies of cryogenic-preservation, corresponding to world standards as well as observing the demands of producing biological preparations, their testing, marking and storing in accordance with statements of the European Tissue Banks Association, allowed ICT to create high-quality cryogenically-preserved embryonic stem cells, tissue preparations and extracts for clinical application and system of examination and treatment of patients with minimum risk and maximum effect with the most diversified pathologies. 19 Quality Control The efficiency of stem cell therapy is ensured through the latest special methods of bacteriological and virological control which guarantee the highest quality of preparations. Every preparation prepared for use is supplied with its own certificate containing test results which certify the safety of this biological preparation. The patient's safety assurance totally corresponds with international Standards of Activity of the European and American Tissue Banks Association. The Company warrants that a batch of allo stem cell biological solution for transplants are individually prepared for a specific patient have been manufactured in accordance with and in strict compliance with Good Manufacturing Practice ("GMP"), and following the regulations of the U. S. Food and Drug Administration (the "FDA") as well as the respective regulatory agencies of the European Union. GMP is a set of guidelines established by the FDA regarding the production or manufacture of any drug or biological products. The FDA certifies and enforces US manufacturers that comply with the GMP standards. Although the Company is not GMP certified or GMP enforceable since its manufacturing facilities are located outside of the U.S., we have voluntarily complied with all GMP standards. More information on GMP standards is available at [www.gmp-online-consultancy.com](http://www.gmp-online-consultancy.com). The Company follows all steps recommended by the FDA and the respective counterpart regulatory agencies of the EU. We have put into practice all of these recommendations to aid and assure top quality preparations of each allo stem cell biological solution therapy batch. In addition, many other specimens, samples of each stem cell transplant(s) prepared by the Company are kept in liquid nitrogen at its laboratories, pursuant to FDA regulations. RESEARCH AND DEVELOPMENT We do not directly engage in Research and Development. Instead, we rely on the technology that results from Research and Development activities performed through contractual arrangements and possibly the technology that results from such arrangements in the future. ICT currently has a number of related projects that are currently under development or contemplated for the near future. They are as follows: 1. ARTIFICIAL ORGANS: Stem cell transplants prepared by our method of primary cell culture are used with a bio-polymer base to produce artificial organs. All stem cell transplants could be turned into an artificial organ (individual specific organs that are grown outside of the human

body). This project is still in the planning stage, and ICT has yet to substantially commence this project. 2. BIOLOGICALLY ENHANCED BIO-POLYMER MATERIALS FOR SURGERY: - Bio-degradable bio-polymers used together with an osteogenetic (bone-producing) combination of stem cell transplants. - Foam hydro gel used together with a chondrogenetic (cartilage-producing) combination of stem cell transplants. - Foam hydro gel used together with a soft tissue combination of stem cell transplants. This project is still in the planning stage, and ICT has yet to substantially commence this project 3. TOPOLOGICAL STEM CELL TRANSPLANTS FOR BURN VICTIM PATIENTS AND COSMETIC SURGERY. Stem cells are transplanted topologically (outside the skin) onto burn victims and other cosmetic surgery patients. This project has already been developed and tested on one burn patient, as described and illustrated above in the section entitled "Illustrations of Stem Cells and How They Work." We have filed one provisional patent in the United States for the use of this stem cell-based topological cream. MARKETING AND PROMOTION The Company intends to offer the Clients a compelling proposition with the potential to be quite valuable for many patients with degenerative conditions: our product offers a potential solution when all traditional medical options have been exhausted. The Company seeks to increase the number of Clients that make a purchase, to encourage repeat visits and purchases and to extend Client retention. Loyal, satisfied Clients also generate word-of-mouth advertising and awareness, and are able to reach thousands of other Clients and potential Clients because of the reach of on-line communication. The Company plans to employ a variety of media, program and product development, business development and promotional 20 activities to achieve these goals. We put out periodic Press Releases on our activities that are distributed by MacReport to numerous on-line publication sites as well as printed magazines, newspapers and newsletters. In addition, we have an on-line distribution network that sends these releases to subscribed potential patients, medical practitioners, patient networks and associations (such as the StrokeNetwork, Different Strokes, and Multiple Sclerosis Society). Finally, by invitation of these same organizations, we have participated in various on-line "chat" seminars organized by these organizations to help educate and answer questions on stem cell transplantation therapy. Our marketing strategy will emphasize some basic directives to keep us focused on our business model. The Plan and its implementation are described below: - The Company's clinics will be used as labs to develop the stem cell transplantation therapies, be a training facility for other doctors and a base for our Tele-Medicine and web based Support Application. - Our goal is to cause the medical practitioners and clinics to network together and propose stem cell transplantation to their patients as an alternative regenerative medical procedure. We plan to achieve this goal by continuing to develop the information available on our online distribution network, by participating in further online seminars, and by any other means at our disposal to increase awareness of stem cell therapy as an alternative to traditional medicine. - A related goal is to spread awareness of stem cell therapy to patients. Many of our future patients may be totally unaware of the existence of stem cell transplantation as a treatment and its many benefits. Many of them are desperately seeking alternative treatment for their diseases, or have already given up hope, as modern medicine failed them. Many have formed groups or joined organizations, which are seeking help. Many are looking for anti-aging therapies and need to be aware of the advantages of stem cell transplantation in this context. All of our efforts outlined in this section are intended to achieve this goal. - Our marketing team will establish contact with existing patient organizations. This direct marketing approach will be done on a country-by-country basis, starting with Germany, which will be a springboard into Europe and other countries, especially the United States. There is currently no set plan as to which countries our team will establish our marketing efforts in first. We will consider each country, region, or particular organization and make an individualized determination as to where our marketing efforts should focus after establishing the marketing team in Germany. - Our marketing team will work directly with local specialists, ensuring an efficient and rapid introduction in each country. Our team will develop a marketing plan on a case-by-case basis, tailored to the particular culture, demand, and laws of each country or region. - Our website is connected to various internet search engines in order to maximize exposure. - In conjunction with accredited specialists in Information Technology, we will set up a complete across-the-board computer-controlled logistics data bank system. This system will be based in our affiliated clinics. It will cover the steps of the process from order through manufacture, delivery and treatment, concluding with follow-up records, always assuring patient privacy. Patients and physicians will also be able to trace the procedure of timing and shipping for their own preparations on the Internet. Doctor and Clinic Support Services The Company believes that a key objective is an ability to establish and maintain long-term relationships with its doctors and clinics throughout the world. The Company's planned team of customer support and service personnel will be responsible for handling the education and training of doctors on our Stem Cell Transplantation therapies and procedures. Doctor and clinic

inquiries and support will be addressed as part our global operations. The Company plans to offer "Toll Free" phone numbers and through our website a Physician or patient can research available therapies and how to contact us. The Company plans to automate certain tools used by its Customer Support and Service staff and intends to actively pursue enhancements to and further automation of its Customer Support, Service and Operations. PRICING Our stem preparations are priced competitively with others in our industry, reflecting pricing which has been the same as it has been in Germany for the past approximate 10 years. The complex approach to stem cell transplantation is based upon cleansing and detoxification and balancing of all metabolic processes, whereby the patient will be prepared to accept the stem transplants for their maximum healing effects. 21 COMPETITION We are unaware of any competitor that has the same business model in the manufacturing process and cryo-preservation process of allo stem cell biological solution and other products. To our knowledge, these procedures have only been used by our affiliates. Further, we are unaware of any competitor engaged in the business of providing educational, informational, and referral services to potential candidates for stem cell therapy. Although we have not noted any Companies that offer an identical array of services, there are several stem cell companies that compete with us on an individual service level. First, there are the stem cell research and development companies that are only doing scientific work with stem cells, but are not in the business of treating patients. Second, there are companies that have their own treatment facilities and their own source of stem cells. Third, there are the companies that supply the stem cells for research and treatment of patients. The Company's business model is not just to provide a referral service, but to combine all aspects of the above mentioned areas in order to provide value-added services to our patients with a minimum operating investment by the Company. We plan to accomplish this by continuing to enter into various licensing and treatment agreements with affiliate clinics and hospitals. We will select which clinic and hospital facility we contract with based on the resources available, IP and services that they each have available. This will allow us to be able to have a number of global affiliate treatment facilities that, when combined, provide the Company with all of the following value-added services: - Review and analysis of patient medical information - Recommendation of treatment protocols - Treatment of patients at multiple international locations - Provide the stem cell biological solution to be used at our affiliate treatment facilities - Provide long-term tracking of patient's medical condition for data collection and medical abstract development There is no assurance that the Company will be able to compete successfully against any such current and any developing future competitors, and competitive pressures faced by the Company may have a material adverse effect on the Company's business, prospects, financial condition and results of operations. Further, as a strategic response to changes in the competitive environment, the Company may from time to time make certain pricing, service or marketing decisions or acquisitions that could have a material adverse effect on its business, prospects, financial condition and results of operations. New technologies and the expansion of existing technologies may increase the competitive pressures on the Company. In our research, the closest competitor that we have to our business model is a company called VesCell ([www.vescell.com](http://www.vescell.com)). This company has licensed a proprietary technology from their partner TheraVita that uses the patients own blood to draw out the stem cells which are then culture grown and are then used as an injection back into the patient. VesCell has a number of affiliate treatment facilities which are located in Thailand and Singapore where these procedures are performed. VesCell also has a number of treating physicians at each affiliate hospital or clinic facility that actually perform the stem cell transplantation procedure. The cost of the VesCell therapy is \$34,500, USD, per treatment. Currently, the Company has three affiliate treatment facilities outside of the United States: Kiev, Ukraine, Shenzhen, China and Tijuana, Mexico. As part of our business model, we will continue to add and at times, remove, affiliate treatment facilities that we do business with as per the needs of the Company. REGULATION As the technological milestones for stem cell transplantation have been announced, governments have begun to impose regulation. Many developed countries have now drawn up legislation or codes, or signed up to Conventions, regulating the creation and use of embryonic stem cells. Some regimes have already been shown to be lagging behind the technology. From a regulatory viewpoint stem cell transplant represents a very unique product, which really is not really a "product" at all, because it does not fulfill the legal definition of a medicinal "product." The FDA's regulations label live cell transplants as products, while under German law they are classified neither as drugs nor as medications, because: - they are individually prepared for each patient, - they are for one time use only, by implantation on a pre-determined date, - the implantation is carried out by a physician who wrote a prescription for the stem cell transplants used, 22 - stem cell transplants have no 'shelf-life', and - they are not distributed through the usual channels. The response of many governments to reproductive cloning is a complete ban, but approaches to therapeutic cloning vary quite widely. The United States presidency and various European bodies

