ANNUAL REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT OF 1934

For the fiscal year ended December 30, 2011

OR

TRANSITION REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT OF 1934

For the transition period from _____ to _____.

Commission file number 1-14706

FRESH DEL MONTE PRODUCE INC.
(Exact Name of Registrant as Specified in Its Charter)

The Cayman Islands (State or Other Jurisdiction of Incorporation or Organization)	N/A (I.R.S Employer Identification No.)
c/o Walkers Corporate Services Limited Walker House, 87 Mary Street George Town, Grand Cayman, KY1-9002 Cayman Islands	N/A
(Address of Registrant's Principal Executive Offices) (305) 520-8400 (Registrant's telephone number including area code)	(Zip Code)

Please send copies of notices and communications from the Securities and Exchange Commission to:

c/o Del Monte Fresh Produce Company
241 Sevilla Avenue
Coral Gables, Florida 33134
(Address of Registrant's U.S. Executive Offices)

Securities registered pursuant to Section 12(b) of the Act:

Edgar Filing: FRESH DEL MONTE PRODUCE INC - Form 10-K

Title of Each Class	Name of Each Exchange on Which Registered
Ordinary Shares, par value \$0.01 per share	New York Stock Exchange
Securities registered pursuant to Section 12(g) of the Act: None	

Indicate by check mark if the Registrant is a well-known seasoned issuer, as defined in Rule 405 of the Securities Act. Yes No

Indicate by check mark if the Registrant is not required to file reports pursuant to Section 13 or Section 15(d) of the Act. Yes No

Indicate by check mark whether the Registrant: (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the Registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days. Yes No

Indicate by check mark whether the registrant has submitted electronically and posted on its corporate Web site, if any, every Interactive Data File required to be submitted and posted pursuant to Rule 405 of Regulation S-T (§232.405 of this chapter) during the preceding 12 months (or for such shorter period that the registrant was required to submit and post such files).
Yes No

Indicate by check mark if disclosure of delinquent filers pursuant to Item 405 of Regulation S-K is not contained herein, and will not be contained, to the best of Registrant's knowledge, in definitive proxy or information statements incorporated by reference in Part III of this Form 10-K or any amendment to this Form 10-K.

Indicate by check mark whether the Registrant is a large accelerated filer, an accelerated filer, a non-accelerated filer, or a smaller reporting company. See the definitions of "large accelerated filer," "accelerated filer" and "smaller reporting company" in Rule 12b-2 of the Exchange Act. (Check one):

Large accelerated filer Accelerated filer

Non-accelerated filer Smaller reporting company

Indicate by check mark whether the Registrant is a shell company (as defined in Rule 12b-2 of the Act). Yes No

The aggregate market value of Ordinary Shares held by non-affiliates at July 1, 2011, the last business day of the registrant's most recently completed second quarter, and was \$1,070,668,415 based on the number of shares held by non-affiliates of the registrant and the reported closing price of Ordinary Shares on July 1, 2011 of \$26.99.

As of February 17, 2012, there were 57,796,277 ordinary shares of Fresh Del Monte Produce Inc. issued and outstanding.

DOCUMENTS INCORPORATED BY REFERENCE

Portions of the Registrant's definitive Proxy Statement for the 2011 Annual General Meeting of Shareholders to be filed with the Securities and Exchange Commission within 120 days after the end of the registrant's fiscal year are incorporated by reference in Part III of this report.

Forward-Looking Statements

In this Annual Report (the “Report”), references to “\$” and “dollars” are to United States dollars. References in this Report to Fresh Del Monte, “we”, “our” and “us” refer to Fresh Del Monte Produce Inc. and its subsidiaries, unless the context indicates otherwise. Percentages and certain amounts contained herein have been rounded for ease of presentation. Any discrepancies in any table between totals and the sums of amounts listed are due to rounding. As used herein, references to the years ended 2009, 2010 and 2011 are to fiscal years ended January 1, 2010, December 31, 2010 and December 30, 2011, respectively.

This Report, information included in future filings by us and information contained in written material, press releases and oral statements, issued by or on behalf of us contains, or may contain, statements that constitute forward-looking statements in particular, information in Item 1. Business and Item 7. Management’s Discussion and Analysis of Financial Condition and Results of Operations – Trend Information, contained in this Report. In this Report, these statements appear in a number of places and include statements regarding the intent, beliefs or current expectations of us or our officers (including statements preceded by, followed by or that include the words “believes”, “expects”, “anticipates” or similar expressions) with respect to various matters, including our plans and future performance. These forward-looking statements involve risks and uncertainties. Fresh Del Monte’s actual plans and performance may differ materially from those in the forward-looking statements as a result of various factors, including (i) the uncertain global economic environment and the timing and strength of a recovery in the markets we serve, and the extent to which adverse economic conditions continue to affect our sales volume and results, including our ability to command premium prices for certain of our principal products, or increase competitive pressures within the industry, (ii) the impact of governmental initiatives in the United States and abroad to spur economic activity, including the effects of significant government monetary or other market interventions on inflation, price controls and foreign exchange rates, (iii) the impact of governmental trade restrictions, including adverse governmental regulation that may impact our ability to access certain markets, (iv) our anticipated cash needs in light of our liquidity, (v) the continued ability of our distributors and suppliers to have access to sufficient liquidity to fund their operations, (vi) trends and other factors affecting our financial condition or results of operations from period to period, including changes in product mix or consumer demand for branded products such as ours, particularly as consumers remain price-conscious in the current economic environment; anticipated price and expense levels; the impact of crop disease, severe weather conditions, such as flooding, or natural disasters, such as earthquakes, on crop quality and yields and on our ability to grow, procure or export our products; the impact of prices for petroleum-based products and packaging materials; and the availability of sufficient labor during peak growing and harvesting seasons, (vii) the impact of pricing and other actions by our competitors, particularly during periods of low consumer confidence and spending levels, (viii) the impact of foreign currency fluctuations, (ix) our plans for expansion of our business (including through acquisitions) and cost savings, (x) our ability to successfully integrate acquisitions into our operations, (xi) the impact of impairment or other charges associated with exit activities, crop or facility damage or otherwise, (xii) the timing and cost of resolution of pending legal and environmental proceedings, (xiii) the impact of changes in tax accounting or tax laws (or interpretations thereof), and the impact of settlements of adjustments proposed by the Internal Revenue Service or other taxing authorities in connection with our tax audits, and (xiv) the cost and other implications of changes in regulations applicable to our business, including potential legislative or regulatory initiatives in the United States or elsewhere directed at mitigating the effects of climate change. All forward-looking statements in this report are based on information available to us on the date hereof, and we assume no obligation to update any such forward-looking statements.

The forward-looking statements are not guarantees of future performance and involve risks and uncertainties. It is important to note that our actual results may differ materially from those in the forward-looking statements as a result of various factors. The accompanying information contained in this Report, identifies important factors that could cause our actual results to differ materially from those in the forward-looking statements.

The volume data included in this Report has been obtained from our records. Except for volume data for Fresh Del Monte, the market share, volume and consumption data contained in this Report have been compiled by us based upon data and other information obtained from third-party sources, primarily from the Food and Agriculture Organization of the United Nations (the "FAO"), and from our surveys of customers and other company-compiled data. Except as otherwise indicated, volume data contained in this Report is shown in millions of 40-pound equivalent boxes.

Table of Contents

PART I

Item 1. Business

History and Development of Fresh Del Monte

Our legal name is Fresh Del Monte Produce Inc., and our commercial name is Del Monte Fresh Produce. We are an exempted holding company, incorporated under the laws of the Cayman Islands on August 29, 1996. At December 30, 2011, the close of our most recent fiscal year, members of the Abu-Ghazaleh family directly owned 34.7% of our outstanding Ordinary Shares.

Our principal executive office is located at Walker House, 87 Mary Street, George Town, Grand Cayman, KY1-9002, Cayman Islands. The address of our U.S. executive office is Del Monte Fresh Produce Company, 241 Sevilla Avenue, Coral Gables, Florida 33134. Our telephone number at our U.S. executive office is (305) 520-8400. Our Internet address is <http://www.freshdelmonte.com>. The electronic version of this Annual Report on Form 10-K, along with other information about us, our operations and our results and other documents filed with the Securities and Exchange Commission (“SEC”) can be found on our Web site. Information on our Web site is not a part of this Report on Form 10-K.

Our global business, conducted through subsidiaries, is primarily the worldwide sourcing, transportation and marketing of fresh and fresh-cut produce together with prepared food products in Europe, Africa and the Middle East. We source our fresh produce products (bananas, pineapples, melons, tomatoes, grapes, apples, pears, peaches, plums, nectarines, cherries, citrus, avocados, blueberries and kiwi) primarily from Central and South America, Africa, the Philippines, North America and Europe. We source our prepared food products primarily from Africa, Europe, the Middle East and Asia. Our products are sourced from company-owned operations, through joint venture arrangements and through supply contracts with independent producers. We distribute our products in North America, Europe, Asia, the Middle East, Africa and South America.

Our capital expenditures totaled \$79.4 million in 2011, consisting of approximately \$30.5, principally for improvements and expansion of production facilities in Costa Rica, Guatemala, North America and Chile related to the other fresh produce segment and \$26.2 for improvements and expansion of production facilities in Guatemala, Costa Rica and distribution facilities in North America and Saudi Arabia related to the banana segment. Our capital expenditures in 2011 also included \$22.7 million for improvements and expansion of production facilities in Jordan, Saudi Arabia, Kenya and Greece related to the prepared food segment. Our capital expenditures totaled \$70.8 million in 2010, consisting of approximately \$31.0 million, principally for expansion of production facilities in Guatemala, Costa Rica and Brazil combined with improvements to our port facilities in North America and distribution facilities in Saudi Arabia related to the banana segment. In 2010, we also spent approximately \$33.1 million principally for expansion of production facilities in Costa Rica, Guatemala, Chile and the Philippines and fresh-cut facilities in the United States and the United Kingdom related to the other fresh produce segment and \$6.7 million principally for expansion of production facilities in Kenya, Greece and Jordan related to the prepared food segment. Our capital expenditures totaled \$84.5 million in 2009, consisting of approximately \$51.4 million primarily for distribution centers in Saudi Arabia and for expansion of production facilities in Costa Rica, Guatemala, Brazil and the Philippines related to the banana segment, \$27.8 million principally for expansion of our pineapple operations in Costa Rica and the Philippines, expansion of non-tropical fruit operations in Chile and expansion of fresh-cut fruit facilities in North America and the United Kingdom related to the other fresh produce segment and \$5.3 million for expansion of production facilities in Jordan and Kenya related to the prepared food segment. The principal capital expenditures planned for 2012 consist primarily of the expansion and improvement of production facilities in Costa Rica, Guatemala, Chile, Kenya, Greece and the Philippines and for our distribution and fresh-cut facilities in North America and Saudi Arabia.

Business Overview

We are one of the world's leading vertically integrated producers, marketers and distributors of high-quality fresh and fresh-cut fruit and vegetables, as well as a leading producer and distributor of prepared fruit and vegetables, juices, beverages and snacks in Europe, Africa and the Middle East. We market our products worldwide under the DEL MONTE® brand, a symbol of product innovation, quality, freshness and reliability since 1892. Our global sourcing and logistics network allows us to provide regular delivery of consistently high-quality fresh produce, juices, beverages, processed fruit and vegetables and value-added services to our customers.

Table of Contents

We have leading market positions in the following product categories. We believe we are:

- the number one marketer of fresh pineapples worldwide, including our Del Monte Gold®Extra Sweet pineapple;
- the third-largest marketer of bananas worldwide;
- a leading marketer of branded fresh-cut fruit in the United States, the United Kingdom, United Arab Emirates and Saudi Arabia;
- a leading re-packer of tomatoes in the United States;
- a leading year-round marketer of branded grapes in the United States;
- a leading marketer of branded non-tropical fruit in selected markets; and
- a leading marketer for branded canned fruit and pineapple in the European Union (EU) and other European markets and the Middle East.

We source and distribute our fresh produce products on a global basis. Our products are grown primarily in Central and South America, Africa and the Philippines. We also source products from North America and Europe. Our products are sourced from company-controlled farms and independent growers. At year end 2011, we transported our fresh produce to markets using our fleet of 12 owned and 12 chartered refrigerated vessels, and we operated four port facilities in the United States. We also operated 42 distribution centers, generally with cold storage and banana ripening facilities in our key markets worldwide, including the United States, the United Kingdom, Germany, Japan, South Korea, Hong Kong, Poland, the United Arab Emirates and Saudi Arabia. We also operate 15 fresh-cut facilities in the United States, the United Kingdom, Japan, the United Arab Emirates and Saudi Arabia, some of which are located within our distribution centers. Through our vertically integrated network, we manage the transportation and distribution of our products in a continuous temperature-controlled environment. This enables us to preserve quality and freshness, and to optimize product shelf life, while ensuring timely and year-round distribution. Furthermore, our position as a volume producer and shipper of bananas allows us to lower our average per-box logistics cost and to provide regular deliveries of our premium fresh fruit to meet the increasing demand for year-round supply.

We market and distribute our products to retail stores, food clubs, wholesalers, distributors and foodservice operators in more than 100 countries around the world. North America is our largest market, accounting for 50% of our net sales in 2011. Europe, Asia and the Middle East regions are our other major markets, accounting for 24%, 12% and 12% of our net sales in 2011, respectively. Our distribution centers and fresh-cut facilities address the growing demand from supermarket chains, club stores, foodservice providers mass merchandisers and independent grocers to provide value-added services, including the preparation of fresh-cut produce, ripening, customized sorting and packing, just-in-time and direct-store-delivery and in-store merchandising and promotional support. Large national chains are increasingly choosing fewer suppliers – ones that can serve all of their needs on a national basis – and we believe that there is a significant opportunity for a company with a full fresh and fresh-cut produce line, a well-recognized brand, a consistent supply of quality produce and a national distribution network to become the preferred supplier to these large retail and foodservice customers. We believe that we are uniquely positioned as a preferred supplier, and our goal is to expand on this status by increasing our leading position in fresh-cut produce, expanding our banana and pineapple business and diversifying our other fresh produce selections. We are a multinational company offering a variety of fresh produce in all major markets along with fresh-cut produce in selected markets and a prepared food product line that includes prepared fruit and vegetables, juices, beverages and snacks in Europe, Africa, the Middle East and countries formerly part of the Soviet Union.

Our strategy is focused on a combination of maximizing revenues from our existing infrastructure, entering new markets and strict cost control initiatives. We plan to continue to capitalize on the growing global demand for fresh produce and expand our reach into existing and new markets. We expect sales growth of fresh produce in key markets by increasing sales volume and per unit sales prices as permitted by market conditions. Our strategy includes increasing volumes from existing production and distribution facilities in order to improve operating efficiencies and reduce per unit costs. We plan additional investments in production facilities in order to expand our product offering in established markets and continue with our recent expansion in growth markets, such as the Middle East, Africa and countries formerly part of the Soviet Union.

Products Sourcing and Production

Our products are grown and sourced primarily in Central and South America, Africa and the Philippines. We also source products from North America and Europe. In 2011, 48% of the fresh produce we sold was grown on company-controlled farms and the remaining 52% was acquired through supply contracts with independent growers. Costa Rica is our most significant

Table of Contents

sourcing location representing approximately 35% of our total sales volume of fresh produce products and where we have 43% of our property, plant and equipment in 2011.

We produce, source, distribute and market a broad array of fresh produce throughout the world, primarily under the DEL MONTE® brand, as well as under other proprietary brands, such as UTC® and Rosy®. We also produce, distribute and market prepared fruits and vegetables, juices, beverages and snacks under the DEL MONTE® brand, as well as other proprietary brands, such as Fruit Express™, Just Juice® and other regional trademarks in Europe, Africa, the Middle East and countries formerly part of the Soviet Union.

The following table indicates our net sales by product for the last three years:

	Year ended								
	December 30, 2011			December 31, 2010			January 1, 2010		
	(U.S. dollars in millions)								
Net sales by product category:									
Banana	\$1,653.1	46	%	\$1,620.3	46	%	\$1,510.9	43	%
Other fresh produce:									
Gold pineapples	529.3	15	%	506.3	14	%	475.6	14	%
Fresh-cut produce	353.8	10	%	317.3	9	%	314.8	9	%
Non-tropical fruit	333.7	9	%	293.0	8	%	278.6	8	%

Tomatoes	104.8	3	%	114.3	3	%	120.0	3	%
Vegetables	64.4	2	%	65.4	2	%	68.4	2	%
Other fruit, products and services	72.3	2	%	97.0	3	%	148.6	4	%
Total other fresh produce	1,581.6	44	%	1,572.8	44	%	1,648.1	47	%
Prepared food	355.0	10	%	359.8	10	%	337.4	10	%
Total	\$3,589.7	100	%	\$3,552.9	100	%	\$3,496.4	100	%

See Note 22, “Business Segment Data”, to the Consolidated Financial Statements included in Item 8. Financial Statements and Supplementary Data for further information.

Bananas

Bananas are the leading internationally traded fresh fruit in terms of volume and dollar sales and the best-selling fresh fruit in the United States. Europe and North America are the world’s largest banana markets and Asia is the third largest market. According to the latest published statistics from the Food and Agriculture Organization of the United Nations (“FAO”), in 2009, Europe, North America, Asia and the Middle East consumed 18.3, 9.0, 4.6 and 1.7 billion pounds of bananas, respectively. Bananas are a key produce department product due to their high turnover and the premium margins realized by retailers.

Bananas have a relatively short growing cycle and are grown in tropical locations with humid climates and heavy rainfall, such as Central and South America, the Caribbean, the Philippines and Africa. Bananas are grown throughout the year in these locations, although demand and prices fluctuate based on the relative supply of bananas and the availability of seasonal and alternative fruit.

We believe that we are the world’s third-largest marketer of bananas, based on internally generated data. Our banana sales in North America, Europe, Asia and the Middle East accounted for approximately 47%, 22%, 18% and 11% of our net sales of bananas in 2011, respectively. We produced approximately 40% of the banana volume we sold in

2011 on company-controlled farms, and we purchased the remainder from independent growers.

Bananas are the best-selling fresh produce item, as well as a high-margin product for many of our customers. Accordingly, our ability to provide our customers with a year-round supply of high-quality DEL MONTE® bananas is important to maintaining our existing customer relationships and attracting new customers. Our position as a volume shipper of bananas has also allowed us to make regular shipments of a wide array of other fresh produce, such as pineapples, melons and plantains, reducing our average per-box logistics costs and maintaining higher quality produce with a longer shelf life.

3

Table of Contents

We produce bananas on company-controlled farms in Costa Rica, Guatemala, Brazil, Cameroon and the Philippines and we purchase bananas from independent growers in Costa Rica, Ecuador, Colombia, Guatemala and the Philippines. Although our supply contracts are primarily long-term, we also make purchases in the spot market, primarily in Ecuador. In Ecuador and Costa Rica, there are minimum export prices for the sale of bananas, which are established and reviewed on a periodic basis by the respective governments.

Due in part to limitations in the Philippines on foreign ownership of land, we purchase the majority of bananas in the Philippines through long-term contracts with independent growers. Approximately 83% of our Philippine-sourced bananas are supplied by one grower, representing 15% of the Philippines banana industry volume in 2011. In the Philippines, we have leased approximately 1,200 hectares of land where we have planted approximately 880 hectares of bananas for the Asia market.

Gold Pineapples

Pineapples are grown in tropical and sub-tropical locations, including the Philippines, Costa Rica, Hawaii, Thailand, Malaysia, Brazil, Indonesia and various countries in Africa. In contrast to bananas, pineapples have a long growing cycle of 18 months, and require re-cultivation after one to two harvests. Pineapple growing requires a higher level of capital investment, as well as greater agricultural expertise.

The premium pineapples, such as our Del Monte Gold® Extra Sweet pineapple, which has enhanced taste, golden shell color, bright yellow flesh and higher vitamin C content, has replaced the Champaka and other traditional pineapple varieties in popularity and demand and has led to increased competition.

We believe we are the market leader of fresh pineapples worldwide, based on internally generated data. Pineapple sales in North America, Europe, Asia and the Middle East accounted for 52%, 26%, 16% and 5%, respectively, of our net sales of pineapples in 2011. From 1996 to 2011, our volume of the Del Monte Gold® Extra Sweet pineapple increased from two and a half million boxes to 30.9 million boxes. Our pineapple sales volume increased by 6% in 2011. Based on FAO data, for the 10-year period from 1999 to 2009, the volume of pineapple sales in the United States, Europe, Asia and the Middle East increased by 156%, 163% and 61% and 713%, respectively. We believe that a substantial portion of this growth is due to our introduction of the Del Monte Gold® Extra Sweet pineapple. As a result of our continued expansion of existing pineapple operations, we expect to continue to increase the sales volume of our extra sweet pineapples in the near future with extra sweet pineapples grown in Costa Rica and the Philippines.

The principal production and procurement areas for our gold pineapples are Costa Rica and the Philippines. Given the complexity of pineapple cultivation relative to our bananas, a higher percentage of the fresh pineapples we sell (83% by volume in 2011) are produced on company-controlled farms.

Fresh-Cut Produce

Fresh-cut produce first gained prominence in many U.S. and European markets with the introduction of washed and cut vegetables. While packaged salads continue to lead the category of fresh-cut produce sales, the category has expanded significantly to include gold extra sweet pineapples, melons, mangos, grapes, citrus and assorted vegetable produce items that are washed, cut and packaged in a ready-to-use form. Market expansion has been driven largely by consumer demand for fresh, healthy and ready-to-eat food alternatives, as well as significant demand from foodservice operators. Within this market, we believe that there has been increasing differentiation between companies active primarily in the packaged salad market and other companies, like us, that can offer a wide variety of fresh-cut fruit and vegetable items.

The majority of fresh-cut produce is sold to consumers through retail and club store settings, as well as non-conventional settings such as convenience stores, gas stations and airports. We believe that outsourcing by food retailers will increase, particularly as food safety regulations become more stringent and retailers demand more value-added services. We believe that this trend should benefit large branded suppliers like us, who are better positioned to invest in fresh-cut facilities and to service regional and national chains and foodservice operators, as well as supercenters, mass merchandisers and club stores. We also believe that large branded suppliers benefit from merchandising, branding and other marketing strategies for fresh-cut products, similar to those used for branded processed food products, which depend substantially on product differentiation.

We believe that the fresh-cut produce market continues to be one of the fastest-growing categories in the fresh produce segment, largely due to consumer trends favoring healthy and conveniently packaged ready-to-eat foods. We established a platform in this industry through acquisitions and by building upon our existing fresh-cut pineapple business. We believe that our experience in this market, coupled with our sourcing and logistics capabilities and the DEL MONTE® brand, have enabled us to achieve a

Table of Contents

leading position in this highly fragmented market. Based on the latest supermarket scan data as supplied by an independent market data provider for 2011, we believe that we continue to be the market leader in branded fresh-cut fruit in the United States. Our fresh-cut fruit products include pineapples, melons, grapes, citrus, apples, mangos, kiwis and other fruit items. The fruit we use in our fresh-cut operations are sourced within our integrated system of company-controlled farms and from GAP-certified (good agricultural practices) independent growers. We also offer fresh-cut vegetables for prepared salads, such as coleslaw and potato salad. We purchase our vegetables for these purposes from GAP-certified independent growers in the United States and in Europe. Our purchase contracts for both fruit and vegetables are typically short-term but vary by produce item. Our fresh-cut products are sold in the United States, the United Kingdom, the Middle East and Japan.

Non-Tropical Fruit

Non-tropical fruit includes grapes, apples, pears, peaches, plums, nectarines, cherries, avocados, citrus and kiwis. Generally, non-tropical fruit grows on trees, bushes or vines that shed their leaves seasonally. Approximately 39% of our non-tropical fruit net sales are from grapes. Fresh grapes are a favorite quick, easy and healthy snack among consumers young and old. In addition to their taste, a growing body of research on fresh grapes suggests that grapes may offer significant health benefits as well. Fresh grapes are a well-known fruit worldwide, fitting into almost any lifestyle. Based on the United States Department of Agriculture (“USDA”), Economic Research Service, fresh grape consumption grew 10% between 1998 and 2009 in the United States and, on average, Americans consumed approximately 7.9 pounds of fresh grapes in 2009. Fresh grapes are also processed for the production of wine, raisins, juices and canned products. The higher production cost and higher product value of fresh grapes result from more intensive production practices than are required for grapes grown for processing. While California supplies the majority of total grape volume, imports have made fresh grapes available year-round in the United States, with shipments mostly from Chile. Most U.S. production is marketed from May to October. Chilean grapes dominate the market from December to April.

Approximately 21% of our non-tropical fruit net sales are from the sale of avocados. According to the latest published statistics from the USDA, for the 10-year period from 2000 to 2010, avocado imports to the United States increased by 412%. Per capita consumption of avocados in the United States also increased significantly in the last 10 years. According to the Economic Research Service of the USDA, per capita consumption of avocados reached approximately 4.1 pounds during 2009.

We sell a variety of non-tropical fruit, including all of the types referred to above. In 2011, non-tropical fruit sales in North America, Europe, the Middle East, Asia and South America accounted for approximately 54%, 7%, 21%, 12% and 6%, respectively, of our total net sales of non-tropical fruit. We obtain our supply of non-tropical fruit from company-owned farms in Chile and from independent growers in Chile, the United States, Mexico, Spain and New Zealand. In Chile, we purchase non-tropical fruit from independent growers and also produce a variety of non-tropical fruit on approximately 5,100 acres of company-owned or leased land. Our avocados are sourced principally from Mexico. In Mexico, we have our own sourcing operations, ensuring a consistent supply of high-quality non-tropical fruit during the growing season. Purchase contracts for non-tropical fruit are typically made on an annual basis.

Melons

Based on FAO data, for the 10-year period from 1999 to 2009, the volume of imports of cantaloupes and other melons increased in Europe and the Middle East by 50%, 122%, respectively, and decreased by 3% in North America and 12% in Asia. Melons are one of the highest volume fresh produce items, and this category includes many varieties, such as cantaloupe, honeydew, specialty melons and watermelon. During the summer and fall growing seasons in the United States, Canada and Europe, demand is met in large part by local suppliers of unbranded or regionally branded

melons. By contrast, in North America and Europe, imports significantly increase, and melons generally command premium pricing from November to May. Melons are grown in temperate and tropical locations and have a relatively short growing cycle.

We sell a variety of melons including cantaloupe, honeydew, MAG[®] melon, watermelon and specialty melons, which we introduced to meet the different tastes and expectations of consumers in Europe. Cantaloupes represented approximately 74% of our melon sales volume in 2011. We are a significant producer and distributor of melons from November to May in North American and European regions by sourcing melons from our company-controlled farms and independent growers in Central America, where production generally occurs during this period. Melons sold in North America and Europe from November to May generally command a higher price due to fewer operators and the availability of alternative fruits. Melon sales in North America and Europe accounted for 87% and 12%, respectively, of our net sales of melons in 2011. In terms of volume, we produced 92% of the melons we sold in 2011 on company-controlled farms and purchased the remainder from independent growers.

Table of Contents

We are able to provide our customers in North America with a year-round supply of melons from diverse sources. For example, we supply the North American market during its summer season with melons from Arizona, California and the East Coast of the United States.

We have devoted significant research and development efforts towards maintaining our expertise in melons, especially cantaloupes. Melon crop yields are highly sensitive to weather conditions and are adversely affected by high levels of precipitation during the growing period of the fruit. We have developed specialized melon growing technology that we believe has reduced our exposure to the risk of intemperate weather conditions and significantly increased our yields. In recent years, there has been an industry over-supply of melons. Accordingly in 2011, we rationalized our melon operations in Central America by reducing production volumes.

Tomatoes

The United States is one of the largest producers of tomatoes in the world, ranking second to China. Mexico and Canada are also important suppliers of fresh tomatoes within North America. Based on information from *The Packer*, an industry publication, in 2010, fresh tomatoes remained a top performer for food retailers, generating approximately 7.5% of a retailers' total produce sales.

We source our tomatoes mainly from the United States, Mexico, Canada, Guatemala and El Salvador. The tomato category is highly fragmented with many suppliers, re-packers and wholesalers in various geographic regions of the United States. As a high volume item, tomatoes are important for our network of distribution and re-packing facilities. This product category allows us to add value through leveraging our purchase volumes to reduce costs and perform the sorting, packaging and custom labeling locally, in addition to delivering on a just-in-time basis to retail chains and foodservice customers. With our fresh-cut fruit and vegetable facilities, we can add additional value by incorporating tomatoes into our consumer-packaged products. We have developed greenhouse tomato operations in Guatemala where we source volume for the North America market.

Vegetables

We distribute and market a variety of vegetables including potatoes, onions, bell peppers and cucumbers. While we sell bulk product, we also use our size and distribution network to find opportunities to add value such as sorting and packaging. We source our vegetables from independent growers in North and Central America.

Other Fruit, Products and Services

We produce, distribute and market a variety of other fruit, including strawberries, plantains and mangos, as well as various other varieties of fruit. We source these other fruit items from company controlled farms and independent growers in Costa Rica, Colombia, Guatemala and the United States.

Included in Other Fruit, Products and Services is also our third-party ocean freight business, our third-party plastics and box manufacturing business and our Argentine grain business. Our third-party ocean freight business allows us to generate incremental revenue on vessels' return voyages to our product sourcing locations and when space is available on outbound voyages to our major markets, which reduces our overall shipping cost. As a result of unfavorable economic conditions, in the fourth quarter of 2009, we eliminated our third-party ocean freight service from North Europe to the Caribbean. Our plastics and box manufacturing business produces bins, trays, bags and boxes. Although this business is intended mainly to satisfy internal packaging requirements, we also sell these products to third parties. As a result of continued under-performance, in 2010, we discontinued our grain operation and sold our grain silos in Argentina.

Prepared Food

We have a royalty-free perpetual license to use the DEL MONTE® Trademark in connection with the production, manufacture, sale and distribution of prepared foods and beverages in over 100 countries throughout Western, Eastern and Central Europe, Africa, the Middle East and countries formerly part of the Soviet Union. In Europe, Del Monte is the premier brand with an over 85 year history associated with fruit-based or fruit-derived products and is the leading brand for canned fruit and pineapple in many Western European markets. The Del Monte brand has had a presence in the United Kingdom, the largest market, since 1926 and is perceived to be a quality brand with high consumer awareness. The Del Monte brand has a reputation with both consumers and retailers for value, quality and reliability.

Table of Contents

We produce, distribute and market prepared pineapple, peaches, fruit cocktail, pears, tomatoes, fruit juices and other fruit and vegetables. Our prepared pineapple products are primarily sourced from our own facility in Kenya and are also sourced from independent producers in Asia. Our deciduous prepared food products, which include peaches, fruit cocktail, pears and apricots are principally sourced from our own facility in Greece and contract growers in South Africa. Our tomato products are sourced from independent producers in Europe and the Middle East. We also distribute and market beverages, including ambient juices and juice drinks as well as various snacks. These products are sold primarily under the DEL MONTE® label and under the buyers' own label for major retailers. We also produce and market industrial products that are composed of fruit that has been processed in our production facilities in the form of purees, pulps and concentrates for further processing (juice, yogurt, cake manufacture, pizza, etc.) and for sale to the foodservice industry worldwide. We expect to continue investing in new product development to increase revenue, defend our premium price position and maintain market leadership in our product categories. We plan to expand our offerings in the snack category by offering multiple varieties and sizes of fruit and vegetables in plastic pots with new and improved recipes and various juice bars, targeting the convenience store and foodservice trade in selected European and Middle East markets.

Our prepared food segment also includes our Jordanian food business. This business includes a state-of-the-art vertically integrated poultry business, including poultry farms, feed mill, slaughterhouse and meat processing plant in Jordan. Our Jordanian poultry business is the leading provider of poultry products to retail stores and foodservice operators in that country. The meat processing operation provides meat products for the Jordanian market and to other Middle East and North African markets.

Logistics Operations

We market and distribute our products to retail stores, foodservice operators, wholesalers and distributors in over 100 countries around the world. As a result, we conduct complex logistics operations on a global basis, transporting our products from the countries in which they are grown to the many markets in which they are sold worldwide. Maintaining fruit at the appropriate temperature is an important factor in preventing premature ripening and optimizing product quality and freshness. Consistent with our reputation for high-quality fresh produce, we must preserve our fresh fruit in a continuous temperature-controlled environment, beginning with the harvesting of the fruit in the field through its distribution to our end markets.

We have a fully integrated logistics network, which includes land and sea transportation through a broad range of refrigerated environments in vessels, port facilities, containers, trucks and warehouses. Our objective is to maximize utilization of our logistics network to lower our average per-box logistics cost, while remaining sufficiently flexible to redeploy capacity or shipments to meet fluctuations in demand in our key markets. We believe that our control of the logistics process is a competitive advantage because we are able to continuously monitor and maintain the quality of our produce and ensure timely and regular distribution to customers on a year-round basis. Because logistics costs are also our largest expense other than our cost of products, we devote substantial resources to managing the scheduling and availability of various means of reliable transportation.