and institutions are taking a restrictive approach to embryonic stem cells, while the United Kingdom has passed relatively permissive legislation. The United States' regulation falls into two main areas: control of federal funds for research, and the broader question of regulation of the activities themselves. Following an announcement by President Bush on August 9, 2001, United States federal funds became available only for stem cell research on embryonic cell lines already in existence. Before that, more liberal National Institutes of Health ("NIH") Guidelines had recommended that funds were to be available for the creation and use of stem cells from spare IVF embryos. The 64 embryonic cell lines identified by US officials as already being in existence, and therefore a suitable subject for federally funded research, were generated by various institutes in the United States, Sweden, Australia, India, and Israel. We currently plan to seek research funding from the NIH, and will consider seeking research funding from other government health agencies in the future. Separately from the funding issue, the regulation of embryonic stem cell research is being actively considered by the US Government. On July 31, 2001, the House of Representatives voted for a broad ban on human cloning that would prohibit cloning for research purposes as well as for reproduction. The resulting law imposes heavy financial penalties and terms of imprisonment on those who generate cloned embryos, and thus affects both privately funded and NIH-supported research. Fortunately, the Company's lines of allo transplants are outside of this regulation, both because we do not engage in any cloning activities, and because we do not engage in any stem cell production, research, or development in the United States. Further, since all of our stem cell activities are performed in jurisdictions where such activities are legal, we do not currently have any obligation to obtain government approval for our activities, and do not currently have any compliance costs. However, there is no assurance that we will not face costs or the need for government approval with regard to future regulations or the regulations of any country into which we may expand our operations in the future. Germany and the Rest of Europe Germany's highest court re-affirmed its approval of therapeutic use of cell allo transplantation on February 16, 2000, by its decision in the case number 1 BvR 420/97. Germany had previously approved of this use in the early fifties. This German decision had serious implication for the remainder of the European Community ("EC") as well. Under the European Community Council Directives, all Member States of EC are obliged to accept laws and regulations of other member States of European Community dealing with medical therapeutics for human use, and that includes stem cell transplantation. All applicable regulations of the Public Health Service, and EU Directives, were incorporated in our manufacturing technology, and that was of enormous importance in order to attain the heretofore unknown 'state-of-art' level of safety of stem cell transplantation. The European Community Council's Directives are in harmony with this German legal concept, and thus European Community Member States do not classify stem cell allo and/or xeno-transplants as 'products' either. **INTELLECTUAL PROPERTY** Currently, we have the rights to 26 patents, filed in the Ukraine and other countries, pursuant to our License Agreement with ICT. These patents concern the production, storage, preservation, and practical application of stem cells. We currently have three patent pending filings in the US: - U.S. P&T Office Patent Pending filed February 27, 2007; U.S. 11/712,535. "STEM CELLS TO TREAT AND/OR PREVENT SYMPTOMS OF AVIAN INFLUENZA AND OTHER DISEASES IN MAMALS AND OTHER ANIMALS" - U.S. P&T Office Patent Pending filed April 5, 2007; U.S. 11/732,985. "COMPOSITION AND METHODS OF TREATING BURN VICTIMS USING STEM CELLS." - U.S. P&T Office Patent Pending filed February 26, 2007; U.S. 11/710,817. "DIFFERENTIATION OF CORD BLOOD INTO 23 NEURAL CELLS AND METHOD TO TREAT PATIENTS WITH NEUROLOGICAL CONDITIONS WITHOUT USING IMMUNE SUPPRESSION AGENT." The Company is pursuing the registration of its trademark and service mark in the U.S. and internationally, and has applied for the registration of its "Cells For Life" trademark in China and the US. Effective Patent, trademark, service mark, copyright and trade secret protection may not be available in every country in which the Company's products and services are made available. There is no assurance that the steps taken by the Company to protect its proprietary rights will be adequate or that third parties will not infringe or misappropriate the Company's copyrights, trademarks, trade dress and similar proprietary rights. In addition, there is no assurance that other parties will not assert infringement claims against the Company. **EMPLOYEES** As of March 31, 2007, the Company employed 2 full-time employees, and one part-time employee. The Company also engages independent contractors and other temporary employees in its operations and finance and administration departments. None of the Company's employees is represented by a labor union, and the Company considers its employee relations to be good. Competition for qualified personnel in the Company's industry is intense, particularly among Doctors and other technical staff. The Company believes that its future success will depend in part on its continued ability to attract, hire and retain qualified personnel. **RISK**

FACTORS THE FOLLOWING RISK FACTORS SHOULD BE CONSIDERED CAREFULLY IN EVALUATING THE COMPANY, ITS BUSINESS, CONDITION AND PROSPECTS (FINANCIAL AND OTHERWISE). THESE RISK FACTORS ARE NOT NECESSARILY EXHAUSTIVE AND ADDITIONAL RISK FACTORS, IF ANY, MAY BE MATERIAL OR HAVE SIGNIFICANCE TO AN INDIVIDUAL INVESTOR. MANY INVESTMENT OPPORTUNITIES INVOLVE RISK FACTORS OR A RISK OF LOSS AND THE EXISTENCE OF THE NORMAL AND CERTAIN EXTRAORDINARY RISKS. USE OF FORWARD-LOOKING LANGUAGE; FORECASTS UNRELIABLE: All statements, trend analysis and other information contained in this document relative to markets for the Company's products and trends in net sales, gross margin and anticipated expense levels, as well as other statements including words such as "anticipate," "believe," "plan," "estimate," "expect" and "intend" and other similar expressions, constitute forward-looking statements. These forward-looking statements are subject to business and economic risks, and the Company's actual results of operations may differ materially from those contained in the forward-looking statements. LIMITED OPERATING HISTORY; ACCUMULATED DEFICIT; ANTICIPATED LOSSES: The Company commenced operations upon execution of a Licensing Agreement with Institute of Cell Therapy (ICT). Accordingly, the Company has a limited operating history on which to base an evaluation of its business and prospects. The Company's prospects must be considered in light of the risks, expenses and difficulties frequently encountered by companies in their early stage of development. Nonetheless, there is no assurance that the Company will be successful in addressing such risks, and the failure to do so could have a material adverse effect on the Company's business, prospects, financial condition and results of operations. UNPREDICTABILITY OF FUTURE REVENUES; POTENTIAL FLUCTUATIONS IN QUARTERLY OPERATING RESULTS; SEASONALITY: As a result of the Company's limited operating history and the emerging nature of the biotechnological markets in which it competes, the Company is unable to accurately forecast its revenues. The Company's current and future expense levels are based largely on its investment plans and estimates of future revenues and are to a large extent fixed and expected to increase. Sales and operating results generally depend on the volume of, timing of and ability to fulfill the number of orders received for the biological solution and the number of patients treated which are difficult to forecast. The Company may be unable to adjust spending in a timely manner to compensate for any unexpected revenue shortfall. Accordingly, any significant shortfall in revenues in relation to the Company's planned expenditures would have an immediate adverse effect on the Company's business, prospects, financial condition and results of operations. Further, as a strategic response to changes in the competitive environment, the Company may from time to time make certain pricing, service or marketing decisions which could have a material adverse effect on its business, prospects, financial condition and results of operations. 24 The Company expects to experience significant fluctuations in its future quarterly operating results due to a variety of factors, many of which are outside the Company's control. Factors that may adversely affect the Company's quarterly operating results include (i) the Company's ability to retain existing patients, attract new patients at a steady rate and maintain patient satisfaction, (ii) the Company's ability to manage its production facility and maintain gross margins, (iii) the announcement or introduction of new treatments and/or patents by the Company and its competitors, (iv) price competition or higher prices in the industry, (v) the level of use of the Internet and on-line patient services, (vi) the Company's ability to upgrade and develop its systems and infrastructure and attract new personnel in a timely and effective manner, (vii) the level of traffic on the Company's website, (viii) technical difficulties, system downtime, (ix) the amount and timing of operating costs and capital expenditures relating to expansion of the Company's business, operations and infrastructure, (x) governmental regulation, and (xi) general economic conditions. MANAGEMENT OF POTENTIAL GROWTH: LIMITED SENIOR MANAGEMENT RESOURCES: While we cannot be sure we will be successful in growing the Company's operations, our goal is to rapidly and significantly expand our operations to address potential growth and market opportunities. We intend to seek to accomplish this by adding additional affiliate clinics, and by our marketing efforts. By adding affiliates, our intention is to seek to not only increase the number of patients that can be treated, but increase the visibility of stem cell therapy in general. We believe that the combination of word of mouth and our marketing efforts may lead to a significant growth in demand for our products and services. This expansion if successful could place a significant strain on the Company's management, operational and financial resources. The Company may be required to hire new employees including senior management, key managerial, technical and operations personnel who would have to be fully integrated into the Company, operational and financial systems, procedures and controls, and to expand, train and manage its already growing employee base. The Company also would be required to add finance, administrative and operations staff.