We transport our fresh produce to markets worldwide using our fleet of 12 owned and 12 chartered refrigerated vessels. During 2010, we sold four of our older, less efficient vessels and took delivery of two Japanese built vessels capable of carrying approximately 430,000 40-pound boxes of palletized and containerized fruit. We believe that our fleet of owned vessels, combined with longer-term charters, is effective in reducing our ocean freight costs and mitigates our exposure to the volatility of the charter market. We also operate a fleet of approximately 4,100 refrigerated containers, 34% are owned or under capital leases and the remaining 66% are under operating leases. Our logistics system is supported by various information systems. As a vertically integrated food company, managing the entire distribution chain from the field to the customer requires the technology and infrastructure to be able to meet our customers' complex delivery needs.

Sales and Marketing

DEL MONTE® is a 119-year old brand that is recognized by consumers worldwide for quality, freshness and reliability. We employ a variety of marketing tools, including but not limited to advertising, public relations and promotions, to reinforce our brand equity with consumers and the trade. Depending on the product and market, we also provide technical, logistical and merchandising support aimed at safeguarding the superior quality of our products to the ultimate consumer. Our sales and marketing activities are conducted by our sales force located at our sales offices worldwide and at each of our distribution centers. Our commercial efforts are supported by marketing professionals located in key markets and regional offices. A key element of our sales and marketing strategy is to use our distribution centers as a means of providing value-added services for our customers.

We actively support our customers through technical training in the handling of fresh produce, in-store merchandising support, joint promotional activities, market research and inventory and other logistical support. Since most of our customers carry only one branded product for each fresh produce item, our marketing and promotional efforts for fresh produce emphasize trade advertising and in-store promotions.

Table of Contents

We have an exclusive worldwide 10-year license to the Controlled Ripening Technology (“CRT[™]”), one of the most recent innovations in banana packaging. Launched in October 2009, the patent pending CRT[™] packaging was created for individual single-serve packages, 10-pound institutional pack and 40-pound bulk banana boxes. This packaging utilizes state-of-the-art technology to help improve the ripening and handling process while helping retailers increase banana sales, reduce product losses and maximize profits by extending the product’s yellow shelf life. It also allows us to deliver to our customers the highest quality fruit. As a result of this CRT[™] packaging, we are able to broaden our distribution channels to include vending machines and expand our product offerings to our convenience store and foodservice customer base.

The level of marketing investment necessary to support the prepared food business is significantly higher than that required for the fresh produce and fresh-cut fruit and vegetable business. We have utilized a variety of promotional tools to build the DEL MONTE[®] brand and engage consumers in key markets in Europe, Africa and the Middle East. In recent years, we implemented a new strategy for the prepared food business in certain key European markets consisting of utilizing distributors to perform product distribution, sales and marketing activities. Under these agreements, the sales, warehousing, logistics, marketing and promotion functions are all performed by the distributor. This strategy of utilizing independent distributors enables us to reduce distribution and sales and marketing expenses. In addition, we plan to expand our prepared food business by entering new markets in Eastern Europe, Africa and the Middle East and by expanding our offerings in the snack category, targeting the convenience store and foodservice trade in selected European and Middle East markets.

During 2011, one customer, Wal-Mart, Inc. (including its affiliates), accounted for approximately 12% of our total net sales. These sales are reported in our banana, other fresh produce and prepared food segments. No other customer accounted for 10% or more of our net sales. In 2011, the top 10 customers accounted for approximately 32% of our net sales.

Note 22, “Business Segment Data” included in Item 8. Financial Statements and Supplementary Data contains information regarding net sales to external customers attributable to each of our reportable segments and geographic regions, gross profit by each of our reportable segments, total assets attributable to each of our geographic regions, and information concerning the dependence of our reportable segments on foreign operations, for each of the years 2011, 2010 and 2009.

North America

In 2011, 50% of our net sales were in North America. In North America, we have established a highly integrated sales and marketing network that builds on our ability to control transportation and distribution throughout our extensive logistics network. We operate a total of 22 distribution centers and fresh-cut facilities in the United States. Our distribution centers have ripening capabilities and/or other value-added services. We also operate four port facilities, which include cold storage facilities.

Our logistics network provides us with a number of sales and marketing advantages. For example, because we are able to maintain the quality of our fresh produce in a continuous temperature-controlled environment, we are under less pressure to fully sell a shipment prior to its arrival at port. We are thus better able to manage the timing of our sales to optimize margins. Our ability to off-load shipments for cold storage and distribution throughout our network also improves ship utilization by minimizing in-port docking time. Our logistics network also allows us to manage our inventory among distribution centers to respond more effectively to fluctuations in customer demand in the regions we serve.

We have sales professionals in locations throughout the United States and in Canada. We sell to leading grocery stores and other retail chains, wholesalers, mass merchandisers, supercenters, foodservice operators, club stores and distributors in North America. These large customers typically take delivery of our products at the port facilities, which we refer to as FOB delivery. We also service these large customers, as well as an increasing number of smaller regional chains and independent grocers, through our distribution centers.

Europe

In 2011, 24% of our net sales were made in Europe. We distribute our fresh produce and prepared food products throughout Europe. Our fresh produce products are distributed to leading retail chains, smaller regional customers as well as to wholesalers and distributors through direct sales and distribution centers. In the United Kingdom, we operate two fresh-cut facilities. In Germany, we operate three distribution centers and in Poland we operate two distribution centers. In the Netherlands, we have a sales and marketing entity. In Southern Europe, we distributed our fresh produce through an independent marketing company. Commencing in 2012, we began performing our own fresh produce distribution in these markets by establishing our own sales and marketing organization and as a result, we have expanded our sales and marketing organization in France and Spain. In Italy and the remaining Southern European countries, we also use various independent distributors. Our prepared food products are distributed through independent distributors throughout most of Europe, except in Germany, France and Poland where we use

Table of Contents

our own sales and marketing entities. In the United Kingdom our prepared food products are distributed using a combination of both independent distributors and our own marketing entities.

Middle East and North Africa

In 2011, 12% of our net sales were made in the Middle East and North Africa. We distribute our products through independent distributors and company-operated distribution facilities. We have increased our banana sales in the Middle East market through distributors and established our own direct sales initiatives. Our distribution/manufacturing center in Dubai, United Arab Emirates (“UAE”) is a state-of-the-art facility with just-in-time delivery capabilities that includes banana ripening and cold storage facilities, fresh-cut fruit and vegetable operations and an ultra-fresh juice manufacturing operation. We distribute these products in the UAE and export them to other Middle East countries. We also operate a distribution center in Abu-Dhabi, UAE that includes banana ripening and cold storage facilities. In Saudi Arabia, through our 60%-owned joint venture, we have implemented an expansion program that included the construction of two distribution centers with banana ripening, cold storage facilities and fresh-cut fruit, vegetable operations and manufacturing capabilities for juices, potatoes and sandwiches. One of the distribution centers, located in Riyadh, the capital city of Saudi Arabia, was completed in 2009 while the second one, located in Jeddah, was completed in 2010. These strategically located distribution centers distribute our fresh produce products to this growing market. In addition, we market and distribute prepared food products in the UAE, Jordan, Saudi Arabia and various other Middle East and North African markets. We have also established a presence in Egypt where we market and distribute our prepared food products, mainly our juice product line. In Jordan, we own a state-of-the-art vertically integrated poultry business including poultry farms, feed mill, slaughterhouse and meat processing plant. We are the leading provider of poultry products to retail stores and foodservice operators in that country. In recent years, we have expanded our food business in Jordan with the addition of the meat processing operation that provides meat products for the local market and for export to other Middle East and North African markets. We believe that the Middle East, North Africa and countries formerly part of the Soviet Union represent an area for rapid sales development of our fresh and prepared food products. Utilizing our extensive knowledge of this region, we plan to capitalize on this opportunity with increased focus and investments in these markets.

Asia

In 2011, 12% of our net sales were made in Asia. We distribute our products in Asia through direct marketing and large distributors. Our principal markets in this region are Japan, South Korea, mainland China and Hong Kong. In Japan, we distributed approximately 91% of the products we sold in 2011 through direct sales and the remainder through Japan’s largest fresh produce wholesaler, which distributes our products on a sales commission basis. Our products are distributed from four distribution centers located at strategic ports in Japan with cold storage and banana ripening operations.

We also engage in direct sales and marketing activities in South Korea and Hong Kong. In other Asian markets, including mainland China, we sell to local distributors. We have one distribution center and banana ripening facility in Hong Kong. In South Korea, we have three distribution centers that utilize state-of-the art ripening technology. This increases our ability to offer value-added services to our customers.

South America

We also distribute our products in South America. We have direct sales and marketing activities in strategic markets and also utilize local distributors in this region. Our sales in these markets focus mainly on non-tropical fruit including grapes, apples, pears, peaches, plums, cherries, kiwi and nectarines.

Competition

We compete based on a variety of factors, including the appearance, taste, size, shelf life and overall quality of our fresh produce, price and distribution terms, the timeliness of our deliveries to customers and the availability of our produce items. The fresh produce business is highly competitive, and the effect of competition is intensified because our products are perishable. Competition in the sale of bananas, pineapples, melons and the other fresh fruit and vegetables that we sell comes from competing producers and distributors. Our sales are also affected by the availability of seasonal and alternative produce. While historically our main competitors have been multinational banana and pineapple producers, our significantly increased product offering in recent years has resulted in additional competition from a variety of companies. These companies include local and regional producers and distributors in each of our fresh produce and fresh-cut product categories.

Table of Contents

The extent of competition varies by product. In the pineapple and non-tropical fruit markets, we believe that the high degree of capital investment and cultivation expertise required, as well as the longer length of the growing cycle, makes it relatively difficult to enter the market. However, in recent years we have experienced an increase in competition with our Del Monte Gold ® Extra Sweet pineapple, which has negatively affected our results.

In the banana market, we continue to face competition from a limited number of large multinational companies. At times, particularly when demand is greater than supply, we also face competition from a large number of relatively small banana producers. Unlike the pineapple and non-tropical fruit markets, there are few barriers to entry into the banana market. Supplies of bananas can be increased relatively quickly due to bananas relatively short growing cycle and the limited capital investment required for banana growing. As a result of changes in supply and demand, as well as seasonal factors, banana prices fluctuate significantly.

In the melon market, we compete with producers and distributors of both branded and unbranded melons. From June to October, the peak North American and European melon-growing season, many growers enter the market with less expensive unbranded or regionally branded melons due to the relative ease of growing melons during this period, the short growth cycle and reduced transportation costs resulting from the proximity of the melon farms to the markets. These factors permit many smaller domestic growers to enter the market. During the offshore growing season from October to May, we compete with growers principally in Central America. In recent years, there has been an abundant supply of melons in the market during the offshore growing season, which has negatively affected our results.

The fresh-cut produce market is highly fragmented, and we compete with a wide variety of local and regional distributors of branded and unbranded fresh-cut produce and, in the case of certain fresh-cut vegetables, a small number of large, branded producers and distributors. In this market, however, we believe that our principal competitive challenge is to capitalize on the growing trend of retail chains and independent grocers to outsource their own on-premises fresh-cut operations. We believe that our sales strategy, which emphasizes not only our existing sources of fresh produce, but also a full range of value-added services, strict compliance with food safety standards and our national distribution capability, positions us to gain an increasing share of this market.

The processed fruit and beverage markets are mature markets characterized by high levels of competition and consumer awareness. Consumer choices are driven by price and/or quality. Large retailers with their “buyers own label” (“BOL”) products appeal to price-conscious consumers, while brand names are the key differentiator for quality-focused consumers. In the processed food and beverage markets in Europe, Africa and the Middle East, we compete with various local producers, large retailers with their BOL products, as well as with large international branded companies. It is in the branded section that our processed foods products, specifically, canned fruit and pineapple in many European countries, hold a leading position in the markets. The mature state of the market in Western Europe, together with the strength and sophistication of the large retailers there, account in part for the increasing presence of BOL products in many food and beverage categories. In the past few years, we have faced increased competitive pressure, particularly in the U.K. market, for branded processed food and beverage products. At the same time, our marketing and distribution costs in these European markets have increased. In order to reduce costs and increase our competitiveness in the processed food business, we decided to use distributors in certain key European markets to perform product distribution and sales and marketing activities. Under these arrangements, the sales, warehousing, logistics, marketing and promotion functions are all performed by the distributor. In the United Kingdom and Italian markets we have also outsourced our beverage production. This strategy takes advantage of lower cost and established marketing and distribution networks and enables us to reduce costs and increase our competitiveness in these mature markets.

Quality Assurance

To ensure the consistent high quality of our products, we have a quality assurance group that maintains detailed quality specifications for all our products so that they meet or exceed minimum regulatory requirements. Our specifications require extensive sampling of our fresh produce at each stage of the production and distribution processes to ensure high quality and proper sizing, as well as to identify the primary sources of any defects. Our fresh produce is evaluated based on both external appearance and internal quality, using size, color, porosity, translucence and sweetness as criteria. Only fresh produce meeting our stringent quality specifications is sold under the DEL MONTE® brand.

We are able to maintain the high quality of our products by growing a substantial portion of our own produce and working closely with our independent growers. We insist that all produce supplied by our independent growers meet the same stringent quality requirements as produce grown on our farms. Accordingly, we monitor our independent growers to ensure that their produce will meet agricultural and quality control standards, offer technical assistance on certain aspects of production and packing and, in some cases, manage the farms. The quality assurance process begins on the farms and continues as harvested products enter our packing facilities. Where appropriate, we cool the fresh produce at our packing facilities to maximize quality and optimize shelf life. As an indication of our commitment to quality, many of our operations have received certificates of compliance from

Table of Contents

the International Standards of Operation, in environmental compliance (14001) and production processes (9001). In 2003, we became the world's first multinational fresh produce company to receive GlobalGap certification. In 2011, all of our operations that produce or handle high risk foods (tomatoes, melons or leafy greens) achieved certification to the Hazard Analysis & Critical Control Points ("HACCP") based safe quality food standard. HACCP is a management system in which food safety is addressed through the analysis and control of biological, chemical and physical hazards from raw material production, procurement and handling, to manufacturing, distribution and consumption of the finished product. Taken together, these certifications reflect our commitment to quality and the strictest standards of food safety.

Government Regulation

Agriculture and the sale and distribution of fresh produce are subject to extensive regulation by government authorities in the countries where the produce is grown and the countries where such produce is marketed. We have internal policies and procedures to comply with the most stringent regulations applicable to our products, as well as a technical staff to monitor pesticide usage and compliance with applicable laws and regulations. We believe we are in material compliance with these laws and regulations.

We are also subject to various government regulations in countries where we market our products. The countries in which we market a material amount of our products are the United States, Canada, the countries of the European Union (the "EU"), Japan, China, South Korea, Jordan, the UAE and Saudi Arabia. These government regulations include:

- sanitary regulations, particularly in the United States and the countries of the EU;

- regulations governing pesticide use and residue levels, particularly in the United States, United Kingdom, Germany and Japan; and

- regulations governing traceability, packaging and labeling, particularly in the United States and the countries of the EU.

Any failure to comply with applicable regulations could result in an order barring the sale of part or all of a particular shipment of our products or, in an extreme case, the sale of any of our products for a specified period. In addition, we believe there has been an increasing emphasis on the part of consumers, as well as retailers, wholesalers, distributors and foodservice operators, on food safety issues, which could result in our business and operations being subject to increasingly stringent food safety regulations or guidelines.

Although the fresh-cut produce industry is not currently subject to any specific governmental regulations, we cannot predict whether or when any regulation will be implemented or the scope of any possible regulation.

European Union Banana Import Regulations

In November 2005, the EU agreed to reform its controversial banana import license regime. Latin America banana exporters and the United States long have complained that the EU's banana trading system favored African, Caribbean and Pacific countries ("ACP") in violation of global trade rules. From January 1, 2006, the quotas controlling import volumes of "third country" (almost exclusively Latin American) bananas coming into the EU were eliminated. Importers were required to pay a euro ("€") tariff of €176 per ton and a small guarantee of €15 per ton. Import licenses have been eliminated, but an import certificate is still required. The EU agreed to retain a duty-free quota of 775,000 tons per annum for bananas from ACP countries. In December 2007, most of the ACP countries, including Cameroon, signed a bilateral agreement with the EU that allows bananas duty free access to the EU market without any quantitative

limitation commencing on January 1, 2008. On December 15, 2009, the EU entered into an agreement with certain Latin America banana exporting countries to settle the long running dispute over banana import tariffs. This agreement was ratified in May 2010. Under this agreement, the EU gradually reduces import tariffs on bananas from Latin America on an annual basis. The the current level of €143 per ton in 2011 will be reduced to €114 per ton by 2017 as follows: 2012-€136, 2013-€132, 2014-€127, 2015-€122, 2016-€117 and 2017-€114. In addition, the EU has entered into Free Trade Agreements with Columbia, Peru and five Central American countries. Under these bilateral trade agreements, duties on bananas will fall progressively to €75 per ton by 2020. The EU continues to negotiate Free Trade Agreements with Latin America banana-producing countries and there is a possibility that some form of new EU banana tariff-rate quotas will be reinstated. We cannot predict the impact of these changes in banana import tariffs on the EU market.

Table of Contents

Environmental Proceedings

The management, use and disposal of some chemicals and pesticides are inherent aspects of our production operations. These activities and other aspects of production are subject to various environmental laws and regulations, depending upon the country of operation. In addition, in some countries of operation, environmental laws can require the investigation and, if necessary, remediation of contamination related to past or current operations. We are not a party to any dispute or legal proceeding relating to environmental matters where we believe that the risk associated with the dispute or legal proceeding would be material, except as described in Item 3. Legal Proceedings and Note 17, "Litigation" to the Consolidated Financial Statements included in Item 8. Financial Statements and Supplementary Data in connection with the Kunia Well Site.

On May 10, 1993, the EPA identified a certain site at our plantation in Hawaii for potential listing on the National Priorities List under the Comprehensive Environmental Response, Compensation and Liability Act of 1980, as amended. See Item 3. Legal Proceedings and Note 17, "Litigation" to the Consolidated Financial Statements included in Item 8. Financial Statements and Supplementary Data.

Research and Development, Patents and Licenses, Etc.

Our research and development programs have led to improvements in agricultural and growing practices and product packaging technology. These programs are directed mainly at reducing the cost and risk of pesticides, using natural biological agents to control pests and diseases, testing new varieties of our principal fruit varieties for improved crop yield and resistance to wind damage and improving post-harvest handling. We have also been seeking to increase the productivity of low-grade soils for improved banana growth and experimenting with various other types of fresh produce. Our research and development efforts are conducted by our staff of professionals and include studies conducted in laboratories, as well as on-site field analyses and experiments. Our research and development professionals are located at our production facilities and in the United States, and we provide our growers with access to improved technologies and practices. We operate research and development facilities in the San Francisco Bay area of California and Costa Rica where we conduct various research activities relating to the development of new fruit varieties.

Some of the research and development projects include:

- the development of the Del Monte Gold® Extra Sweet pineapple and other pineapple and melon varieties and
- improved irrigation methods and soil preparation for melon planting.

Our total corporate research and development expenses were \$3.6 million, \$3.4 million and \$3.2 million for 2011, 2010 and 2009, respectively, and are included in selling, general and administrative expenses in the Consolidated Financial Statements.

We have the exclusive right to use the DEL MONTE® brand for fresh fruit, fresh vegetables and other fresh and fresh-cut produce and certain other specified products on a royalty-free basis under a worldwide, perpetual license from Del Monte Corporation, an unaffiliated company that owns the DEL MONTE® trademark. Del Monte Corporation and several other unaffiliated companies manufacture, distribute and sell under the DEL MONTE® brand canned or processed fruit, vegetables and other produce, as well as dried fruit, snacks and other products. Our licenses allow us to use the trademark "DEL MONTE®" and the words "DEL MONTE®" in association with any design or logotype associated with the brand. The licenses also give us certain other trademarks and trademark rights, on or in connection with the production, manufacture, sale and distribution of fresh fruit, fresh vegetables, other fresh produce and certain other specified products. In addition, the licenses allow us to use certain patents and trade secrets in

connection with the production, manufacture, sale and distribution of our fresh fruit, fresh vegetables, other fresh produce and certain other specified products.

We have a royalty-free perpetual license to use the DEL MONTE® trademark in connection with the production, manufacture, sale and distribution of all food and beverage products in Europe, Africa, the Middle East and countries formerly part of the Soviet Union.

We also sell produce under several other brands for which we have obtained registered trademarks, including UTC®, Rosy®, Fruit Express®, Just Juice®, Fruitini® and other regional brands.

Table of Contents

Seasonality

In part as a result of seasonal sales price fluctuations, we have historically realized a greater portion of our net sales and of our gross profit during the first two calendar quarters of the year. The sales price of any fresh produce item fluctuates throughout the year due to the supply of and demand for that particular item, as well as the pricing and availability of other fresh produce items, many of which are seasonal in nature. For example, the production of bananas is continuous throughout the year and production is usually higher in the second half of the year, but the demand for bananas varies because of the availability of other fruit. As a result, demand for bananas is seasonal and generally results in higher sales prices during the first six months of the calendar year. We make most of our sales of non-tropical fruit from October to May. In the melon market, the entry of many growers selling unbranded or regionally branded melons during the peak North American and European melon growing season results in greater supply, and therefore lower sales prices, from June to October. As a result of greater demand during the fourth quarter, the prepared food business is expected to have higher net sales and gross profit during this period. These seasonal fluctuations are illustrated in the following table, which presents certain unaudited quarterly financial information for the periods indicated:

	Year ended December 30, 2011	December 31, 2010
Net sales:		
First quarter	\$974.0	\$943.1
Second quarter	1,039.7	1,000.0
Third quarter	795.2	793.1
Fourth quarter	780.8	816.7
Total	\$3,589.7	\$3,552.9
Gross profit:		
First quarter	\$122.8	\$97.8
Second quarter	102.9	83.0
Third quarter	62.9	52.0
Fourth quarter	30.9	39.6
Total	\$319.5	\$272.4

Employees

At year end 2011, we employed approximately 42,000 persons worldwide, substantially all of whom are year-round employees. Approximately 78% of these persons are employed in production locations. We believe that our overall relationship with our employees and unions is satisfactory.

Organizational Structure

We are organized under the laws of the Cayman Islands and, as set forth in our Amended and Restated Memorandum of Association, we are a holding company for the various subsidiaries that conduct our business on a worldwide basis. Our significant subsidiaries, all of which are directly or indirectly wholly owned, are:

Subsidiary	Country of Incorporation
Corporacion de Desarrollo Agricola Del Monte S.A.	Costa Rica
Del Monte B.V.	Netherlands

Web site Access to Reports

We file annual, quarterly and current reports, and amendments to those reports, proxy statements and other information with the SEC. You may access and read our filings without charge through the SEC's Web site at www.sec.gov. You may also read and copy any document we file with the SEC at the SEC's Public Reference Room located at 100 F Street, NE, Room 1580, Washington, D.C. 20549. Please call the SEC at 1-800-SEC-0330 for further information on the Public Reference Room.

Our annual reports on Form 10-K, quarterly reports on Form 10-Q, current reports on Form 8-K, and all amendments to those reports can be viewed on the Company's Web site at www.freshdelmonte.com as soon as reasonably practicable after such material is electronically filed with, or furnished to, the SEC. Information on our Web site is not a part of this Annual Report on Form 10-K.

In addition, copies of our annual report may be obtained free of charge at Fresh Del Monte Produce Inc., upon written request to attention: Investor Relations, c/o Del Monte Fresh Produce Company, 241 Sevilla Avenue, Coral Gables, Florida 33134.

Item 1A. Risk Factors

We are subject to many risks and uncertainties that may affect our future financial performance and our stock price. Some of the risks and uncertainties that may cause our financial performance to vary or that may materially or adversely affect our financial performance or stock price are discussed below.

We could realize losses and suffer liquidity problems due to declines in sales prices for bananas, pineapples and other fresh produce.

Our profitability depends largely upon our profit margins and sales volumes of bananas, pineapples and other fresh produce. In 2009, 2010 and 2011, banana sales accounted for the most significant portion of our total net sales, and historically pineapple sales have accounted for the most significant portion of our total gross profit.

Supplies of bananas can be increased relatively quickly due to the banana's relatively short growing cycle and the limited capital investment required for banana growing. As a result of imbalances in supply and demand and import regulations, banana prices fluctuate; consequently, our operating results could be adversely affected.

Sales prices for bananas, pineapples and other fresh produce are difficult to predict. It is possible that sales prices for bananas and pineapples will decline in the future, and sales prices for other fresh produce may also decline. In recent years, there has been increasing consolidation among food retailers, wholesalers and distributors. We believe the increasing consolidation among food retailers may contribute to further downward pressure on our sales prices. In the event of a decline in sales prices or sales volumes, we could realize significant losses, experience liquidity problems and suffer a weakening in our financial condition. A significant portion of our costs is fixed, so that fluctuations in the sales prices have an immediate impact on our profitability. Our profitability is also affected by our production costs, which may increase due to factors beyond our control.

Due to fluctuations in the supply of and demand for fresh produce, our results of operations are seasonal, and we realize a greater portion of our net sales and gross profit during the first two quarters of each year.

In part as a result of seasonal sales price fluctuations, we have historically realized a greater portion of our gross profit during the first two quarters of each year. The sales price of any fresh produce item fluctuates throughout the year due to the supply of and demand for that particular item, as well as the pricing and availability of other fresh produce

items, many of which are seasonal in nature. For example, the production of bananas is continuous throughout the year and production is usually higher in the second half of the year, but the demand for bananas during that period varies because of the availability of seasonal and alternative fruit. As a result, demand for bananas is seasonal and generally results in higher sales prices during the first six months of each calendar year. In the melon market, the entry of many growers selling unbranded or regionally branded melons during the peak North American and European melon growing season results in greater supply, and therefore, lower sales prices from June to October. In North American and European regions, we realize most of our sales and gross profit for melons, grapes and non-tropical fruit from November to May. In the prepared food business, we historically realize the largest portion of our net sales and gross profit in the third and fourth quarters of the year.

Table of Contents

Crop disease, severe weather, natural disasters and other conditions affecting the environment, including the effects of climate change, could result in substantial losses and weaken our financial condition.

Crop disease, severe weather conditions, such as floods, droughts, windstorms and hurricanes, and natural disasters, such as earthquakes, may adversely affect our supply of one or more fresh produce items, reduce our sales volumes, increase our unit production costs or prevent or impair our ability to ship products as planned. This is particularly true in the case of our premium pineapple product, the Del Monte Gold[®] Extra Sweet pineapple, because a substantial portion of our production is grown in one region in Costa Rica. Since a significant portion of our costs are fixed and contracted in advance of each operating year, volume declines due to production interruptions or other factors could result in increases in unit production costs, which could result in substantial losses and weaken our financial condition. We have experienced crop disease, insect infestation, severe weather and other adverse environmental conditions from time to time, including hurricanes, droughts, floods and earthquakes in our sourcing locations. Severe weather conditions may occur with higher frequency or may be less predictable in the future due to the effects of climate change. When crop disease, insect infestations, severe weather, earthquakes and other adverse environmental conditions destroy crops planted on our farms or our suppliers' farms or prevent us from exporting them on a timely basis, we may lose our investment in those crops or our purchased fruit cost may increase. In 2011, we incurred \$1.2 million in contract termination and severance costs related to crop disease in an isolated area of our Philippines banana operation.

The fresh produce and prepared food markets in which we operate are highly competitive.

The fresh produce and prepared food business is highly competitive, and the effect of competition is intensified because most of our products are perishable. In banana and pineapple markets, we compete principally with a limited number of multinational and large regional producers. In the case of our other fresh fruit and vegetable products, we compete with numerous small producers, as well as regional competitors. Our sales are also affected by the availability of seasonal and alternative fresh produce. The extent of competition varies by product. To compete successfully, we must be able to strategically source fresh produce and prepared food of uniformly high quality and sell and distribute it on a timely and regular basis. In addition, our profitability has depended significantly on our gross profit on the sale of our Del Monte Gold[®] Extra Sweet pineapples. Increased competition in the production and sale of Del Monte Gold[®] Extra Sweet pineapples has adversely affected our results. We expect these competitive pressures to continue.

We are subject to material currency exchange risks because our operations involve transactions denominated in various currencies.

We conduct operations in many areas of the world involving transactions denominated in various currencies, and our results of operations, as expressed in dollars, may be significantly affected by fluctuations in rates of exchange between currencies. Although a substantial portion of our net sales (42% in 2011) are denominated in non-dollar currencies, we incur a significant portion of our costs in dollars. Although we periodically enter into currency forward contracts as a hedge against currency exposures, we may not enter into these contracts during any particular period or these contracts may not adequately offset currency fluctuations. We generally are unable to adjust our non-dollar local currency sales prices to compensate for fluctuations in the exchange rate of the dollar against the relevant local currency. In addition, there is normally a time lag between our costs incurred and collection of the related sales proceeds. Accordingly, if the dollar appreciates relative to the currencies in which we receive sales proceeds, our operating results may be negatively affected. Our costs are also affected by fluctuations in the value, relative to the U.S. dollar, of the currencies of countries in which we have significant production operations, with a weaker dollar resulting in increased production costs.

Our strategy of diversifying our product line, expanding into new geographic markets and increasing the value-added services that we provide to our customers may not be successful.

We are diversifying our product line through acquisitions and internal growth. In addition, we have expanded our service offerings to include a higher proportion of value-added services, such as the preparation of fresh-cut produce, ripening, customized sorting and packing, direct-to-store delivery and in-store merchandising and promotional support. This strategy represents a significant departure from our traditional business of delivering our products to our customers at the port. In recent periods, we have made significant investments in distribution centers, fresh-cut and prepared food facilities through capital expenditures and have expanded our business into new geographic markets. We may not be successful in anticipating the demand for these products and services, in establishing the requisite infrastructure to meet customer demands or the provision of these value-added services. During recent years, we incurred significant asset impairment and other charges as a result of our continuing efforts to align our diversified product lines to meet market demand. During 2011, we incurred \$16.7 million in asset impairment charges principally related to our Central America melon program rationalization and for under-performing production facilities in the United Kingdom.

Table of Contents

If we are unable to recover from current challenging economic conditions in Europe, specifically in the United Kingdom, the prepared food goodwill and trademark may be at risk for impairment in the future and we could also incur additional asset impairments related to under-utilized facilities. If we are not successful in our diversification efforts, our business, financial condition or results of operations could be further materially and adversely affected.

The loss of one or more of our largest customers, or a reduction in the level of purchases made by these customers, could negatively impact our sales and profits.

Sales to Wal-Mart, Inc., our largest customer, amounted to approximately 12% of our total net sales in 2011 and our top 10 customers collectively accounted for approximately 32% of our total net sales. We expect that a significant portion of our revenues will continue to be derived from a relatively small number of customers. We believe these customers make purchase decisions based on a combination of price, product quality, consumer demand, customer service performance, desired inventory levels and other factors that may be important to them at the time the purchase decisions are made. Changes in our customers' strategies or purchasing patterns, including a reduction in the number of brands they carry, may adversely affect our sales. Additionally, our customers may face financial or other difficulties which may impact their operations and cause them to reduce their level of purchasing from us, which could adversely affect our results of operations. Customers also may respond to any price increase that we may implement by reducing their purchases from us, resulting in reduced sales of our products. If sales of our products to one or more of our largest customers are reduced, this reduction may have a material adverse effect on our business, financial condition, and results of operations. Any bankruptcy or other business disruption involving one of our significant customers also could adversely affect our results of operations.

Increased prices for fuel, packaging materials or short-term refrigerated vessel charter rates could increase our costs significantly.

Our costs are determined in large part by the prices of fuel and packaging materials, including containerboard, plastic, resin and tin plate. We may be adversely affected if sufficient quantities of these materials are not available to us. Any significant increase in the cost of these items could also materially and adversely affect our operating results. Other than the cost of our products (including packaging), sea and inland transportation costs represent the largest component of cost of products sold.

During 2010, the cost of fuel increased by 25% and containerboard increased by 7% as compared with 2009. During 2011, the cost of fuel increased by 37% and container board decreased by 8% as compared with 2010. In addition, we are subject to the volatility of the charter vessel market because 12 of our refrigerated vessels are chartered. These charters are for periods of three to 10 years. Charter rates have generally remained stable over the past three years. As a result, significant increases in fuel, packaging material and charter rates would materially and adversely affect our results.

Compliance with regulation aimed at mitigating the effects of climate change, as discussed elsewhere in these Risk Factors, could also increase the cost of fuel for our shipping and logistics operations. We might be unable to adjust our product pricing to reflect our increased costs. Even if we are able to adjust our product pricing, our customer's buying patterns could change to reflect a greater reliance on local production rather than imports.

We are subject to the risk of product contamination and product liability claims.

The sales of our products involve the risk of injury to consumers. Such injuries may result from tampering by unauthorized personnel, product contamination or spoilage, including the presence of foreign objects, substances, chemicals, or residues introduced during the growing, packing, storage, handling or transportation phases. While we are subject to governmental inspection and regulations and believe our facilities comply in all material respects with

all applicable laws and regulations, including internal product safety policies, we cannot be sure that consumption of our products will not cause a health-related illness in the future or that we will not be subject to claims or lawsuits relating to such matters. Even if a product liability claim is unsuccessful, the negative publicity surrounding any assertion that our products caused illness or injury could adversely affect our reputation with existing and potential customers and our brand image. In addition, claims or liabilities of this sort might not be covered by our insurance or by any rights of indemnity or contribution that we may have against others. We maintain product liability insurance in an amount that we believe is adequate. However, we cannot be sure that we will not incur claims or liabilities for which we are not insured or that exceed the amount of our insurance coverage, resulting in significant cash outlays that would materially and adversely affect our results and financial condition.