Further, the Company's management would be required to maintain and expand its relationships with Affiliate Treatment Clinics and Medical Facilities, University Labs, Private Labs and Treating Physicians globally. If we grow rapidly, there is no assurance that the Company's planned personnel, systems, procedures and controls would be adequate to support the Company's future operations, that the management would be able to hire, train, retain, motivate and manage required personnel or that Company management would be able to successfully identify, manage and exploit existing and potential market opportunities. If the Company is unable to manage growth effectively, its business, prospects, financial condition and results of operations will be materially adversely affected.

**DEPENDENCE ON KEY PERSONNEL; NEED FOR ADDITIONAL PERSONNEL:** The Company's performance is substantially dependent on the continued services and on the performance of its senior management and other key personnel, particularly the Company's Chairman/CEO, Calvin C. Cao, and Chief Financial Officer, Daniel J. Sullivan. The Company's performance also depends on the Company's ability to employ, retain and motivate its other officers and key employees. The loss of the services of any of its executive officers or future key employees could have a material adverse effect on the Company's business, prospects, financial condition and results of operations. The Company is currently negotiating long-term employment agreements with its executive officers and intends to obtain "key person" life insurance policies. The Company's future success also depends on its ability to identify, attract, hire, train, retain and motivate other highly skilled doctors, scientists, qualified PhD's, technical, managerial, marketing and customer service personnel. Competition for such personnel is intense, and there is no assurance that the Company will be able to successfully attract, assimilate or retain sufficiently qualified personnel. The failure to retain and attract the necessary doctors, scientists, qualified PhD's, technical, managerial, marketing and customer service personnel could have a material adverse effect on the Company's business, prospects, financial condition and results of operations.

**COMPETITION:** While we are presently unaware of any competitor that has the same business model in the manufacturing process and cryo-preservation process of allo stem cell biological solution and other products, competitors may already exist or may develop with respect to our specific business model. Although we have not noted any Companies that offer an identical array of services, there are several stem cell companies that compete with us on an individual service level. First, there are the stem cell research and development companies that are only doing scientific work with stem cells, but are not in the business of treating patients. Second, there are companies that have their own treatment facilities and their own source of stem cells. Third, there are the companies that supply the stem cells for research and treatment of patients. 25 There is no assurance that the Company will be able to compete successfully against any such current and any developing future competitors, and competitive pressures faced by the Company may have a material adverse effect on the Company's business, prospects, financial condition and results of operations. Further, as a strategic response to changes in the competitive environment, the Company may from time to time make certain pricing, service or marketing decisions or acquisitions that could have a material adverse effect on its business, prospects, financial condition and results of operations. New technologies and the expansion of existing technologies may increase the competitive pressures on the Company.

**TRADEMARKS AND PROPRIETARY RIGHTS:** The Company regards its copyrights, service marks, trademarks, trade dress, trade secrets and similar intellectual property as important, and critical to its success. In addition, certain aspects of trademark and copyright law, trade secret protection and confidentiality and/or license agreements with its employees may be relied upon to protect its proprietary rights. The Company is pursuing the registration of its trademarks and service marks in the U.S. and internationally, and has applied for the registration of certain of its trademarks and service marks. Effective trademark, service mark, copyright and trade secret protection may not be available in every country. The Company expects that it may license in the future certain parts of its proprietary rights, such as trademarks or copyrighted material, to third parties. There is no assurance that the steps taken by the Company to protect its proprietary rights will be adequate or that third parties will not infringe or misappropriate the Company's copyrights, trademarks, trade dress and similar proprietary rights. In addition, there is no assurance that other parties will not assert infringement claims against the Company. The Company is not currently aware of any legal proceedings pending against it.

**GOVERNMENTAL REGULATION AND LEGAL UNCERTAINTIES:** The Company is subject to regulation by domestic and foreign governmental agencies with respect to many aspects of stem cell transplantation. In addition, new legislation or regulation could occur. Any such new legislation or regulation, the application of laws and regulations from jurisdictions whose laws do not currently apply to the Company's business, or the application of existing laws and regulations to stem cell transplantation technology could have a material adverse effect on the Company's business, prospects, financial condition and results or operations.

**CONTROL OF THE COMPANY:** The

Company's founders; Mr. Calvin Cao, Global Capital Corp, together with Institute of Cell Therapy and the balance of the Company's management, hold at least 51% percent of the outstanding voting power of the Company. As a result, the founders and management will be able to (i) elect, or defeat the election of, any of the Company's directors, (ii) amend or prevent amendment of the Company's Restated Articles of Incorporation or Bylaws, or (iii) affect or prevent a merger, sale of assets or other corporate transaction. The extent of ownership by the founders and the management may have the effect of preventing a change in control of the Company or discouraging a potential acquirer from making a tender offer or otherwise attempting to obtain control of the Company, which in turn could have an adverse effect on the market price of the Common Stock. **NO ASSURANCE OF PUBLIC MARKET FOR COMMON STOCK, POSSIBLE LACK OF MARKET MAKERS; VOLATILITY.** Although the Company's stock is currently quoted on the Over-the-Counter Bulletin Board, there is no assurance that a public trading market will continue or develop for the Common Stock. There is also no assurance that the existing trading or any such future market will be characterized as active. Development of an active trading market for the Company's Common Stock may depend upon the interest of securities market makers and the investing public which may depend in turn on the Company's revenues and profits. The prices of securities of companies which are in limited supply in the public securities markets, which could describe the Company, are typically volatile. **POSSIBLE NEGATIVE EFFECT OF COMMON STOCK AVAILABLE FOR FUTURE SALE:** A substantial component of the Common Stock issued by the Company is "restricted stock" as defined in SEC Rule 144, promulgated under the Securities Act of 1933. The offer of a significant number of restricted shares of Common Stock in the future in the public market, at or about the same time pursuant to Rule 144 or pursuant to a subsequent registration statement under the Securities Act of 1933 could have a depressive effect on the public market price of the Company's common stock. **TRADING LIMITATIONS ON STOCK AT A MARKET PRICE OF LESS THAN \$5.00 PER SHARE:** Management cannot predict the market price of the Common Stock in the public market. At any time that the market price is less than \$5.00 per share, certain larger stock brokerage firms may prohibit purchase or sale of the Shares within their clients' accounts. 26 All securities brokerage firms effecting purchase orders for clients in the Company's common stock at a time when the common stock has a market bid price of less than \$5.00 per share are required by federal law to send a standardized notice to such clients regarding the risks of investing in "penny stocks", to provide additional bid, ask and broker compensation and other information to the stockholders and to make a written determination that the Company's common stock is a suitable investment for the client and receive the client's written agreement to the transaction, unless the client is an established client of the firm, prior to effecting a transaction for the client. These business practices may inhibit the development of a public trading market for the Company's common stock during periods that the price of the common stock in the public market is less than \$5.00 by both limiting the number of brokerage firms which may participate in the market and increasing the difficulty in selling the Company's common stock. **LOSS OF FINANCING.** We cannot guarantee that additional financing will be available to us when needed or, if available, that it can be obtained on commercially reasonable terms. Even if we are able to expand our business, we cannot provide certainty that we will be successful or that investors will derive a profit from an investment in our equity. **ITEM 2. DESCRIPTION OF PROPERTY** We lease office space and office equipment under an operating lease on a month-to-month basis. We lease the executive office suite from Wilder Corporation for approximately \$1,775.61. Our office is located at 2203 N. Lois Avenue, Suite #901, Tampa, FL 33607. The office is approximately three hundred seventy-four (374) square feet and is in a condition adequate to our needs. The terms of the lease agreement require 30 days written notice to terminate the lease. Rent expense amounted to \$23,298 and \$21,142 for the years months ended March 31, 2007 and 2006. The Company is not involved in investments in (i) real estate or interests in real estate, (ii) real estate mortgages, and (iii) securities of or interests in persons primarily engaged in real estate activities, as all of its land rights are used for production purposes. **ITEM 3. LEGAL PROCEEDINGS** The Company is not involved in any legal proceedings and is not aware of any pending or threatened claims. The Company expects to be subject to legal proceedings and claims from time to time in the ordinary course of its business, including, but not limited to, claims of alleged infringement of the trademarks and other intellectual property rights of third parties by the Company and its licensees. Such claims, even if not meritorious, could result in the expenditure of significant financial and managerial resources. **ITEM 4. SUBMISSION OF MATTERS TO A VOTE OF SECURITY HOLDERS** During the year ended March 31, 2007, the Company did not submit any matters to a vote of its security holders. **PART II ITEM 5. MARKET FOR COMMON EQUITY AND RELATED STOCKHOLDER MATTERS MARKET INFORMATION** Stem Cell Therapy International, Inc. common stock is quoted in United States markets on the Over the Counter Bulletin Board