Table of Contents

We are subject to legal and environmental risks that could result in significant cash outlays.

We are involved in several legal and environmental matters that, if not resolved in our favor, could require significant cash outlays and could materially and adversely affect our results of operations and financial condition. In addition, we may be subject to product liability claims if personal injury results from the consumption of any of our products. In addition, although the fresh-cut produce market is not currently subject to any specific governmental regulations, we cannot predict whether or when any regulation will be implemented or the scope of any such regulation.

The U.S. Environmental Protection Agency (the "EPA") has placed a certain site at our former plantation in Oahu, Hawaii on the National Priorities List under the Comprehensive Environmental Response, Compensation and Liability Act of 1980. Under an order entered into with the EPA, we completed a remedial investigation and engaged in a feasibility study to determine the extent of the environmental contamination. The remedial investigation report was finalized in January 1999 and approved by the EPA in February 1999. A final draft feasibility study was submitted for EPA review in December 1999 and updated in December 2001 and October 2002, and approved by the EPA in April 2003. In September 2003, the EPA issued the Record of Decision ("ROD"). The EPA estimated in the ROD that the remediation costs associated with the cleanup of our plantation would range from \$12.9 million to \$25.4 million. Certain portions of the EPA's estimates were discounted using a 5% interest rate. The undiscounted estimates are between \$14.8 million to \$28.7 million. As of December 30, 2011, there is \$16.0 million included in other noncurrent liabilities and \$1.7 million included in accounts payable and accrued expenses in our Consolidated Balance Sheets relating to the Kunia well site clean-up, which we expect to expend in 2012. We expect to expend approximately \$0.5 million per year on this matter for the following four years. See Item 3. Legal Proceedings and Note 17, "Litigation" to the Consolidated Financial Statements included in Item 8. Financial Statements and Supplementary Data. In addition, we are involved in several actions in U.S. and non-U.S. courts involving allegations by numerous Central American and Philippine plaintiffs that they were injured by exposure to a nematocide containing the chemical Dibromochloropropane ("DBCP") during the 1970's. See Item 3. Legal Proceedings and Note 17, "Litigation" to the Consolidated Financial Statements included in Item 8. Financial Statements and Supplementary Data.

Environmental and other regulation of our business, including potential climate change regulation, could adversely impact us by increasing our production cost or restricting our ability to import certain products into the United States.

Our business depends on the use of fertilizers, pesticides and other agricultural products. The use and disposal of these products in some jurisdictions are subject to regulation by various agencies. A decision by a regulatory agency to significantly restrict the use of such products that have traditionally been used in the cultivation of one of our principal products could have an adverse impact on us. For example, most uses of methyl bromide, a pesticide used for fumigation of imported produce (principally melons) for which there is currently no known substitute, were phased out in the United States in 2006. However, various exemptions will allow its use offshore until 2015. Also, under the Federal Insecticide, Fungicide and Rodenticide Act, the Federal Food, Drug and Cosmetic Act and the Food Quality Protection Act of 1996, the EPA is undertaking a series of regulatory actions relating to the evaluation and use of pesticides in the food industry. Similarly, in the EU, regulation (EC) No. 1107/2009 which became effective on June 14, 2011, fundamentally changed the pesticide approval process from the current risk base to hazard criteria based on the intrinsic properties of the substance. These actions and future actions regarding the availability and use of pesticides could have an adverse effect on us. In addition, if a regulatory agency were to determine that we are not in compliance with a regulation in that agency's jurisdiction, this could result in substantial penalties and a ban on the sale of part or all of our products in that jurisdiction.

There has been a broad range of proposed and promulgated state, national and international regulation aimed at reducing the effects of climate change. Such regulations apply or could apply in countries where we have interests or could have interests in the future. In the United States, there is a significant possibility that some form of regulation will be enacted at the federal level to address the effects of climate change. Such regulation could take several forms

that could result in additional costs in the form of taxes, the restriction of output, investments of capital to maintain compliance with laws and regulations, or required acquisition or trading of emission allowances. Climate change regulation continues to evolve, and while it is not possible to accurately estimate either a timetable for implementation or our future compliance costs relating to implementation, we do not believe that such regulation is reasonably likely to have a material effect in the foreseeable future on our business, results of operations, capital expenditures or financial position.

We are exposed to political, economic and other risks from operating a multinational business.

Our business is multinational and subject to the political, economic and other risks that are inherent in operating in numerous countries. These risks include those of adverse government regulation, including the imposition of import and export duties and quotas, currency restrictions, expropriation and potentially burdensome taxation. For example, banana import regulations have in prior years restricted our access to the EU banana market and increased the cost of doing business in the EU. On December

Table of Contents

15, 2009, the EU entered into an agreement with certain Latin America banana exporting countries to settle the long running dispute over banana import tariffs. This agreement was ratified during the first half of 2010. Under this agreement, the EU gradually reduces import tariffs on bananas from Latin America on an annual basis from the current level of €143 per ton in 2011 to €114 per ton in 2017. In addition, the EU has entered into Free Trade Agreements with Colombia, Peru and five Central American countries. Under these bilateral trade agreements, duties on bananas will fall progressively to €75 per ton by 2020. The EU continues to negotiate Free Trade Agreements with Latin American banana-producing countries, and there is a possibility that some form of new EU banana tariff-rate quotas will be reinstated. We cannot predict the impact of further changes to the banana import tariffs or new quotas, on the EU banana market.

Costa Rica and Ecuador, countries in which we operate, have established “minimum” export prices for bananas that are used as the reference point in banana purchase contracts from independent producers, thus limiting our ability to negotiate lower purchase prices. These minimum export price requirements could potentially increase the cost of sourcing bananas in countries that have established such requirements.

We are also subject to a variety of government regulations in countries where we market our products, including the United States, the countries of the EU, Asia, countries of the Middle East and Africa. Examples of the types of regulation we face include:

•sanitary regulations;

•regulations governing pesticide use and residue levels; and

•regulations governing packaging and labeling.

If we fail to comply with applicable regulations, it could result in an order barring the sale of part or all of a particular shipment of our products or, possibly, the sale of any of our products for a specified period. Such a development could result in significant losses and could weaken our financial condition.

The distribution of our fresh produce in Southern Europe could be adversely affected if we are not successful in performing our own fresh produce products distribution, sales and marketing function.

In the past, we imported and distributed a substantial portion of our fresh produce in Southern Europe through a marketing entity with which we had an exclusive arrangement. As a result of continuing disagreements with this distributor related to operational issues, we delivered our formal notice that we will cease all business with the distributor by December 31, 2011. Commencing in 2012, we began performing our own fresh produce distribution in these markets by establishing our own sales and marketing organization and as a result, we have expanded our sales and marketing organization in France and Spain. In Italy and the remaining Southern European countries, we also use various independent distributors. The termination of our exclusive arrangement and our inability to successfully perform our own distribution, sales and marketing activities could affect the sale of our fresh produce products in Southern Europe and the Mediterranean region and may have a negative effect on our results of operations.

Acts or omissions of other companies could adversely affect the value of the DEL MONTE® brand.

We depend on the DEL MONTE® brand in marketing our products. We share the DEL MONTE® brand with unaffiliated companies that manufacture, distribute and sell canned or processed fruit and vegetables, dried fruit, snacks and other products. Acts or omissions by these companies, including an instance of food-borne contamination or disease, may adversely affect the value of the DEL MONTE® brand. As a result, our reputation and the value of the DEL MONTE® brand may be adversely affected by negative consumer perception.

Our success depends on the services of our senior executives, the loss of whom could disrupt our operations.

Our ability to maintain our competitive position is dependent to a large degree on the services of our senior management team. We may not be able to retain our existing senior management personnel or attract additional qualified senior management personnel.

Table of Contents

Our acquisition and expansion strategy may not be successful.

Our growth strategy is based in part on growth through acquisitions or expansion, which poses a number of risks. We may not be successful in identifying appropriate acquisition candidates, consummating acquisitions on satisfactory terms or integrating any newly acquired or expanded business with our current operations. We may issue additional Ordinary Shares, incur long-term or short-term indebtedness, spend cash or use a combination of these for all or part of the consideration paid in future acquisitions or expansion of our operations. The execution of our acquisition and expansion strategy could entail repositioning or similar actions that in turn require us to record impairments, restructuring and other charges. Any such charges would reduce our earnings.

Our indebtedness could limit our financial and operating flexibility and subject us to other risks.

Our ability to obtain additional debt financing or refinance our debt on acceptable terms, if at all, in the future for working capital, capital expenditures or acquisitions may be limited either by financial considerations or due to covenants in existing debt agreements.

Our ability to meet our financial obligations will depend on our future performance, which will be affected by prevailing economic conditions and financial, business and other factors, some of which are beyond our control. Our ability to meet our financial obligations also may be adversely affected by the seasonal nature of our business, the cyclical nature of agricultural commodity prices, the susceptibility of our product sourcing to crop disease, severe weather and other adverse environmental conditions and other factors.

Since we are an exempt holding company, our ability to meet our financial obligations depends primarily on receiving sufficient funds from our subsidiaries. The payment of dividends or other distributions to us by our subsidiaries may be restricted by the provisions of our credit agreements and other contractual requirements and by applicable legal restrictions on payment of dividends.

If we were unable to meet our financial obligations, we would be forced to pursue one or more alternative strategies, such as selling assets, restructuring or refinancing our indebtedness or seeking additional equity capital, strategies which could be unsuccessful. Additional sales of our equity capital could substantially dilute the ownership interest of existing shareholders.

Our current credit facility imposes certain operating and financial restrictions on us. Our failure to comply with the obligations under this facility, including maintenance of financial ratios, could result in an event of default, which, if not cured or waived, would permit the lender to accelerate the indebtedness due under the facility.

We are controlled by our principal shareholders.

Members of the Abu-Ghazaleh family, including our Chairman and Chief Executive Officer and one of our directors, are our principal shareholders. Together, as of February 17, 2012, they beneficially own 34.0% of our outstanding Ordinary Shares, and our Chairman and Chief Executive Officer holds, and is expected to continue to hold, an irrevocable annual proxy to vote all of these shares. We expect our principal shareholders to continue to use their interest in our Ordinary Shares to significantly influence the direction of our management, the election of our entire board of directors, the method and timing of the payment of dividends, subject to applicable debt covenants and to determine substantially all other matters requiring shareholder approval and to control us. The concentration of our beneficial ownership may have the effect of delaying, deterring or preventing a change in control, may discourage bids for the Ordinary Shares at a premium over their market price and may otherwise adversely affect the market price of the Ordinary Shares.

A substantial number of our Ordinary Shares are available for sale in the public market, and sales of those shares could adversely affect our share price.

Future sales of our Ordinary Shares by our principal shareholders, or the perception that such sales could occur, could adversely affect the prevailing market price of our Ordinary Shares. Of the 57,796,277 Ordinary Shares outstanding as of February 17, 2012, 19,630,627 Ordinary Shares are owned by the principal shareholders and are “restricted securities.” These “restricted securities” can be registered upon demand and are eligible for sale in the public market without registration under the Securities Act of 1933 (the “Securities Act”), subject to compliance with the resale volume limitations and other restrictions of Rule 144 under the Securities Act.

Table of Contents

Our organizational documents contain a variety of anti-takeover provisions that could delay, deter or prevent a change in control.

Various provisions of our organizational documents and Cayman Islands law may delay, deter or prevent a change in control of us that is not approved by our board of directors. These provisions include:

- a classified board of directors;
- a prohibition on shareholder action through written consents;
- a requirement that general meetings of shareholders be called only by a majority of the board of directors or by the Chairman of the Board;
- advance notice requirements for shareholder proposals and nominations;
- limitations on the ability of shareholders to amend, alter or repeal our organizational documents; and
- the authority of the board of directors to issue preferred shares with such terms as the board of directors may determine.

In addition, a change of control would constitute an event of default under our current credit facility, which would have a material adverse effect on us. These provisions also could delay, deter or prevent a takeover attempt.

Our shareholders have limited rights under Cayman Islands law.

We are incorporated under the laws of the Cayman Islands, and our corporate affairs are governed by our Memorandum and Articles of Association and by the Companies Law (As Revised) of the Cayman Islands. Principles of law relating to matters, such as the validity of corporate procedures, the fiduciary duties of our management, directors and controlling shareholders and the rights of our shareholders differ from those that would apply if we were incorporated in a jurisdiction within the United States. Further, the rights of shareholders under Cayman Islands law are not as clearly established as the rights of shareholders under legislation or judicial precedent applicable in most U.S. jurisdictions. As a result, our public shareholders may have more difficulty in protecting their interests in the face of actions by the management, directors or controlling shareholders than they might have as shareholders of a corporation incorporated in a U.S. jurisdiction. In addition, there is doubt as to whether the courts of the Cayman Islands would enforce, either in an original action or in an action for enforcement of judgments of U.S. courts, liabilities that are predicated upon the U.S. federal securities laws.

Item 1B. Unresolved Staff Comments

None.

Item 2. Properties

The following table summarizes the approximate plantation acreage under production that are owned or leased by us and the principal products grown on such plantations by location as of the end of 2011:

Location	Acres Under Production		Products
	Acres Owned	Acres Leased	
Costa Rica	42,700	6,600	Bananas, Pineapples, Melons
Guatemala	8,100	5,300	Bananas, Melons

Edgar Filing: FRESH DEL MONTE PRODUCE INC - Form 10-K

Brazil	3,100	—	Bananas
Chile	4,300	800	Non-Tropical Fruit
Kenya	—	12,200	Pineapples
Philippines	200	6,400	Bananas, Pineapples
United States	—	4,700	Melons

20

Table of Contents

Our significant properties include the following:

North America

We operate a total of 22 distribution centers in the United States of which nine are also fresh-cut facilities. We own seven of our distribution centers, including a 200,000 square foot distribution center in Dallas, Texas, a distribution center in Plant City, Florida and a repack facility in Winder, Georgia. The remaining 15 distribution centers are leased from third parties. All of our distribution centers have ripening capabilities and/or other value-added services. We also own stand-alone fresh-cut facilities in Kankakee, Illinois and Portland, Oregon. In addition, we lease four port facilities that include cold storage capabilities.

Europe

We operate three distribution centers in Germany, an owned facility and two leased. We also own and operate two fresh-cut facilities in the United Kingdom. In Poland, we operate two distribution centers that are leased from third parties and include ripening facilities and other value added services. We own and operate a production facility for prepared fruit, tomato products and snacks in Larissa, Greece.

Asia

Our products are distributed from four leased distribution centers located at strategic ports in Japan with cold storage and banana ripening operations. In addition, we own three distribution centers in South Korea and lease a distribution center in Hong Kong. Our South Korean distribution centers include state-of-the art ripening technology and other value-added services. We also own and operate one fresh-cut facility in Japan.

South America

In Brazil, we own approximately 30,000 acres of land of which 3,100 acres are under production. In Uruguay, we own approximately 7,800 acres of which 4,200 acres contain a citrus plantation that is leased to a third party on a five-year basis.

Africa

We own and operate a warehouse and cannery in Kenya.

Middle East

In Jordan, we own an integrated poultry business including poultry farms, feed mill and poultry slaughterhouse and meat processing plant. We also own a combined distribution/manufacturing center in Dubai, UAE. This state-of-the-art facility includes banana ripening and cold storage facilities, fresh-cut fruit and vegetable operations and an ultra fresh juice manufacturing operation. In addition, we operate a distribution center under an operating lease from a third party in Abu-Dhabi, UAE that includes banana ripening and cold storage facilities. In Saudi Arabia, we own 60% of a joint venture that operates two owned distribution centers with banana ripening, cold storage facilities and manufacturing capabilities.

Maritime and Other Equipment (including Containers)

We own a fleet of 12 and charter another 12 refrigerated vessels. In addition, we own or lease other related equipment, including approximately 4,500 refrigerated container units and 170 trucks and refrigerated trailers used to transport our fresh produce in the United States.

Other Properties

We own our U.S. executive headquarters building in Coral Gables, Florida, our Central America regional headquarters building in San Jose, Costa Rica and our South America regional headquarters building in Santiago, Chile. We own our office space in Guatemala City, Guatemala and Amman, Jordan. Our remaining office space in North America, Europe, Asia, Central and South America is leased from third parties.

We believe that our property, plant and equipment are well maintained, in good operating condition and adequate for our present needs. Except as noted in Item 3. Legal Proceedings and Note 17, "Litigation" to the Consolidated Financial Statements included in Item 8. Financial Statements and Supplementary Data, we know of no other environmental issues that may affect the

Table of Contents

utilization of our property, plant and equipment. For further information with respect to our property, plant and equipment, see Note 6, “Property, Plant and Equipment ” to the Consolidated Financial Statements filed as part of this Report.

The principal capital expenditures planned for 2012 consist primarily of the expansion and improvements of production facilities in Costa Rica, Guatemala, Chile, Kenya, Greece and the Philippines and for our distribution and fresh-cut facilities in North America and Saudi Arabia.

Item 3. Legal Proceedings

See Note 17, “Litigation” to the Consolidated Financial Statements included in Item 8. Financial Statements and Supplementary Data.

Item 4. Mine Safety Disclosures

Not applicable.

Table of Contents

PART II

Item 5. Market for Registrant's Common Equity, Related Stockholder Matters and Issuer Purchases of Equity Securities

Ordinary Share Prices and Related Matters

Our Ordinary Shares are traded solely on the New York Stock Exchange ("NYSE"), under the symbol FDP, and commenced trading on October 24, 1997, the date of our initial public offering.

The following table presents the high and low sales prices of our Ordinary Shares for the periods indicated as reported on the NYSE Composite Tape:

	High	Low
2011		
First quarter	\$28.58	\$24.63
Second quarter	\$27.49	\$25.54
Third quarter	\$27.68	\$21.41

Dividend Policy

On November 3, 2010, our Board of Directors reinstated a quarterly cash dividend, declaring a third quarter 2010 cash dividend of \$0.05 per ordinary share to shareholders of record on November 17, 2010. On August 3, 2011, our Board of Directors increased the interim cash dividend from \$0.05 to \$0.10 per ordinary share. We paid an aggregate of \$17.7 million and \$2.9 million in dividends during the years ended December 30, 2011 and December 31, 2010, respectively. We did not pay dividends in 2009. Because we are an exempted holding company, our ability to pay dividends and to meet our debt service obligations depends primarily on receiving sufficient funds from our subsidiaries. Pursuant to our credit facility, we may declare and pay dividends and distributions in cash solely out of and up to 50% of our net income for the year immediately preceding the year in which the dividend or distribution is paid; provided that we may declare dividends in cash solely out of and up to 70% of our net income for the fiscal year immediately preceding the year in which the dividend or distribution is paid if, after giving effect to such dividend payment, we have a leverage ratio of 2.50 to 1.00 for such year. It is also possible that countries in which one or more of our subsidiaries are located could institute exchange controls, which could prevent those subsidiaries from remitting dividends or other payments to us. Dividends are payable when, as and if declared by our board of directors, and we cannot assure you that dividends will be paid in the future.

Shareholders

As of February 17, 2012, we had 97 shareholders of record, which excludes shareholders whose shares were held by brokerage firms, depositories and other institutional firms in "street name".

Performance Graph

The following graph compares the cumulative five-year total return of holders of FDP common stock with the cumulative total returns of the S&P 500 index and the S&P 500 Food Products index. The graph tracks the performance of a \$100 investment in our common stock and in each of the indexes (with the reinvestment of all dividends) from December 29, 2006 to December 30, 2011.

	12/29/2006	12/28/2007	12/26/2008	1/1/2010	12/31/2010	12/30/2011
Fresh Del Monte Produce Inc.	100.00	227.10	158.75	148.22	167.72	170.15
S&P 500	100.00	105.49	66.46	84.05	96.71	98.75
S&P 500 Food Products	100.00	104.48	85.20	100.35	113.39	129.81

The stock price performance included in this graph is not necessarily indicative of future stock price performance.

Table of Contents

Share Repurchase Program

The following table provides information regarding our purchases of Ordinary Shares during the periods indicated:

Period	Total Number of Shares Purchased ⁽¹⁾	Average Price Paid per Share	Total Number of Shares Purchased as Part of Publicly Announced Plans or Programs	Maximum Dollar Value of Shares that May Yet Be Purchased Under the Program ⁽²⁾⁽³⁾
October 1, 2011 through October 31, 2011	281,082	\$22.96	281,082	\$142,934,465
November 1, 2011 through November 30, 2011	37,900	\$23.85	37,900	\$142,030,550
December 1, 2011 through December 30, 2011	—	\$—	—	\$142,030,550
Total	318,982	\$23.07	318,982	\$142,030,550

(1) As of December 30, 2011, we retired all 318,982 of the repurchased ordinary shares.

(2) On August 3, 2009, we announced that our Board of Directors, at their July 31, 2009 board meeting, approved a three-year stock repurchase program of up to \$150.0 million of our ordinary shares.

(3) On May 5, 2010, we announced that our Board of Directors, at their May 5, 2010 board meeting, approved a three-year stock repurchase program of up to \$150.0 million of our ordinary shares in addition to the program announced on August 3, 2009.

Item 6. Selected Financial Data

Our fiscal year end is the last Friday of the calendar year or the first Friday subsequent to the end of the calendar year, whichever is closest to the end of the calendar year.

The following selected financial data for the years ended December 28, 2007, December 26, 2008, January 1, 2010, December 31, 2010 and December 30, 2011 is derived from our audited Consolidated Financial Statements for the applicable year, prepared in accordance with U.S. generally accepted accounting principles.

The following selected financial data should be read in conjunction with Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations and our Consolidated Financial Statements and accompanying notes contained in Item 8. Financial Statements and Supplementary Data in this Report.

We reclassified gain on sales of property, plant and equipment in other expense (income), net on the Consolidated (1) Statements of Income for 2008. Accordingly, we have reclassified these amounts for years prior to 2008 to gain on sales of property, plant and equipment, a component of operating income.

The ASC on "Consolidation" was amended to require classification of noncontrolling interests as a component of consolidated shareholders' equity and the elimination of "minority interest" accounting in results of (2) operations. Earnings attributable to noncontrolling interests are required to be reported as part of consolidated earnings and not as a separate component of income or expense and are required to be disclosed on the face of the statement of income. We adopted this additional guidance on December 27, 2008, the first day of our 2009 fiscal year. See Note 2, "Summary of Significant Accounting Policies" to our Consolidated Financial Statements.

Table of Contents

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations

Overview

We are one of the world's leading vertically integrated producers, marketers and distributors of high-quality fresh and fresh-cut fruit and vegetables, as well as a leading producer and marketer of prepared fruit and vegetables, juices, beverages and snacks in Europe, Africa and the Middle East. We market our products worldwide under the DEL MONTE® brand, a symbol of product innovation, quality, freshness and reliability since 1892. Our global sourcing and logistics system allows us to provide regular delivery of consistently high-quality produce and value-added services to our customers. Our major producing operations are located in North, Central and South America, Asia and Africa. Production operations are aggregated on the basis of our products: bananas, other fresh produce and prepared foods. Other fresh produce includes pineapples, melons, tomatoes, non-tropical fruit (including grapes, apples, pears, peaches, plums, nectarines, avocados, citrus and kiwis), fresh-cut produce and other fruit and vegetables and a plastic product and box manufacturing business, a grain business (which we exited in 2010) and third-party ocean freight services (which we significantly curtailed in 2009). Prepared foods include prepared fruit and vegetables, juices, beverages, snacks, poultry and meat products. As a result of our decision to exit grain operations in Argentina during 2010 and the elimination of third-party ocean freight services from Northern Europe to the Caribbean during 2009, we have combined the other products and services segment with the other fresh produce segment in 2011 due to the relative size of the remaining operations. Prior year amounts have been reclassified to conform to the 2011 presentation.

Strategy

Our strategy is focused on a combination of maximizing revenues from our existing infrastructure, entering new markets and strict cost control initiatives. We plan to continue to capitalize on the growing global demand for fresh produce and expand our reach into existing and new markets. We expect sales growth of fresh produce in key markets by increasing sales volume and per unit sales prices as permitted by market conditions. Our strategy includes increasing volumes from existing production and distribution facilities in order to improve operating efficiencies and reduce per unit costs. We plan additional investments in production facilities in order to expand our product offering in established markets and continue with our recent expansion in growth markets, such as the Middle East, Africa and countries formerly part of the Soviet Union.

Net Sales

Our net sales are affected by numerous factors, including mainly the balance between the supply of and demand for our produce and competition from other fresh produce companies. Our net sales are also dependent on our ability to supply a consistent volume and quality of fresh produce to the markets we serve. For example, seasonal variations in demand for bananas as a result of increased supply and competition from other fruit are reflected in the seasonal fluctuations in banana prices, with the first six months of each year generally exhibiting stronger demand and higher prices, except in those years where an excess supply exists. During the first part of 2011 banana supplies were not as plentiful as in the prior year. In 2011, our overall banana sales volume decreased by 2% while our average per unit sales prices increased by 4%. Our net sales of other fresh produce were positively impacted by increased sales volumes of fresh-cut fruit, non-tropical fruit and pineapples. In the processed foods business, we generally realize the largest portion of our net sales and gross profit in the third and fourth quarters of the year. During 2011, our prepared food net sales decreased slightly principally as a result of lower sales of canned deciduous products that resulted from reduced sourcing from South Africa.

Since our financial reporting currency is the U.S. dollar, our net sales are significantly affected by fluctuations in the value of the currency in which we conduct our sales versus the dollar, with a weak dollar versus such currencies resulting in increased net sales in dollar terms. Including the effect of our foreign currency hedges, net sales for 2011 were positively impacted by \$17.1 million, as compared to 2010, principally as a result of a stronger Korean won, British pound and Japanese yen, partially offset by a weaker euro and Kenya shilling, versus the U.S. dollar.

Our net sales growth in recent years has been achieved primarily through increased sales volume in existing markets of other fresh produce, primarily pineapples and non-tropical fruit, and favorable pricing on our Del Monte Gold® Extra Sweet pineapple combined with increased sales volume and per unit sales prices of bananas in existing and new markets. During 2011, our net sales were positively affected by higher sales volume of bananas and gold pineapples that resulted from our production expansion, which were offset principally by lower net sales of melons and other products and services. Our net sales growth in recent years is also attributable to a broadening of our product line with the expansion of our fresh-cut produce business, specifically increased sales to the foodservice sector, combined with our expansion into new markets. We expect our net sales growth to continue to be driven by increased sales volumes in our banana, other fresh produce and the prepared food segments. In the Middle

Table of Contents

East, we expect to continue to increase our net sales of our fresh produce and prepared food product offerings as a result of our expansion in the Saudi Arabian and other regional markets. We also expect to increase our sales by developing new products in the prepared food segment, targeting the convenience store and foodservice trade in selected European and Middle East markets. We also expect to continue to expand our sales of beverage products in the European and Sub-Sahara African markets.

Cost of Products Sold

Cost of products sold is principally composed of two elements, product and logistics costs. Product cost for our produce is primarily composed of cultivation (the cost of growing crops), harvesting, packaging, labor, depreciation and farm administration. Product cost for produce obtained from independent growers is composed of produce and packaging costs. Logistics costs include land and sea transportation and expenses related to port facilities and distribution centers. Sea transportation cost is the most significant component of logistics costs and is comprised of the cost of vessel operating expenses and chartering refrigerated vessels. Vessel operating expenses for our owned vessels include operations, maintenance, depreciation, insurance, fuel (the cost of which is subject to commodity price fluctuations), and port charges. For chartered vessels, operating expenses include the cost of chartering the vessels, fuel and port charges. Variations in containerboard prices, which affect the cost of boxes and other packaging materials, and fuel prices can have a significant impact on our product cost and our profit margins. Also, variations in the production yields, fertilizers and other input costs and the cost to procure products from independent growers can have a significant impact on our costs. Containerboard, plastic, resin and fuel prices have historically been volatile. During 2010, cost of fuel increased by 25% and containerboard increased by 7%, increasing our cost of product sold by \$30.7 million. In addition, we incurred \$8.7 million of increased costs for inventory write-downs and other costs associated with exit activities in Brazil, floods in Guatemala and damages caused by an earthquake in Chile, partially offset by insurance reimbursements. During 2011, cost of fuel increased by 37% and containerboard decreased 8%, increasing our cost of products sold by \$49.7 million. In addition, we recorded a credit of \$(3.3) million in 2011 related to insurance claims proceeds as a result of damages that occurred in 2010 from flooding in Guatemala and an earthquake in Chile and \$1.9 million in inventory write-downs in Central America as a result of our melon program rationalization and write-down of packaging material and other inventory in one of our United Kingdom fresh-cut operations.

In general, changes in our volume of products sold can have a disproportionate effect on our gross profit. Within any particular year, a significant portion of our cost of products sold is fixed, both with respect to our operations and with respect to the cost of produce purchased from independent growers from whom we have agreed to purchase all the products they produce. Accordingly, higher volumes produced on company-owned farms directly reduce the average per-box cost, while lower volumes directly increase the average per-box cost. In addition, because the volume that will actually be produced on our farms and by independent growers in any given year depends on a variety of factors, including weather, that are beyond our control or the control of our independent growers, it is difficult to predict volumes and per-box costs.

Since our financial reporting currency is the U.S. dollar, our costs are affected by fluctuations in the value of the currency in which we have significant operations versus the dollar, with a weak dollar versus those currencies resulting in increased costs. During 2011, cost of products sold was negatively impacted by approximately \$45.7 million as a result of a weaker U.S. dollar versus the various currencies in which we have significant operations.

Selling, General and Administrative Expenses

Selling, general and administrative expenses primarily include the costs associated with selling in countries where we have our own sales force, advertising and promotional expenses, professional fees, general corporate overhead and other related administrative functions.

Gain on Sales of Property, Plant and Equipment

Gain on sales of property, plant and equipment was \$3.1 million in 2011 principally as a result of the sale of shipping-related equipment and other surplus equipment. In 2010, the gain on sales of property, plant and equipment of \$9.2 million resulted primarily from the sale of four refrigerated vessels and properties in South America.

Asset Impairment and Other Charges, Net

Asset impairment and other charges, net were \$16.3 million in 2011 as compared with \$37.3 million in 2010, a decrease of \$21.0 million. In 2011, we recorded asset impairment and other charges totaling \$16.3 million primarily related to asset impairments and other charges as a result of our Central American melon rationalization program, an under-utilized fresh-cut facility and distribution center in the United Kingdom, our decision to abandon an isolated area in our banana operations in the Philippines and a low-productivity area in Costa Rica and legal costs in Hawaii related to the Kunia well site, partially offset by

Table of Contents

insurance claims proceeds related to damages that occurred in 2010 from flooding in Guatemala and an earthquake in Chile.

In 2010, we recorded asset impairment and other charges totaling \$37.3 million related to plant disease affecting an isolated growing area in our banana operations in the Philippines that was abandoned during the first quarter of 2011, exit activities in South Africa and Brazil, damage caused by floods in our Guatemala banana farms and an earthquake in Chile, combined with an impairment charge of the DEL MONTE® perpetual, royalty-free brand name license for beverage products in the United Kingdom due to lower than expected sales volume and pricing and the relocation of a port facility in North America.

In 2009, we recorded asset impairment and other charges totaling \$10.9 million as a result of our decision to discontinue pineapple planting in Brazil and our decision not to use certain property, plant and equipment as originally intended for other crop production. During 2009, we also incurred charges of \$1.2 million for termination benefits and contract termination costs resulting from our decision to discontinue our commercial cargo service in Germany, a \$2.0 million impairment charge of the DEL MONTE® perpetual, royalty-free brand name license for beverage products in the United Kingdom due to lower than expected sales volume and pricing and a \$2.8 million asset impairment charge related to an intangible asset for a non-compete agreement as a result of the Caribana acquisition. These charges were partially offset by \$5.5 million of credits due to the reversal of contract termination costs as a result of the closure of an under-utilized distribution center in the United Kingdom, and the discontinuance of retiree medical benefits and the reversal of contract termination costs related to the closing of our Hawaii pineapple operations. Also included in asset impairments and other charges, net, for 2009 was \$3.4 million of insurance recoveries related to the 2008 floods of our Brazil banana operations.

Interest Expense

Interest expense consists primarily of interest on borrowings under working capital facilities that we maintain and interest on other long-term debt primarily for capital lease obligations. In 2011, our interest expense declined, reflecting primarily lower interest rates and a decrease in our average outstanding debt, partially offset by a write-down of debt issuance costs as a result of our voluntary reduction of available borrowing capacity under our credit facility.

Other Income (Expense), Net

Other income (expense), net, primarily consists of currency exchange gains or losses, equity gains and losses in unconsolidated companies and other miscellaneous income and expense items. During 2011, we recorded higher currency exchange losses as compared with the prior year.

Provision for (Benefit from) Income Taxes

The provision for (benefit from) income taxes in 2011 was \$5.7 million and includes the establishment of reserves for uncertain tax positions in various foreign jurisdictions combined with increased taxable income, partially offset by a favorable adjustment as a result of a change in the tax treatment of plantation costs in a foreign jurisdiction. Income taxes consist of the consolidation of the tax provisions, computed on a separate entity basis, in each country in which we have operations. Since we are a non-U.S. company with substantial operations outside the United States, a substantial portion of our results of operations is not subject to U.S. taxation. Several of the countries in which we operate have favorable tax rates. We are subject to U.S. taxation on our operations in the United States. From time to time, tax authorities in various jurisdictions in which we operate audit our tax returns and review our tax positions. There are audits presently pending in various countries. There can be no assurance that any tax audits, or changes in existing tax laws or interpretations in countries in which we operate, will not result in an increased

effective tax rate for us.