("OTCBB") and intends to become listed on the American Stock Exchange ("AMEX"). We have not, at this time, made application to the AMEX. We will make such application once we meet the other qualification requirements from AMEX. However, Stem Cell Therapy International, Inc. cannot make any assurance that trading on AMEX will be approved. Currently there are 500,000 issued and outstanding shares of Series A Preferred stock, which are convertible to shares of common stock on a one for one basis after a certain time period. There are no issued and outstanding shares that could be sold pursuant to Rule 144. Currently there are no outstanding warrants or options to purchase stock. PENNY STOCK REGULATIONS: Our common stock is quoted on the OTCBB, under the symbol "SCII". On June 22, 2007 the last reported sale price of our common stock was \$0.30 per share. The Company's common stock is subject to provisions of Section 15(g) and Rule 15g-9 of the Securities Exchange Act of 1934, as amended (the "Exchange Act"), commonly referred to as the "penny stock rule." Section 15(g) sets forth certain requirements for transactions in penny stocks, and Rule 15g-9(d) incorporates the definition of "penny stock" that is found in Rule 3a51-1 of the Exchange Act. The SEC generally defines "penny stock" to be any equity security that has a market price less than \$5.00 per share, subject to certain exceptions. As long as the Company's common stock is deemed to be a penny stock, trading in the shares will be subject to additional sales practice requirements on broker-dealers who sell penny stocks to persons other than established customers and accredited investors. The following table shows the high and low per share price quotations of Stem Cell Therapy International, Inc. common stock as reported in the OTCBB for the periods presented. High and low bid quotations reflect inter-dealer prices without adjustment for retail mark-ups, markdowns or commissions and may not necessarily represent actual transactions. We completed our acquisition of Stem Cell Therapy Corp. ("Stem Cell Florida") in the third calendar quarter of 2005. Our stock has been thinly traded. HIGH LOW (Calendar Quarters) 2007 First Quarter \$0.37 \$0.12 2006 Fourth Quarter \$0.35 \$0.10 Third Quarter \$0.40 \$0.23 Second Quarter \$0.75 \$0.40 First Quarter \$1.00 \$0.47 2005 Fourth Quarter \$1.75 \$0.45 Third Quarter \$2.70 \$0.51 Second Quarter \$0.22 \$0.001 First Quarter \$0.005 \$0.001 As of March 31, 2007 there were approximately 259 holders of record of Stem Cell Therapy International, Inc. common stock. Many of these shares are held in street name, and consequently we have numerous additional beneficial owners. DIVIDENDS The Company has never declared or paid a dividend on its Common Stock, and does not anticipate paying any cash dividends on its Common Stock in the foreseeable future. The Company expects to retain, if any, its future earnings for expansion or development of the Company's business. The decision to pay dividends, if any, in the future is within the discretion of the Board of Directors and will depend upon the Company's earnings, capital requirements, financial condition and other relevant factors such as contractual obligations. There can be no assurance that dividends can or will ever be paid. RECENT SALES OF UNREGISTERED SECURITIES During April 2006, the Company issued 10,000 shares of common stock to consultants with a fair market value of \$1.00 per share for a total of \$10,000. During June 2006, the Company issued 400,000 shares of common stock to consultants with a fair market value of \$0.39 per share for a total of \$156,000. During July 2006, the Company issued 300,000 shares of common stock to consultants with a fair market value of \$0.37 per share for a total of \$111,000. The Company has engaged a public relations firm to perform services in exchange for \$12,000 worth of the Company's common shares, at market price as quoted on the OTCBB (average of the previous 20 days), per month. Accordingly, the Company has issued the following shares: 28 MONTH AVERAGE MARKET PRICE NUMBER OF SHARES ----- April, 2006 \$ 0.79 15,277 May, 2006 \$ 0.73 16,484 June, 2006 \$ 0.53 22,599 July, 2006 \$ 0.40 30,265 August, 2006 \$ 0.43 28,235

ITEM 6. MANAGEMENT'S DISCUSSION AND ANALYSIS THE FOLLOWING INFORMATION SHOULD BE READ IN CONJUNCTION WITH THE CONSOLIDATED FINANCIAL STATEMENTS OF STEM CELL THERAPY INTERNATIONAL, INC. AND THE NOTES THERETO APPEARING ELSEWHERE IN THIS FILING. STATEMENTS IN THIS MANAGEMENT'S DISCUSSION AND ANALYSIS OR PLAN OF OPERATION AND ELSEWHERE IN THIS ANNUAL REPORT THAT ARE NOT STATEMENTS OF HISTORICAL OR CURRENT FACT CONSTITUTES "FORWARD-LOOKING STATEMENTS." The following management discussion should be read together with the Stem Cell Therapy International, Inc. consolidated financial statements included in this annual report. See "Index to Consolidated Financial Statements" at page F-1. Those financial statements have been prepared in accordance with generally accepted accounting principles of the United States of America. GENERAL OVERVIEW Stem Cell Therapy International, Inc. (the "Company") was originally incorporated in Nevada on December 28, 1992 as Arklow Associates, Inc., and after several name changes was renamed Altadyne, Inc. By March, 2005, the Company (then Altadyne, Inc.) had no assets, liabilities, or ongoing business. On March 20, 2005, R Capital Partners ("R Capital")

acquired the Company (then Altadyne, Inc.), and on September 1, 2005, the Company (then Altadyne), acquired Stem Cell Therapy International Corp., a Nevada corporation ("Stem Cell Florida") in what was effectively a reverse acquisition. Following the transaction, Stem Cell Florida became a wholly owned subsidiary of the Company, and Stem Cell Florida's shareholders became shareholders of the Company. On October 5, 2005, the Company changed its name to Stem Cell Therapy International, Inc. to reflect the new business of the Company. This transaction is accounted for as a reverse merger, with Stem Cell Florida treated as the accounting acquirer for financial statement purposes. Stem Cell Florida was incorporated in Nevada on December 2, 2004. Following the reverse acquisition, the Company assumed and is continuing the operations of Stem Cell Florida. The Company's executive management team are: Calvin C. Cao, Chairman and Chief Executive Officer, Daniel J. Sullivan, Chief Financial Officer, and Lixian Jiang, Chief Operating Officer and Patent Trademark Counsel. We are indirectly involved, as a "middle man," in research and development and practical application within the field of regenerative medicine. We provide allo (human) stem cell biological solutions that are currently being used in the treatment of patients suffering from degenerative disorders of the human body. We have established agreements with highly specialized, professional medical treatment facilities around the world in locations where Stem Cell Transplantation therapy is approved by the appropriate local government agencies. We intend to provide these biological solutions containing allo stem cell products also in the United States to universities, institutes and privately funded laboratory facilities for research purposes and clinical trials. We will initially devote most of our efforts toward organization and fund raising for planned clinics and patient operations and limited revenues have been generated from any such operations. The Company has experienced recurring losses from operations since its inception and at March 31, 2007, we had a working capital deficit of \$551,175 and an accumulated deficit from operations of \$1,189,448. As noted in the independent audit report for the audited Stem Cell Therapy International, Inc. financial statements for the period from inception to March 31, 2007, these factors raise doubt about the ability of the Company to continue as a going concern. Realization of the Company's business plan is dependent upon the Company's ability to meet its future financing requirements, and the success of future operations. This is because we have not generated substantial revenues since inception. Our only other source for cash at this time is through investments or loans from management. We must raise cash to implement our project and stay in business.

**CRITICAL ACCOUNTING POLICIES** 29 The accounting policies of the Company are in accordance with generally accepted accounting principles of the United States of America, and their basis of application is consistent. Outlined below are those policies considered particularly significant: The preparation of financial statements in conformity with accounting principles generally accepted in the United States of America requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reporting period. Actual results could differ from those estimates. Common stock transactions for services are recorded at either the fair value of the stock issued or the fair value of the services rendered, which ever is more evident on the day that the transactions are executed. The certificates must be issued subsequent to the transaction date. We apply Staff Accounting Bulletin No. 104 "Revenue Recognition" ("SAB No. 104") to our revenue arrangements. Currently, our only revenue transactions derive from the licensing of stem cell technology, the sale of stem cell products, and providing informational and referral services; we have no plans to enter into any other revenue transaction in the near future. In accordance with SAB No. 104, we recognize revenue related to these licenses, sales and services upon delivering the license or product, or rendering the services, respectively, as long as (1) there is persuasive evidence of an arrangement, (2) the sales price is fixed or determinable, and (3) collection of the related receivable is reasonably assured. Any payments received prior to delivery of the products or services are included in deferred revenue and recognized once the products are delivered or the services are performed. Research and development costs are charged to operations when incurred and are included in operating expenses.

**RESULTS OF OPERATIONS** As of March 31, 2007 and for the years March 31, 2007 and 2006 We had revenue of \$345,510 during the year ended March 31, 2007 as compared to \$80,934 of revenue for the comparable period in 2006. Revenues during 2007 reflected the treatment of nine patients' and only three patients were treated during the same period ended 2006. Our cost of goods sold for the stem cell biological material delivered during the year ended March 31, 2007 was \$289,993 as compared to \$52,100 for the same period ended 2006. The increase in cost of goods sold is due to the increased number of treatments and a \$116,000 charge for an additional payment made to ICT for not meeting the contractual minimum purchase requirement, which, due to ICT's failure to be able to deliver the product, has caused the minimum purchase

requirement to be terminated. The Company is now using alternative vendors to supply the stem cell biological solutions to each treatment facility. Gross margin for the year ended March 31, 2007 was \$55,517 as compared to \$28,834 for the year ended March 31, 2006. Gross margin as a percentage of revenue for the year ended March 31, 2007 was 16% as compared to 36% for the year ended March 31, 2006. The decreased gross margin is primarily due to the additional \$116,000 charge by ICT for not meeting the minimum purchase requirements. Selling, general and administrative expenses increased \$177,155 or 33% to \$714,227 for the year ended March 31, 2007 as compared to \$537,072 for the year ended March 31, 2006. Selling, general and administrative expenses for the year ended March 31, 2007 primarily consists of the following items: - Payroll expense of \$176,205 for the year ended March 31, 2007, which is an increase of \$141,304 over the year ended March 31, 2006. This increase was due to the Board of Directors approval of salaries for the two executives beginning in January 2006, therefore the year ended March 31, 2006 only included three months of payroll costs. In September 2006, the Company hired an additional executive with an annual salary of \$50,500 and in January 2007, the Company terminated an executive with an annual salary of \$60,000. - Professional fees-legal and accounting amounted to \$92,244 for fiscal year 2007 as compared to \$68,881 for fiscal year 2006. The increase in legal and accounting was due to the Company completing its Form 10SB, incurring legal fees related to the ICT licensing agreement and patent work during the year ended March 31, 2007. 30 - Professional fees-consulting amounted to \$357,282 for the year ended March 31, 2007 as compared to \$372,506 for 2006. During the year ended March 31, 2007, the Company issued 112,860 shares of restricted common stock valued at \$60,000 for investor relations; this contract was terminated in September 2006. The Company also issued 300,000 shares of restricted common stock valued at \$117,000 to advise and consult with the Company on merger and acquisition issues in the European market, this agreement expired in December 2006 and was not renewed. The Company issued 100,000 shares of restricted common stock to a company for financial and investor advisory services valued at \$39,000, this agreement expired in December 2006 and was not renewed. The Company issued 10,000 shares of restricted common stock valued at \$10,000 to a business development advisory consultant for Costa Rica. This agreement expired in February 2007 and was not renewed. The Company also issued 300,000 shares of restricted common stock to a consulting company valued at \$111,000. This agreement expires in July 2011 and the Company has included \$26,208 of consulting fees in statement of operations during the year ended March 31, 2007. The Company also had contracts with various medical and advisory consultants who were compensated with restricted common stock, the amount expensed under these contracts totaled \$73,330 for the year ended March 31, 2007. These agreements expired during the year ended March 31, 2007 and the Company is currently negotiating the renewal of some of those agreements. Our net loss for the year ended March 31, 2007 was \$657,046 as compared to \$516,161 during the same period in 2006. The loss primarily reflects increases in payroll expenses, professional fees and the additional payment to ICT for not meeting the minimum purchase requirement.

**LIQUIDITY AND CAPITAL RESOURCES** The Company's financial statements have been prepared assuming that the Company will continue as a going concern. For the year ended March 31, 2007 and the period since December 2, 2004 (date of inception) through March 31, 2007, the Company has had a net loss of \$657,046 and \$1,189,448, respectively and cash used by operations of \$124,365 and \$286,622, respectively, and negative working capital of \$551,175 at March 31, 2007. As of March 31, 2007, the Company has not emerged from the development stage. In view of these matters, recoverability of recorded asset amounts shown in the accompanying financial statements is dependent upon the Company's ability to begin significant operations and to achieve a level of profitability. Since inception, the Company has financed its activities principally from shareholder advances and some relatively minor sales of equity securities (as set forth below). The Company intends on financing its future development activities and its working capital needs largely from the sale of equity securities until such time that funds provided by operations are sufficient to fund working capital requirements. Effective June 27, 2007, the Company entered into an agreement with Newbridge Securities, Corp. ("Newbridge") to assist the Company on a "best efforts" basis in raising approximately \$250,000 in a private offering of up to 2 million shares of restricted common stock at a price of \$.125 per share. Seasonality As a result of the Company's limited operating history and the emerging nature of the biotechnological markets in which it competes, the Company is unable to accurately forecast its revenues. The Company's current and future expense levels are based largely on its investment plans and estimates of future revenues and are to a large extent fixed and expected to increase.

**OFF-BALANCE SHEET ARRANGEMENTS** The Company is not currently engaged in any off-balance sheet arrangements, as defined by Item 303(c)(2) of Regulation S-B. The Company has not engaged in any off-balance sheet arrangement during the last fiscal year, and is not reasonably likely to engage in any off-balance

sheet arrangement in the near future. NEW ACCOUNTING PRONOUNCEMENTS In July 2006, the Financial Accounting Standards Board (FASB) issued FASB Interpretation No. 48, ("FIN 48") "Accounting for uncertainty in income taxes - an interpretation of SFAS No. 109." This Interpretation provides guidance for recognizing and measuring uncertain tax positions, as defined in FASB No. 109, "Accounting for income taxes." FIN 48 prescribes a threshold condition that a tax position must meet for any of the benefit of an uncertain tax position to be recognized in the financial statements. Guidance is also provided regarding derecognition, classification and disclosure of uncertain tax positions. FIN 48 is effective for fiscal years beginning after December 15, 2006. The Company does not expect that this Interpretation will have a material impact on their financial position, results of operations or cash flows. In September 2006, the FASB issued SFAS No. 158, ("SFAS 158), "Employers' Accounting for Defined Benefit Pension and Other Post-retirement Plans". Among other items, SFAS 158 requires recognition of the over-funded status of an entity's defined benefit postretirement plan as an asset or liability in the financial statements, the measurement of defined benefit post-retirement plan assets and obligations as of the end of the employer's fiscal year and recognition of the funded status of defined post-retirement plans in other comprehensive income ("OCI"). The standard was effective for the Company as of March 31, 2007. The adoption of SFAS 158 did not have an impact on the Company's financial position, results of operations or cash flows. In February 2007, the FASB issued SFAS No. 159 ("SFAS 159"), "The Fair Value Option for Financial Assets and Financial Liabilities", which permits an entity to measure certain financial assets and financial liabilities at fair value. Under SFAS 159, entities that elect the fair value option will report unrealized gains and losses in earnings at each subsequent reporting date. The fair value option may be elected on a instrument-by-instrument basis, with a few exceptions, as long as it is applied to the instrument in its entirety. The fair value option election is irrevocable, unless 31 a new election date occurs. SFAS 159 establishes presentation and disclosure requirements to help financial statement users understand the effect of the entity's election on its earnings but does not eliminate disclosure requirements of other accounting standards. Assets and liabilities that are measured at fair value must be displayed on the face of the balance sheet. SFAS 159 is effective as of the beginning of the first fiscal year that begins after November 15, 2007. The Company does not expect the adoption of SFAS 159 to have a material impact on the financial statements. Other recent accounting pronouncements issued by the FASB (including its EITF), the AICPA, and the SEC did not or are not believed by management to have a material impact on the Company's present or future financial statements.

32 ITEM 7. FINANCIAL STATEMENTS TABLE OF CONTENTS: Report of Independent Registered Public Accounting Firm-Aidman, Piser & Company P.A.....F-2 Report of Independent Registered Public Accounting Firm-Pender, Newkirk & Company LLP.....F-3 Consolidated Balance Sheets as of March 31, 2007 and 2006.....F-4 Consolidated Statements of Operations for the years ended March 31, 2007 and 2006 and for the period from December 2, 2004 (Date of Inception) through March 31, 2007.....F-5 Consolidated Statement of Changes in Stockholders' (Deficit) for the period from December 2, 2004 (Date of Inception) through March 31, 2007.....F-6 Consolidated Statements of Cash Flows for the years ended March 31, 2007 and 2006 and for the period from December 2, 2004 (Date of Inception) through March 31, 2007.....F-7 Notes to Consolidated Financial Statements.....F-8