Table of Contents

2011 Compared with 2010

Net Sales

Net sales in 2011 were \$3,589.7 million compared with \$3,552.9 million in 2010. The increase in net sales of \$36.8 million was primarily attributable to higher net sales of bananas and other fresh produce, partially offset by lower net sales of prepared foods.

Net sales in the banana segment increased by \$32.8 million principally due to higher per unit sales prices and sales volume in North America and higher per unit sales prices in Asia, partially offset by lower sales volume in Europe and the Middle East.

North America banana net sales increased primarily due to 7% higher per unit sales prices due to industry shortages.

Europe banana net sales decreased principally due to lower sales volume, partially offset by slightly higher per unit sales prices.

Middle East banana net sales decreased principally due to lower sales volume.

Asia banana net sales decreased slightly due to lower sales volume partially offset by higher per unit sales prices and favorable exchange rates.

Net sales in the other fresh produce segment increased by \$8.8 million principally as a result of higher sales of non-tropical fruit, fresh-cut fruit products and pineapple, partially offset by lower net sales of melons, Argentine grain, strawberries and tomatoes.

Net sales of non-tropical fruit increased principally due to significantly higher per unit sales prices of avocados in North America as a result of reduced industry wide supply, combined with higher sales volume of grapes in Asia and North America and higher demand of cherries in Asia.

Net sales of fresh-cut products increased primarily due to higher per unit sales prices and sales volume in North America, Europe and the Middle East that resulted from improved market conditions and an expanded customer base.

Net sales of pineapples increased principally due to an increase in sales volume in Asia and the Middle East principally due to production expansion in Asia.

Net sales of melons decreased principally as a result of significant planned volume reductions. Per unit sales price were relatively flat as compared with prior year.

Net sales of Argentine grain decreased as a result of our decision in 2010 to exit grain operations in Argentina.

Net sales of strawberries decreased due to lower customer demand in North America.

Net sales of tomatoes decreased principally due to lower customer demand and program rationalization.

Net sales in the prepared food segment decreased by \$4.8 million principally due to lower net sales of canned deciduous and pineapple products as a result of reduced deciduous sourcing from South Africa and lower yields in our Kenya pineapple operations that resulted from drought conditions earlier in the year and unfavorable exchange rates in Europe. Partially offsetting these decreases in net sales in the prepared food segment were higher net sales in our

Jordanian poultry and prepared meats business.

Table of Contents

Cost of Products Sold

Cost of products sold was \$3,270.2 million in 2011 compared with \$3,280.5 million in 2010, a decrease of \$10.3 million. This decrease in cost of products sold was primarily attributable to an overall 3% reduction in sales volumes, partially offset by unfavorable exchange rates in producing countries and higher fuel and input costs. The higher fuel cost resulted in an increase of \$38.6 million in our cost of product sold. Also contributing to the decrease in cost of products sold was a net credit of \$(1.4) million recorded in 2011 related to insurance claims proceeds as a result of damages that occurred in 2010 from flooding in Guatemala and an earthquake in Chile, partially offset by the write-down of inventory in Central America due to our melon program rationalization and write-down of packaging material and other inventory in one of our United Kingdom fresh-cut operations. In 2010, we recorded \$8.7 million in other net charges, principally related to the write-down of inventory caused by floods in our Guatemala banana farms, net of related insurance reimbursements, an earthquake in Chile and exit activities in Brazil related to the discontinuation of melon growing operations.

Gross Profit

Gross profit was \$319.5 million in 2011 compared with \$272.4 million in 2010, an increase of \$47.1 million. The increase in gross profit was attributable to higher gross profit on bananas and prepared food, partially offset by lower gross profit in other fresh produce.

Gross profit in the banana segment increased by \$56.9 million as a result of higher per unit selling prices in all regions partially offset by higher fuel cost and a 2% reduction in sales volume. Worldwide per unit selling prices increased 4% and cost per box increased less than 1%.

Gross profit in the prepared food segment increased by \$7.7 million principally as a result of lower costs of canned deciduous products that resulted from operational improvements made during 2010, combined with increases in per unit sales price of pineapple products that resulted from improved market conditions. These increase in gross profit were partially offset by higher costs in the Jordanian poultry business that resulted from lower yields and higher cost of corn feed combined with higher fruit cost in our Kenya canned pineapple operations, principally due to the continued effect of the drought.

Gross profit on the other fresh produce segment decreased by \$17.5 million principally as a result of lower gross profit on gold pineapples, non-tropical fruit and tomatoes.

Gross profit on gold pineapples decreased in 2011 principally as a result of lower per unit sales prices in all markets except North America due to unfavorable market conditions and unfavorable exchange rates combined with higher fuel cost. Worldwide per unit sales prices decreased 1% and per unit costs increased 2%.

Gross profit in non-tropical fruit decreased principally due to lower selling prices of grapes in North America and Asia and higher costs of grapes in North America as a result of increased fruit procurement and fuel costs. Also contributing to the decrease in gross profit were higher procurement cost of avocados and lower per unit selling prices of stonefruit in North America and Europe. Partially offsetting these decreases in gross profit on non-tropical fruit was higher sales volumes of stonefruit in Asia due to increased demand and higher per unit selling prices for grapes in the Middle East due to reduced supplies in the region.

Gross profit on tomatoes decreased principally due to higher procurement and production costs combined with lower sales volumes resulting from unfavorable growing conditions in Central America, lower customer demand and program rationalization.

Selling, General and Administrative Expenses

Selling, general and administrative expenses increased \$23.6 million to \$190.4 million in 2011 compared with \$166.8 million in 2010. The increase was primarily due to higher compensation combined with higher selling and marketing expenses in Europe due to our direct marketing efforts in Southern Europe combined with higher promotional expenses in North America.

Gain on Sales of Property, Plant and Equipment

Gain on sales of property, plant and equipment was \$3.1 million in 2011 principally as a result of the sale of shipping-related and other surplus equipment.

Table of Contents

Asset Impairment and Other Charges

Asset impairment and other charges, net were \$16.3 million in 2011 as compared with \$37.3 million in 2010, a decrease of \$21.0 million.

Asset impairment and other charges (credits) for 2011 were as follows:

\$5.1 million in asset impairments and contract termination charges and \$3.3 million goodwill impairment charge as a result of our Central America melon program rationalization related to the other fresh produce segment;

\$4.3 million in asset impairment related to an under-performing United Kingdom fresh-cut facility in the other fresh produce segment;

\$4.7 million in asset impairment and contract termination charges related to under-utilized leased distribution centers and office space in the United Kingdom primarily related to the banana segment;

\$(4.2) million related to an insurance reimbursement as a result of floods in 2010 in Guatemala in the banana segment;

\$(1.5) million related to insurance reimbursement as a result of the Chile earthquake in 2010 in the other fresh produce segment;

\$1.2 million in contract termination and severance charges related to our decision to abandon an isolated area in our banana operation in the Philippines;

\$1.1 million in other charges and legal cost related to the Hawaii Kunia well site in the other fresh produce segment;

\$0.8 million related to the write-down of an abandoned banana producing area in Costa Rica due to low productivity;

\$0.7 million in asset impairment related to an underutilized production equipment in Jordan in the prepared food segment;

\$0.6 million in asset impairment related to an unconsolidated subsidiary in Ecuador in the banana segment; and

\$0.2 million in other asset impairment.

Asset impairment and other charges (credits) for 2010 were as follows:

During the second quarter of 2010, we entered into an agreement to sell substantially all of the assets of our South Africa canning operations. As a result, we recognized a \$16.7 million asset impairment of our investment in South Africa and \$0.1 million in other charges in the prepared food reporting segment;

\$12.7 million in asset impairments related to plant disease affecting an isolated growing area in our banana operations in the Philippines that was abandoned during the first quarter of 2011;

\$6.1 million in asset impairments and a \$(2.4) million insurance reimbursement related to flood damage to our Guatemala banana plantation;

•

\$1.4 million charge for impairment of the DEL MONTE® perpetual, royalty-free brand name license for beverage products in the United Kingdom due to lower than expected sales volume and pricing related to the prepared food segment;

\$1.1 million in asset impairment charges related to damage caused by an earthquake in Chile in the other fresh produce segment;

\$1.3 million in other charges due to the discontinuation of melon growing operations in Brazil related to the other fresh produce segment.

Table of Contents

\$0.7 million in asset impairment charges as a result of the relocation of a port facility in North America related to the banana and other fresh produce segments; and

\$(0.4) million in insurance proceeds related to the 2008 flood damage to our Brazil banana plantation.

Operating Income

Operating income in 2011 was \$115.9 million compared with an operating income of \$77.5 million in 2010, an increase of \$38.4 million. The increase in operating income is attributable to higher gross profit and lower asset impairments and other charges, net. Partially offsetting these increases in operating income were higher selling, general and administrative expense and lower gain on sales of property, plant and equipment.

Interest Expense

Interest expense was \$6.8 million in 2011 as compared with \$10.8 million in 2010, a decrease of \$4.0 million. The lower interest expense in 2011 is due to lower average debt balances and lower interest rates, partially offset by a \$1.2 million write-down of debt issuance costs as a result our voluntary reduction of available borrowing capacity under our credit facility.

Other Expense, Net

Other expense, net was \$9.7 million in 2011 compared with \$7.5 million in 2010. The increase of \$2.2 million in other expense, net was principally due to higher foreign exchange losses incurred during 2011.

Provision for (Benefit from) Income Taxes

Provision for (benefit from) income taxes was a provision of \$5.7 million in 2011 compared with a benefit of \$(0.7) million in 2010. Provision for (benefit from) income taxes in 2011 includes the establishment of uncertain tax positions in various foreign jurisdictions combined with an increase in taxable income, partially offset by a favorable adjustment as a result of a change in the tax treatment of plantation costs in a foreign jurisdiction. The benefit in 2010 includes a benefit of \$(7.3) million as a result of a change in estimate, combined with reversals of uncertain tax positions and release of valuation allowances in certain jurisdictions.

2010 Compared with 2009

Net Sales

Net sales in 2010 were \$3,552.9 million compared with \$3,496.4 million in 2009. The increase in net sales of \$56.5 million was primarily attributable to higher net sales of bananas and prepared food, partially offset by lower net sales of other fresh produce.

Net sales in the banana segment increased by \$109.3 million due to higher sales volume in North America and the Middle East partially offset by lower per unit sales prices in Europe, the Middle East and Asia.

North America banana sales volume increased as a result of increased supplies. Per unit sales prices increased slightly as compared with prior year.

Middle East banana sales volume increased significantly as a result of shipments to new markets in this region. Per unit sales prices decreased as compared with prior year as a result of weak market conditions.

Europe banana sales volume was relatively flat and per unit sales price decreased as compared with prior year. Contributing to the decrease in per unit sales price were unfavorable exchange rates and weak market conditions.

Asia banana sales volume decreased as a result of unfavorable growing conditions in the Philippines. Per unit sales price decreased as a result of poor market conditions partially offset by favorable exchange rates.

Net sales in the prepared food segment increased by \$22.4 million principally as the result of increased sales in our Jordanian poultry and processed meat business, canned pineapples and deciduous fruit in Europe and beverage products in Sub-Saharan Africa.

Table of Contents

Net sales in the other products and services segment decreased by \$47.4 million principally due to lower commodity selling prices affecting our Argentine grain business combined with our decision to exit grain operations in Argentina and lower third-party freight revenue due to the elimination of freight services from Northern Europe to the Caribbean.

Net sales in the other fresh produce segment decreased by \$27.8 million principally as a result of lower net sales of melons, potatoes and tomatoes, partially offset by higher sales of pineapples, non-tropical fruit, vegetables and fresh-cut fruit.

Net sales of melons decreased principally as a result of planned sales volume reduction, partially offset by higher per unit sales price in North America.

Net sales of potatoes and tomatoes decreased as a result of continued product rationalization and market conditions.

Net sales of pineapples increased principally due to an increase in sales volume in North America due to increased production in Costa Rica, combined with higher per unit sales prices in Asia as a result of favorable exchange rates.

Net sales of non-tropical fruit increased principally as a result of higher apple sales volumes and per unit sales price in the Middle East, higher grapes per unit sales price in Asia and North America, partially offset by lower sales volume and per unit sales prices of avocados in North America.

Net sale of vegetables increased principally as a result of higher sales volume of onions and bell peppers in North America.

Net sales of fresh-cut products increased principally due to higher sales volumes in North America and the Middle East that resulted from expansion of our customer base along with increased business with our current retail and foodservice customers in addition to higher per unit sales prices in North America, partially offset by lower sales volume in Europe.

Cost of Products Sold

Cost of products sold was \$3,280.5 million in 2010 compared with \$3,185.6 million in 2009, an increase of \$94.9 million. This increase in cost of products sold was primarily attributable to higher sales volumes of bananas and pineapples combined with higher fuel, containerboard and fruit procurement and production costs. Partially offsetting these increases in cost of product sold were lower restructuring and other charges incurred during 2010. In 2010, cost of product sold included \$8.7 million of net charges principally related to the write-down of inventory caused by floods in our Guatemala banana farms, net of related insurance reimbursements, an earthquake in Chile and exit activities in Brazil related to the discontinuation of melon growing operations. In 2009, cost of product sold included \$15.2 million principally related to growing crop inventory write-down as a result of our decision to discontinue pineapple operations in Brazil and an insurance reimbursement for prior year's flood damage.

Gross Profit

Gross profit was \$272.4 million in 2010 compared with \$310.8 million in 2009, a decrease of \$38.4 million. The decrease in gross profit was attributable to lower gross profit on bananas, prepared food and other products and services, partially offset by higher gross profit on other fresh produce.

- Gross profit in the banana segment decreased by \$77.3 million as a result of higher fuel and containerboard and fruit production and procurement costs combined with lower per unit sales price in Europe, the Middle

East and Asia, partially offset by a 10% increase in sales volume. Contributing to the increase in per unit fruit cost in 2010 was the inclement weather in Central America. In Guatemala, we recorded a charge of \$2.0 million, net of insurance recoveries, for clean-up costs and packaging materials inventory write-downs related to extensive flood damage.

Gross profit in the prepared food segment decreased by \$6.6 million principally as a result of higher costs of canned pineapples and higher costs in the Jordanian poultry business, partially offset by higher per unit sales prices.

Gross profit in the other products and services segment decreased by \$1.9 million primarily due to lower third-party freight services.

Table of Contents

Gross profit on the other fresh produce segment increased by \$47.4 million principally as a result of higher gross profit on gold pineapples, non-tropical fruit and melons.

Gross profit on gold pineapples increased in 2010 principally as a result higher sales volumes in North America, the Middle East and Asia, combined with the charge of \$17.2 million that was recorded in 2009 related to growing crop inventory as a result of our decision to discontinue pineapple operations in Brazil, partially offset by higher freight costs.

Gross profit in non-tropical fruit increased principally due to higher per unit sales prices of grapes in North America that resulted from favorable market conditions.

Gross profit on melons increased principally due to improvements in per unit sales prices in North America, partially offset by lower sales volumes, lower per unit sales prices in Europe, higher production, procurement and ocean freight costs combined with a charge of \$4.9 million for the discontinuation of our Brazil melon growing operation and costs associated with planned volume reduction in Costa Rica and Guatemala.

Selling, General and Administrative Expenses

Selling, general and administrative expenses increased \$1.0 million to \$166.8 million in 2010 compared with \$165.8 million in 2009. The increase was primarily due to higher advertising and promotional expenses in Europe related to the prepared food business, and higher selling and marketing expenses in the Middle East and Asia, partially offset by lower administrative expenses.

Gain on Sales of Property, Plant and Equipment

Gain on sales of property, plant and equipment was \$9.2 million in 2010 principally as a result of the sale of four refrigerated vessels and properties in South America. In 2009, the gain on sales of property, plant and equipment of \$11.2 million resulted primarily from the sale of five refrigerated vessels and properties in South America and Africa.

Asset Impairment and Other Charges

Asset impairment and other charges, net were \$37.3 million in 2010 as compared with \$8.0 million in 2009, an increase of \$29.3 million.

Asset impairment and other charges (credits) for 2010 were as follows:

During the second quarter of 2010, we entered into an agreement to sell substantially all of the assets of our South Africa canning operations. As a result, we recognized a \$16.7 million asset impairment of our investment in South Africa and \$0.1 million in other charges in the prepared food reporting segment.

- \$12.7 million in asset impairments related to plant disease affecting an isolated growing area in our banana operations in the Philippines that were abandoned during the first quarter of 2011.