F-1 REPORT OF INDEPENDENT REGISTERED CERTIFIED PUBLIC ACCOUNTING FIRM To the Board of Directors and Stockholders of Stem Cell Therapy International, Inc. and Subsidiary We have audited the accompanying consolidated balance sheet of Stem Cell Therapy International, Inc and Subsidiary as of March 31, 2007 and the related consolidated statements of operations, stockholders' deficit, and cash flows for the year ended March 31, 2007, and for the period from December 2, 2004 (date of inception) through March 31, 2007. These consolidated financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these consolidated financial statements based on our audit. The financial statements of Stem Cell Therapy International, Inc. and Subsidiary for the year ended March 31, 2006 were audited by other auditors. Those auditors expressed an unqualified opinion on those financial statements in their report dated May 18, 2006. Our opinion on the consolidated statements of operations, changes in stockholders' equity, and cash flows, insofar as it relates to the amounts included for the period from December 2, 2004 (date of inception) through March 31, 2006, is based solely on the report of other auditors. We conducted our audit in accordance with standards of the Public Company Accounting Oversight Board (United States of America). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. The Company is not required to have, nor were we engaged to perform, an audit of its internal control

over financial reporting. Our audit included consideration of internal control over financial reporting as a basis for designing audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Company's internal control over financial reporting. Accordingly, we express no such opinion. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audit provide a reasonable basis for our opinion. In our opinion, the consolidated financial statements referred to above present fairly, in all material respects, the consolidated financial position of Stem Cell Therapy International, Inc. and Subsidiary as of March 31, 2007 and the consolidated results of their operations and their cash flows for the year ended March 31, 2007 and for the period from December 2, 2004 (date of inception) through March 31, 2007 in conformity with accounting principles generally accepted in the United States of America. The accompanying consolidated financial statements have been prepared assuming that Stem Cell Therapy International, Inc. and Subsidiary will continue as a going concern. As discussed in Note 2 to the consolidated financial statements, the Company incurred significant losses and used cash in operating activities during the year ended March 31, 2007, and had a deficit in working capital at March 31, 2007. These factors, among others as discussed in Note 2 to the consolidated financial statements, raise substantial doubt about the Company's ability to continue as a going concern. Management's plans in regards to these matters are also described in Note 2. The financial statements do not include any adjustments that might result from the outcome of this uncertainty. /s/ Aidman, Piser & Company, P.A. The accompanying notes are an integral part of the consolidated financial statements. F-7 Stem Cell Therapy International, Inc. (a development stage enterprise) Notes to Consolidated Financial Statements For the Years Ended March 31, 2007 and 2006 and for the period from December 2, 2004 (Date of Inception) through March 31, 2007 1.

**BACKGROUND INFORMATION, BASIS OF PRESENTATION AND BUSINESS REORGANIZATION** Company background: Stem Cell Therapy International, Inc. (the "Company"), was originally incorporated in the state of Nevada on December 28, 1992 as Arklow Associates, Inc. The Company's operating business is Stem Cell Therapy International Corp. ("Stem Cell Florida") a wholly owned subsidiary which is a development stage enterprise and was incorporated in the state of Nevada on December 2, 2004. The corporate headquarters is located in Tampa, Florida.

The Company is engaged in the licensing of stem cell technology, the sale of stem cell products, and information, education, and referral services relating to potential stem cell therapy patients. The Company purchases allo stem cell biological solutions that are currently being used in the treatment of patients suffering from degenerative disorders of the human body such as Alzheimer's, Parkinson's Disease, ALS, leukemia, muscular dystrophy, multiple sclerosis, arthritis, spinal cord injuries, brain injury, stroke, heart disease, liver and retinal disease, diabetes as well as certain types of cancer. The Company has established agreements with three highly specialized, professional medical treatment facilities in the Ukraine, China and Mexico where stem cell transplantation therapy is approved by the appropriate local government agencies. The Company intends to provide these biological solutions containing stem cell products in the United States to universities, institutes and privately funded laboratory facilities for research purposes and clinical trials. Its products, which are available now, include various allo stem cell biological solutions (containing human stem cells), low-molecular proteins and human growth factor hormones. The Company intends to deliver stem cell transplants worldwide and educate and consult with physicians and patients in the clinical aspects of stem cell transplantation. Business reorganization: Effective September 1, 2005, Stem Cell Florida entered into a Reorganization and Stock Purchase Agreement (the "Agreement") with the Company, then named Altadyne, Inc., a company quoted on the Pink Sheets, which had no assets, liabilities or ongoing operations. Under the terms of the agreement, the Company, (then Altadyne) acquired 100% of the issued and outstanding shares of common stock of Stem Cell Florida in a non-cash transaction and Stem Cell Florida became a wholly owned subsidiary of the Company. Subsequent to the merger, Altadyne changed its name to Stem Cell Therapy International Inc. This transaction is accounted for as a reverse merger, with Stem Cell Florida treated as the accounting acquirer for financial statement purposes. The results of operations for Stem Cell Florida, the accounting acquirer, for the period from December 2, 2004 (Date of Inception) have been included in the consolidated statements of operations of the Company.

Principles of consolidation: The accompanying consolidated financial statements include the accounts of Stem Cell Therapy International, Inc. and its wholly-owned subsidiary, Stem Cell Therapy International Corp. All intercompany accounts and transactions have been eliminated. 2. **LIQUIDITY AND MANAGEMENT'S PLANS** The accompanying consolidated financial statements have been prepared assuming the Company will continue as a going concern. For the year ended March 31, 2007 and the period since December 2, 2004 (date of inception) through March 31, 2007, the Company has had net losses of \$657,046 and \$1,189,448, respectively, and cash used in operations of \$124,365 and \$286,622, respectively, and has negative working capital of \$551,175 at March 31, 2007. As of March

31, 2007, the Company has not emerged from the development stage. In view of these matters, the ability of the Company to continue as a going concern is dependent upon the Company's ability to generate additional financing and ultimately increase operations and to achieve a level of profitability. Since inception, the Company has financed its activities principally from the use of equity securities to pay for services and related party advances. The Company intends on financing its future development activities and its working capital needs largely from the sale of equity securities and loans from the Company's Chief Executive Officer, until such time that funds provided by operations are sufficient to fund working capital requirements. There can be no assurance that the Company will be successful at achieving its financing goals at reasonably commercial terms, if at all.

**F-8 3. SIGNIFICANT ACCOUNTING POLICIES**

**Use of estimates:** The preparation of financial statements in conformity with accounting principles generally accepted in the United States of America requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reporting period. Actual results could differ from those estimates.

**Concentration of credit risk:** Cash balances are maintained with a major financial institution in the United States. Deposits with this bank may exceed the amount of insurance provided on such deposits. Generally, these deposits may be redeemed upon demand and, therefore, bear minimal risk.

**Impairment of long-lived assets:** The Company evaluates the recoverability of its long-lived assets or asset groups whenever adverse events or changes in business climate indicate that the expected undiscounted future cash flows from the related assets may be less than previously anticipated. If the net book value of the related assets exceeds the undiscounted future cash flows of the assets, the carrying amount would be reduced to the present value of their expected future cash flows and an impairment loss would be recognized. During the year ended March 31, 2007, the Company impaired the remaining balance of \$4,333 of intangible assets with a charge to the consolidated statement of operations.

**Revenue recognition:** Revenue is derived from the licensing of stem cell technology, the sale of stem cell products, and providing informational and referral services. Revenue related to these licenses, sales and services is recognized upon delivering the license or product, or rendering the services, respectively. Any payments received prior to delivery of the products or services are included in deferred revenue and recognized once the products are delivered or the services are performed.

**Income taxes:** Deferred tax assets and liabilities are recognized for the estimated future tax consequences attributable to differences between the financial statements carrying amounts of existing assets and liabilities and their respective income tax bases. Deferred tax assets and liabilities are measured using enacted tax rates expected to apply to taxable income in the years in which those temporary differences are expected to be recovered or settled. The effect on deferred tax assets and liabilities of a change in tax rates is recognized as income in the period that included the enactment date. Due to the Company's continued losses, the Company has placed a full valuation allowance against the deferred tax asset.

**Loss per common share:** Basic and diluted loss per share are computed based on the weighted average number of common shares outstanding during the period. Common stock equivalents are not considered in the calculation of diluted earnings per share for the periods presented if their effect would be anti-dilutive. The Company had no common stock equivalents outstanding at March 31, 2007 or 2006.

**Stock-based compensation:** In April 2006, the Company adopted the provisions of Statement of Financial Accounting Standards No. 123R - Share-based Payments ("FAS 123R") replacing Accounting for Stock-Based Compensation ("FAS 123"), which are similar and require the use of the fair-value based method to determine compensation for all arrangements under which employees and others receive shares of stock or equity instruments (warrants and options). The adoption of SFAS 123R had no significant impact on the Company's results of operations.

**F-9 3. SIGNIFICANT ACCOUNTING POLICIES (CONTINUED)**

**Reclassifications:** Certain reclassifications have been made to the accompanying fiscal 2006 consolidated financial statements to conform to the March 31, 2007 presentation. Such reclassifications had no impact on net loss as previously reported.

**Recently issued accounting pronouncements:** In July 2006, the Financial Accounting Standards Board (FASB) issued FASB Interpretation No. 48, ("FIN 48") "Accounting for uncertainty in income taxes - an interpretation of SFAS No. 109." This Interpretation provides guidance for recognizing and measuring uncertain tax positions, as defined in FASB No. 109, "Accounting for income taxes." FIN 48 prescribes a threshold condition that a tax position must meet for any of the benefit of an uncertain tax position to be recognized in the financial statements. Guidance is also provided regarding derecognition, classification and disclosure of uncertain tax positions. FIN 48 is effective for fiscal years beginning after December 15, 2006. The Company does not expect that this Interpretation will have a material impact on their financial position, results of operations or cash flows. In September 2006, the FASB issued SFAS No. 157 ("SFAS 157"), "Fair Value

Measurements." SFAS 157 clarifies the principle that fair value should be based on the assumptions that market participants would use when pricing an asset or liability. Additionally, it establishes a fair value hierarchy that prioritizes the information used to develop those assumptions. SFAS 157 is effective for financial statements issued for fiscal years beginning after November 15, 2007. The Company does not expect the adoption of SFAS 157 to have a material impact on their financial position, results of operations or cash flows. In September 2006, the FASB issued SFAS No. 158, ("SFAS 158), "Employers' Accounting for Defined Benefit Pension and Other Post-retirement Plans". Among other items, SFAS 158 requires recognition of the over-funded status of an entity's defined benefit postretirement plan as an asset or liability in the financial statements, the measurement of defined benefit post-retirement plan assets and obligations as of the end of the employer's fiscal year and recognition of the funded status of defined post-retirement plans in other comprehensive income ("OCI"). The standard was effective for the Company as of March 31, 2007. The adoption of SFAS 158 did not have an impact on the Company's financial position, results of operations or cash flows. In February 2007, the FASB issued SFAS No. 159 ("SFAS 159"), "The Fair Value Option for Financial Assets and Financial Liabilities", which permits an entity to measure certain financial assets and financial liabilities at fair value. Under SFAS 159, entities that elect the fair value option will report unrealized gains and losses in earnings at each subsequent reporting date. The fair value option may be elected on a instrument-by-instrument basis, with a few exceptions, as long as it is applied to the instrument in its entirety. The fair value option election is irrevocable, unless a new election date occurs. SFAS 159 establishes presentation and disclosure requirements to help financial statement users understand the effect of the entity's election on its earnings but does not eliminate disclosure requirements of other accounting standards. Assets and liabilities that are measured at fair value must be displayed on the face of the balance sheet. SFAS 159 is effective as of the beginning of the first fiscal year that begins after November 15, 2007. The Company does not expect the adoption of SFAS 159 to have a material impact on the financial statements. In September 2006, the Securities and Exchange Commission issued Staff Accounting Bulletin ("SAB") No. 108, "Considering the Effects of Prior Year Misstatements When Quantifying Current Year Misstatements." SAB No. 108 requires analysis of misstatements using both an income statement (rollover) approach and a balance sheet (iron curtain) approach in assessing materiality and provides a one-time cumulative effect transition adjustment. SAB No. 108 is effective for our 2007 annual financial statements. The adoption of SAB No. 108 did not have a material impact on the financial statements. Other recent accounting pronouncements issued by the FASB (including its EITF), the AICPA, and the SEC did not or are not believed by management to have a material impact on the Company's present or future financial statements.

**F-10 4. RELATED PARTY TRANSACTIONS** Stockholder advances consist of advances from an officer and significant stockholder of the Company to assist the Company in meeting its financial obligations. These advances are non-interest bearing, unsecured and due on demand. Due to related party represents amounts payable to a consulting company owned by an officer and significant stockholder. These amounts are non-interest bearing and unsecured.

**5. STOCKHOLDERS' DEFICIT Capitalization:** The Company has 100,000,000 shares of common stock authorized. In addition, there are 10,000,000 authorized shares of participating convertible preferred stock, \$.001 par value, the issuance of which is subject to approval by the Board of Directors. The Board of Directors has the authority to declare dividends. The voting rights of the convertible preferred stockholders are equivalent to that of the common stockholders. Each share of convertible preferred stock can be converted at any time by the holder into one share of common stock. As of March 31, 2007, the Company had 500,000 shares of convertible preferred stock issued and outstanding. Upon issuance of the preferred stock, management determined that the convertible preferred stock contained a beneficial conversion feature calculated as of the date of commitment, September 15, 2005, based on the fair value of the closing price of the common stock, \$0.07 per share, and an exercise price of \$0.05 per share, calculated as \$25,000 paid for the preferred stock divided by the 500,000 shares of convertible preferred stock received. Each share of the preferred stock is convertible into one share of common stock with no additional investment. The beneficial conversion was recorded as a dividend, as the preferred stock can be converted at any time after the issue date.

**Stock options:** The following table summarizes the activity related to all Company stock options for the year ended March 31, 2007 and 2006 and for the period from December 2, 2004 (Date of Inception) through March 31, 2007:

Weighted Average Exercise Price	Exercise Price	Number of Shares	per Share	per Share	Stock	Options	Options
Outstanding at December 2, 2004	-	-	-	-	Granted	6,000,000	\$
0.001-0.75	\$ 0.18	Exercised (500,000)	\$ 0.001	\$ 0.001	Outstanding at March 31, 2005	5,500,000	\$
0.003-0.75	\$ 0.196	Canceled or expired (5,500,000)	\$ 0.003-0.75	\$ 0.196			

----- Outstanding at March 31, 2006 - ===== There were no options granted during the year ended March 31, 2007. F-11 7. INCOME TAXES There was no current or deferred provision or benefit for income taxes for the years ended March 31, 2007 and 2006 and for the period from December 2, 2004 (Date of Inception) through March 31, 2007. The components of deferred tax assets as of March 31, 2007 and 2006 are as follows: March 31, 2007 2006 ----- Deferred tax assets: Accrued payroll \$ 64,200 \$ 13,200 Net operating loss carryforward 382,700 187,100 ----- 446,900 200,300 Less: Valuation allowance (446,900) (200,300) ----- \$ - \$ - ===== The Company has incurred operating losses since its inception and, therefore, no tax liabilities have been incurred for the periods presented. The amount of unused tax losses available to carry forward and apply against taxable income in future years totaled approximately \$980,000 at March 31, 2007. The loss carry forwards expire beginning in 2025. Due to the Company's continued losses, management has established a valuation allowance equal to the amount of deferred tax assets due to it being more likely than not that the Company will not realize this benefit. The income tax provision differs from the amount of tax determined by applying the Federal statutory rate as follows: Period from December 2, 2004 (Date of Inception) Years Ended March 31, through March 31, ----- 2007 2006 2007 ----- Income tax provision at statutory rate \$ (223,400) \$ (172,100) \$ (404,400) Increase (decrease) in income tax due to: Nondeductible expenses 600 60 700 State income taxes, net (23,900) (18,260) (43,200) Change in valuation allowance 246,700 190,300 446,900 ----- \$ - \$ - \$ - ===== Stem Cell Therapy International, Inc. (a development stage enterprise) Notes to Consolidated Financial Statements For the Years Ended March 31, 2007 and 2006 and for the period from December 2, 2004 (Date of Inception) through March 31, 2007 Income taxes are based on estimates of the annual effective tax rate and evaluations of possible future events and transactions and may be subject to subsequent refinement or revision. 8. COMMITMENTS AND CONTINGENCIES Letter of credit: The Company had a standing letter of credit with a financial institution for \$120,000 which was available to be drawn against accounts maintained by the Company with the financial institution. This letter of credit served as a guarantee of payment for a third party vendor. This standing letter of credit was collateralized by a \$120,000 certificate of deposit of which this third party had drawn \$116,320 against this letter of credit as of March 31, 2007. Following the draw, the Company has not replenished the letter of credit as of March 31, 2007 nor has the Company purchased the required minimum amounts of biological stem cell solutions from ICT as required by the agreement. (see discussion of the licensing agreement below) Consulting agreements: The Company has entered into several consulting agreements with other companies and individuals to provide consulting and advisory services to the Company. The agreements provide for terms ranging from one to three years. Additionally, the consulting agreements required the issuance of 4,239,000 shares of the Company's common stock valued at \$382,409 on the date of the F-12 8. COMMITMENTS AND CONTINGENCIES (CONTINUED) performance commitment. As of March 31, 2007, the Company had issued these shares of common stock and has included \$86,208 in prepaid expenses for services not yet performed pursuant to the agreements. The Company has entered into several consulting agreements with doctors to provide consulting and advisory services to the Company. The agreements provide for six months to one year service terms. In exchange for these services, the Company issued a total of 110,000 shares of common stock valued at \$114,230 on the date of the performance commitment. As of March 31, 2007, the Company had issued these shares of common stock for services performed pursuant to the agreements. Effective May 4, 2005, the Company entered into an agreement with Westminster Securities Corporation ("Westminster") for consulting services and to secure funding and/or lines of credit. In exchange for these services, the Company paid Westminster a \$20,000 retainer and had agreed to pay 10% of any equity-based funding, 8% of any debt-based convertible funding, 5% of any nonconvertible debt-based funding, as well as, issue warrants equal to 10% of the number of shares of stock issued in connection with the funding. As of March 31, 2007, no funding has been secured; however, Westminster did facilitate the acquisition of Altadyne, and therefore received 379,000 shares of common stock in September 2005. The Agreement with Westminster was mutually terminated effective January 4, 2006. Licensing agreement: Effective September 1, 2005, the Company entered into a ten year licensing agreement with the Institute of Cell Therapy, a company incorporated and organized under the laws of Kiev, Ukraine ("ICT"). Pursuant to the agreement, the Company issued ICT 5,000,000 shares of the Company's common stock recorded at the fair market value of the Company's common stock of \$5,000. The agreement grants the Company a right and license in most parts of the world to utilize patents, processes and products owned or produced by ICT in connection with the operation of the Company's business. In

exchange for the license, the Company agrees to exclusively purchase all biological solution of stem cell Allo Transplant materials from ICT. Such Allo Transplant materials shall be at a cost of \$6,500 per patient per condition. The licensing agreement guarantees a minimum purchase of 60 portions per twelve month period. In the event that the Company is unable to purchase the minimum quantities, ICT will be entitled to draw upon the irrevocable letter of credit at the rate of \$2,000 for every portion less than the minimum required purchase. The Company had provided ICT with a \$120,000 irrevocable letter of credit in ICT's favor for the first three years of the agreement. In the event the Letter of Credit is drawn upon, the Company agreed to replenish the Letter of Credit to the extent of any such draws. As of September 2006, the Company had not met the first year's minimum purchase requirement and ICT withdrew \$116,000 on the letter of credit, which has been included in the cost of goods sold in the accompanying Consolidated Statements of Operations. However, ICT was unable to provide the product as requested and the Company was required to purchase the stem cell materials from alternative sources. Management believes that ICT's inability to provide the requested stem cell materials relieves the Company of its obligations to replenish the letter of credit and to fulfill the minimum purchase requirements. As such, the accompanying consolidated financial statements do not reflect the results, if any, of the Company's failure to purchase the minimum amount of stem cell materials under the above mentioned license agreement.

Financing agreement: During the year ended March 31, 2007, the Company entered into an agreement to locate financing with a third party for three years. As consideration for these consulting services, the Company has agreed to issue 500,000 shares of restricted common stock and a 10% finder's fee for any funds brought into the Company. As of March 31, 2007, the Company has not entered into any funding agreements, and therefore the third party is not owed any consideration.

#### F-13 9. SUBSEQUENT EVENTS

Subsequent to year end, the Company entered into a six month consulting agreement with a consulting group to provide consulting services in connection with finance relations, financial services and mergers and acquisitions. In exchange for these services, the Company has issued the consulting group 300,000 shares of restricted common stock valued at \$117,000. Subsequent to year end, the Company entered into a three month consulting agreement with a consulting group to provide consulting services in connection management consulting, business advisory services and public relations. In exchange for these services, the Company has issued the consulting group 250,000 shares of restricted common stock valued at \$45,000 and an additional \$2,500 per month. Effective June 27, 2007, the Company entered into an agreement with Newbridge Securities, Corp. ("Newbridge") to assist the Company on a "best efforts" basis in raising approximately \$250,000 in a private offering of up to 2 million shares of restricted common stock at a price of \$.125 per share. Newbridge is entitled to a selling concession of 10% of the gross proceeds of the offering, a 3% non-accountable expense allowance and warrant coverage equal to 20% of the total securities placed in the offering, including any penalty shares, at an exercise price of \$.15 per share. The Company is required to file a registration statement covering the above securities within 45 days of the completion of the offering. If the Company fails to have the registration statement deemed effective by the Securities and Exchange Commission within 135 days after the completion of the offering, the Company will issue to the holders of the securities, additional shares of restricted common stock equal to 1.5% of the number of shares purchased for each thirty-day period until the registration statement is deemed effective, up to a maximum of eight such thirty-day periods.

#### F-14 ITEM 8. CHANGES IN AND DISAGREEMENTS WITH ACCOUNTANTS ON ACCOUNTING AND FINANCIAL

#### DISCLOSURE NONE ITEM 8A. CONTROLS AND PROCEDURES

Evaluation of disclosure controls and procedures. ----- Under the supervision and with the participation of our Management, including our Chief Executive Officer and Chief Financial Officer, we conducted an evaluation of the effectiveness of the design and operations of our disclosure controls and procedures, as defined in Rules 13a-15(e) and 15d-15(e) under the Securities Exchange Act of 1934, as amended (the "Exchange Act") as of the end of the period covered by this report. Based on this evaluation, our Chief Executive Officer and Chief Financial Officer concluded that our financial disclosure controls and procedures were effective so as to timely identify, correct and disclose information required to be included in our Securities and Exchange Commission ("SEC") reports is recorded, processed, summarized and reported within time periods specified in the SEC rules and forms relating to Stem Cell Therapy International, Inc. and was made known to them by others within those entities, particularly during the period when this report was being prepared. There have been no significant changes in the Company's internal control over financial reporting or, to our knowledge, in other factors that could significantly affect the Company's internal controls over financial reporting subsequent to the evaluation date.

ITEM 8B OTHER INFORMATION None PART III ITEM 9. DIRECTORS AND EXECUTIVE OFFICERS OF THE REGISTRANT The following table sets forth the names

and ages of our current directors and executive officers, their principal offices and positions and the date each such person became a director or executive officer. The Board of Directors elects our executive officers annually. Our directors serve one-year terms or until their successors are elected and accept their positions. The executive officers serve terms of one year or until their death, resignation or removal by the Board of Directors. There are no family relationships or understandings between any of the directors and executive officers. In addition, there was no arrangement or understanding between any executive officer and any other person pursuant to which any person was selected as an executive officer.

NAME OF DIRECTOR OR EXECUTIVE OFFICER	Age	Current Position and Office
-----	-----	-----
Chief Executive Officer, Calvin C. Cao	39	President and Chairman
-----	-----	-----
Chief Financial Officer Daniel J. Sullivan	50	and Director
-----	-----	-----
Chief Operating Officer and Patent Trademark Counsel Lixian (John)		
-----	-----	-----
Jiang	35	and Director
-----	-----	-----

**CHAIRMAN AND CHIEF EXECUTIVE OFFICER - CALVIN CAO:** Calvin Cao founded Stem Cell Therapy International Corp., Tampa, Florida in 2004. After graduating from the University of South Florida in 1991, with a BSEE degree in electrical engineering, Mr. Cao launched Cao Computer Technology, Tampa, FL, a company that provides engineering and business technology strategy, product development and designing mission-critical enterprise systems. The company has provided services for large businesses and universities as well as state and local governments. He ran that company until 1996, when it merged with International Net Corp, Tampa, FL, which is a worldwide distributor of IT products and other high-quality electronic products; of which Mr. Cao was also a co-founder. As president and Chief Operating Officer of International Net, he was engaged in mergers and acquisitions as well as raising capital until 1999 when he sold his shares back to the company. In the same year, he formed Micronet Capital Corp., an investment-banking firm that specialized in assisting start-up 32 companies with private placements, M&A and other financial services. In 2004, Micronet Capital Corp. merged with Global Capital Corp. to better position and reflects the global presence of its services and offerings. Global Capital Corp. remains in operation. In 2004, Mr. Cao co-founded Vascular Relief Centers Corp., which changed its name to Vein Associates of America, Inc. ("Vein Associates"). Vein Associates is the parent company of Vein Associates, PA, headquartered in Heathrow, FL, which operates a chain of vascular clinics. Vein Associates' clinics specialize in the diagnosis and non-surgical treatment of hemorrhoids, varicose and spider veins using minimally invasive procedures. In 2005, Mr. Cao decided to dedicate his energies to working full time with Stem Cell Florida. Mr. Cao became president and chairman of the Company on the closing date of the Reorganization and Stock Purchase agreement between the Company and Stem Cell Florida, September 9, 2005. He was reelected as chairman in March 2007 and his term expires March 2008, or when his replacement is duly elected and qualified.

**CHIEF FINANCIAL OFFICER AND DIRECTOR - DANIEL J. SULLIVAN** Mr. Sullivan is a senior financial executive with 25 years of industry experience. After graduating from San Diego State University in 1980, in January 1981 Mr. Sullivan became an Accountant at KPMG Peat Marwick in Costa Mesa, California where he became a manager in 1985 and left in September 1986. From September 1986 through November 1987, Mr. Sullivan was Controller for Security Etch International, Inc. in Irvine, California, a manufacturer of automobile security devices. From November 1987 until October 1988, Mr. Sullivan was a Manager at Wurth and Company in Orange, California, a certified public accounting firm. From October 1988 through February 1993, Mr. Sullivan was Vice President and Chief Financial Officer of Trillium Management, Inc., in Los Angeles, California, a \$75 million trailer manufacturer and truck/trailer leasing company, which was acquired by Oshkosh Truck Corporation in Oshkosh, Wisconsin, a \$60 million freight trailer manufacturer, where Mr. Sullivan remained as Chief Financial Officer. From February 1993 through February 1994, Mr. Sullivan was Chief Financial Officer for Bitec Southeast, Inc. in Tampa, Florida, and industrial and medical gases and welding equipment distributor. SALVADOR VARGAS, MD., - Betania West Institute, Tijuana, Mexico DR. LUIS JORGE QUINTERO, MD., - Neurosurgery, Tijuana, Mexico DR. NIKITA TREGUBOV, MD., - Internal Medicine, Walter Reed Army Institute of Research, Seminole, FL Each member of the Advisory Board, that is not a member of the management of ICT, receives 10,000 shares of restricted common stock as compensation for services provided to the Company as a member of the Advisory Board. These shares are awarded without regard to the number of patients recommended for stem cell therapy, if any. Management believes that it has recruited industry respected individuals to form the Advisory Board and encourages all members of the Advisory Board to recommend only what is in the best interest of each patient. A potential conflict of interest 34 exists as the member of the MSAB are compensated in restricted stock and the value of that stock may be influenced by the number of patient procedures recommended by the Advisory Board. In addition, two members of the Advisory Board located in Mexico are also treating physicians, which could result in a potential conflict of interest. Some members of the Advisory Board are requested to perform additional services such as evaluate new technologies and products that are available for stem cell treatment. These Advisory Board members are compensated with additional shares of the Company stock as determined by the Company.