\$6.1 million in asset impairments and a \$(2.4) million insurance reimbursement related to flood damage to our Guatemala banana plantation.

\$1.4 million charge for impairment of the DEL MONTE® perpetual, royalty-free brand name license for beverage products in the United Kingdom due to lower than expected sales volume and pricing related to the prepared food segment.

\$1.1 million in asset impairment charges related to damage caused by an earthquake in Chile in the other fresh produce segment.

\$1.3 million in other charges due to the discontinuation of melon growing operations in Brazil related to the other fresh produce segment.

\$0.7 million in asset impairment charges as a result of the relocation of a port facility in North America related to the banana and other fresh produce segments.

Table of Contents

\$(0.4) million in insurance proceeds related to the 2008 flood damage to our Brazil banana plantation.

Asset impairment and other charges (credits) for 2009 were as follows:

\$10.9 million in asset impairment and other charges as a result of our decision to discontinue pineapple operations in Brazil.

\$1.2 million in termination benefits and contract termination costs resulting from our decision to eliminate our commercial cargo service from Northern Europe to the Caribbean related to the other products and services segment.

\$2.0 million charge for impairment of the DEL MONTE® perpetual, royalty-free brand name license for beverage products in the United Kingdom due to lower than expected sales volume and pricing related to the prepared food segment.

\$2.8 million impairment charge related to an intangible asset for a non-compete agreement as a result of the Caribana acquisition related to the banana segment.

\$(0.8) million in reversals of contract termination costs previously recorded related to the closure of an under-utilized distribution center in the United Kingdom related to the banana segment.

\$(4.7) million principally due to a gain from the discontinuance of the retiree medical plan and the reversal of certain contract termination costs related to the previously announced closing of our Hawaii pineapple operations related to the other fresh produce segment.

\$(3.4) million gain due to insurance proceeds related to the 2008 Brazil floods related to the banana segment.

Operating Income

Operating income in 2010 was \$77.5 million compared with an operating income of \$148.2 million in 2009, a decrease of \$70.7 million. The decrease in operating income is attributable to lower gross profit, higher asset impairment and other charges combined with higher selling, general and administrative expense and lower gain on sales of property, plant and equipment.

Interest Expense

Interest expense was \$10.8 million in 2010 as compared with \$11.9 million in 2009, a decrease of \$1.1 million. The lower interest expense in 2010 is principally due to lower average debt balances.

Other Income (Expense), Net

Other income (expense), net was an expense of \$(7.5) million in 2010 compared with an expense of \$(5.2) million in 2009. The increase in expense in 2010 was principally due to equity losses from unconsolidated subsidiaries during 2010 as compared with equity income in 2009. Partially offsetting the equity loss from unconsolidated subsidiaries were lower foreign exchange losses incurred in 2010 as compared with 2009.

Provision for (Benefit from) Income Taxes

Provision for (benefit from) income taxes was a benefit of \$(0.7) million in 2010 compared with a benefit of \$(12.8) million in 2009. The benefit in 2010 includes a benefit of \$(7.3) million as a result of a change in estimate, combined

with reversals of uncertain tax positions and release of valuation allowances in certain jurisdictions. Provision for (benefit from) for income taxes in 2009 related principally to \$13.6 million of net changes in the deferred tax valuation allowance due to expected utilization of deferred tax assets as a result of increased profitability of our North America operations combined with the settlement of certain tax positions in connection with an audit in 2009.

Liquidity and Capital Resources

Net cash provided by operating activities was \$195.7 million for 2011 compared with \$197.4 million for 2010, a decrease of \$1.7 million. The decrease in cash provided by operating activities was principally due to higher levels of prepared food finished goods inventory and raw materials, packaging supplies and prepaid expenses. Partially offsetting these decreases in cash provided by operating activities were higher net income and accounts payable and accrued expenses combined with lower levels of accounts

Table of Contents

receivable.

Net cash provided by operating activities was \$197.4 million for 2010 compared with \$257.5 million for 2009, a decrease of \$60.1 million. The decrease in cash provided by operating activities was principally due to lower net income, partially offset by lower levels of prepared food finished goods inventory.

Working capital was \$522.2 million at December 30, 2011 compared with \$513.8 million at December 31, 2010, an increase of \$8.4 million. This increase in working capital was primarily attributable to higher levels of finished goods inventory and prepaid expenses and other current assets, partially offset by lower levels of accounts receivable and higher levels of accounts payable and accrued expenses.

Net cash used in investing activities was \$74.7 million for 2011, \$50.6 million for 2010 and \$66.9 million for 2009. Net cash used for investing activities for 2011 consisted primarily of capital expenditures of \$79.4 million, partially offset by \$4.7 million of proceeds from sales of property, plant and equipment. Our capital investment for 2011 consists of approximately \$30.5, principally for improvements and expansion of production facilities in Costa Rica, Guatemala, North America and Chile related to the other fresh produce segment and \$26.2 for improvements and expansion of production facilities in Guatemala, Costa Rica and distribution facilities in North America and Saudi Arabia related to the banana segment. Our capital expenditures in 2011 also included \$22.7 million for improvements and expansion of production facilities in Jordan, Saudi Arabia, Kenya and Greece related to the prepared food segment.

Net cash used for investing activities for 2010 consisted primarily of capital expenditures of \$70.8 million, partially offset by \$16.0 million of proceeds from sales of property, plant and equipment and \$4.2 million of return of investment by an unconsolidated company. Our capital expenditures consisted of approximately \$30.9 million, principally for expansion of production facilities in Guatemala, Costa Rica and Brazil combined with improvements to our port facilities in North America and distribution facilities in Saudi Arabia related to the banana segment, \$33.1 million principally for expansion of production facilities in Costa Rica, Guatemala, Chile and the Philippines and fresh-cut facilities in the United States and United Kingdom related to the other fresh produce segment and \$6.7 million principally for expansion of production facilities in Kenya, Greece and Jordan related to the prepared food segment. Proceeds from sale of property, plant and equipment for 2010 consisted primarily of the sale of four refrigerated vessels and properties in South America and the sale of our South Africa canning operations. On October 12, 2010, the sale of our South Africa canning operations was executed by the receipt of approximately \$1.5 million in cash and \$6.9 million recorded as a financing receivable, which was collected on January 27, 2011.

Net cash used in investing activities for 2009 consisted primarily of capital expenditures of \$84.5 million, partially offset by proceeds from sales of property, plant and equipment of \$17.6 million. Our capital expenditures for 2009 were comprised of \$51.6 million primarily for distribution centers in Saudi Arabia and expansion of production facilities in Costa Rica, Guatemala, Brazil and the Philippines related to the banana segment, \$29.9 million principally for expansion and improvements of our pineapple operations in Costa Rica and the Philippines, improvements of non-tropical fruit operations in Chile and of fresh-cut fruit facilities in North America and the United Kingdom related to the other fresh produce segment and \$5.3 million for expansion of production facilities in Jordan and Kenya related to the prepared food segment. Proceeds from sale of property, plant and equipment for 2009 consisted primarily of the sale of five refrigerated vessels that were scrapped and properties in South America and Africa.

Net cash used in financing activities was \$125.7 million for 2011, \$136.7 million for 2010 and \$182.2 million for 2009. Net cash used in financing activities for 2011 of \$125.7 million consisted of net repayment of long-term debt of \$80.6 million, repurchase of our ordinary shares of \$50.0 million, dividends paid of \$17.7 million and a distribution to noncontrolling interest of \$3.1 million, partially offset by proceeds from stock options exercised of \$22.8 million and excess tax benefit from stock-based compensation.

Net cash used in financing activities for 2010 of \$136.7 million was primarily attributable to repurchases of our ordinary shares of \$108.1 million, net repayment of long-term debt of \$31.3 million and dividends paid of \$2.9 million, partially offset by contributions from noncontrolling interest of \$3.4 million and proceeds from stock options exercised of \$2.2 million.

Net cash used in financing activities of \$182.2 million for 2009 was primarily attributable to net repayments on long-term debt of \$198.0 million, partially offset by contributions from noncontrolling interest of \$14.8 million and proceeds from stock options exercised of \$1.0 million.

We finance our working capital and other liquidity requirements primarily through cash from operations and borrowings under our senior secured revolving credit facility (the "Credit Facility") administered by Rabobank Nederland, New York Branch. Effective August 8, 2011, we voluntarily lowered the borrowing capacity on the Credit Facility from \$500 million to \$300 million in order to reduce our unused commitment fee. As a result of the voluntary reduction of our borrowing capacity, we proportionately reduced capitalized debt issuance costs by \$1.2 million. This write-down is included as additional interest expense in our

Table of Contents

accompanying Consolidated Statement of Income. The Credit Facility has a 3.5-year term, with a scheduled termination date of January 17, 2013. The Credit Facility includes a swing line facility and a letter of credit facility with a \$100.0 million sub-limit. Borrowings under the Credit Facility bear interest at a spread over the London Interbank Offer Rate ("LIBOR") that varies with our leverage ratio. On March 28, 2011, we amended the Credit Facility by lowering the applicable margins over LIBOR or Base rate borrowings that vary with our leverage ratio. The Credit Facility is collateralized directly or indirectly by substantially all of our assets and is guaranteed by certain of our subsidiaries. At December 30, 2011, we had \$209.8 million outstanding under the Credit Facility bearing interest at a per annum rate of 1.79%. In addition, we pay a fee on unused commitments.

The Credit Facility requires us to comply with certain financial and other covenants, including limitations on capital expenditures, the amount of dividends that can be paid in the future, the amount and types of liens and indebtedness, material asset sales and mergers. As of December 30, 2011, we were in compliance with all of the financial and other covenants contained in the Credit Facility.

At December 30, 2011, we had \$93.0 million available under committed working capital facilities, primarily under the Credit Facility. At December 30, 2011, we applied \$19.0 million to the letter of credit facility, comprised primarily of certain contingent obligations and other governmental agencies and purchases of equipment guarantees. We also had \$11.4 million in other letters of credit and bank guarantees not included in the letter of credit facility.

As of December 30, 2011, we had \$215.5 million of long-term debt and capital lease obligations, including the current portion, consisting of \$209.8 million outstanding under the Credit Facility, \$1.3 million of capital lease obligations and \$4.4 million of other long-term debt and notes payable.

Based on our operating plan, combined with our borrowing capacity under our Credit Facility, we believe we will have sufficient resources to meet our cash obligations in the foreseeable future. As of December 30, 2011, we had cash and cash equivalents of \$46.9 million.

As a result of abandoning isolated areas in the Philippines banana operations due to plant disease, melon program rationalization in Costa Rica and Guatemala and underutilized facilities in the United Kingdom, we paid approximately \$0.6 million in termination benefits and \$1.8 million in contractual obligations in 2011. We expect to make additional payments of approximately \$4.6 million principally related to under-utilized facilities in the United Kingdom and the previously announced closure of our Hawaii pineapple operations. In addition, we expect to pay approximately \$2.0 million in the next 12 months as a result of an unfavorable outcome to litigation regarding a tax position in a foreign jurisdiction. These cash outlays will be funded from operating cash flows and available borrowings under credit facilities.

The principal capital expenditures planned for 2012 consist primarily of the expansion and improvements of production facilities in Costa Rica, Guatemala, Chile, Kenya, Greece and the Philippines and for our distribution and fresh-cut facilities in North America and Saudi Arabia. We expect to fund our capital expenditures in 2012 through operating cash flows and borrowings under our Credit Facility. We generated cash from operations of \$195.7 million in 2011 and had \$71.2 million available under our Credit Facility as of December 30, 2011.

The fair value of our derivatives changed from a net liability of \$18.6 million as of December 31, 2010 to a net asset of \$7.7 million as of December 30, 2011, related to our foreign currency cash flow hedges. For foreign currency hedges, these fluctuations are primarily driven by the strengthening or weakening of the U.S. dollar compared to the euro, British pound and Japanese yen currencies being hedged relative to the contracted exchange rates. During 2011, we predominately entered into derivative contracts to hedge the British pound, euro and Japanese yen relative to our sales. We also entered into contracts to hedge the Kenya shilling, Costa Rica colon, Chilean peso and Brazilian real in order to hedge our production costs. The change in 2011 was primarily related to the stronger U.S. dollar relative to

the euro and British pound offset by the weaker U.S. dollar relative to the Japanese yen being hedged when compared to the contracted exchange rates. We enter into derivative instruments with counterparties that are highly rated and do not expect a deterioration of our counterparty's credit rating; however, the deterioration of our counterparty's credit would affect the Consolidated Financial Statements in the recognition of the fair value of the hedges that would be transferred to earnings as the contracts settle. We expect that a net gain of \$7.7 million of the fair value of hedges will be transferred to earnings in 2012 along with the earnings effect of the hedged forecasted transactions.

Other

We are involved in several legal and environmental matters that, if not resolved in our favor, could require significant cash outlays and could have a material adverse effect on our results of operations, financial condition and liquidity. See Item 1. Business Overview under "Environmental Matters" and Item 3. Legal Proceedings and Note 17, "Litigation" to the Consolidated Financial Statements included in Item 8. Financial Statements and Supplementary Data.

Table of Contents

Recent Developments

Subsequent to the year-ended December 30, 2011, we discovered a defalcation in our Uruguay operating unit. This fraud is currently being investigated, however we do not expect it to materially impact our results.

Critical Accounting Policies

We believe the following accounting policies used in the preparation of our Consolidated Financial Statements may involve a high degree of judgment and complexity and could have a material effect on our Consolidated Financial Statements.

Growing Crops

Expenditures on pineapple, melon and non-tropical fruit, including grapes, growing crops are valued at the lower of cost or market and are deferred and charged to cost of products sold when the related crop is harvested and sold. The deferred growing costs consist primarily of land preparation, cultivation, irrigation and fertilization costs. The deferred growing crop calculation is dependent on an estimate of harvest yields and future crop expenditures. If there is an unexpected decrease in estimated harvest yields, a write-down of deferred growing costs may be required. During 2009, we incurred a charge of \$17.1 million in cost of products sold primarily related to growing crop inventory as a result of our decision to discontinue pineapple operations in Brazil, in the other fresh produce segment. During 2010, we incurred a charge of \$3.7 million related to growing crop inventory as a result of our decision to discontinue melon operations in Brazil.

Stock-Based Compensation

Our share-based payments are composed entirely of compensation expense related to stock options and all stock option awards are granted to employees and members of our Board of Directors, each of whom meets the definition of an employee under the provisions of the Accounting Standards Codification™ (the “Codification” or “ASC”) guidance on “Compensation-Stock Compensation”. We use the Black-Scholes option pricing model to estimate the fair value of stock options granted.

Stock-based compensation expense related to stock options, restricted stock awards and restricted stock units, for the year ended December 30, 2011, included in the determination of income before provision for income taxes and net income, totaled \$9.2 million on the straight-line, single award basis, or \$0.16 per diluted share, respectively, and are included in the accompanying Consolidated Statements of Income for the year ended December 30, 2011 in selling, general and administrative expenses.

We realized an excess share-based payment deduction resulting from stock options exercised through a reduction in taxes currently payable and related effect on cash flows of \$2.9 million for the year ended December 30, 2011. We were in a net operating loss carryforward position in the relevant jurisdictions for the years ended 2009 and 2010, therefore there was no reduction in taxes currently payable or related effect on cash flows as the result of excess tax benefits from stock options exercised in these periods. The amount of cash received from the exercise of stock options was \$22.8 million for the year ended December 30, 2011. As of December 30, 2011, the total remaining unrecognized compensation costs related to non-vested stock options and Restricted Stock Units amounted to \$11.2 million and \$3.4 million respectively, which will be amortized over the weighted-average remaining requisite service period of 1.8 and 3 years respectively.

Goodwill and Indefinite-Lived Intangible Assets

We assess goodwill for impairment on an annual basis on the first day of the fourth quarter of each year, or sooner if events indicate such a review is necessary. Based on this valuation that is performed during the fourth quarter, we have determined that there was no additional impairment of goodwill in 2011, 2010 or 2009. However, during the second quarter of 2011, as a result of our Central America melon program rationalization, we recorded a \$3.3 million goodwill impairment charge. As of December 30, 2011, we were not aware of any items or events that would cause us to further adjust the recorded value of goodwill for impairment. Potential impairment exists if the fair value of a reporting unit to which goodwill has been allocated is less than the carrying value of the reporting unit. The amount of the impairment to recognize, if any, is calculated as the amount by which the carrying value of goodwill exceeds its implied fair value. Future changes in the estimates used to conduct the impairment review, including revenue projection, market values and changes in the discount rate used, could cause the analysis to indicate that our goodwill is impaired in subsequent periods and result in a write-down of a portion or all of goodwill. The discount rate used is based on independently calculated risks, our capital mix and an estimated market risk premium. The fair value of the prepared food unit's goodwill and trademarks and the melon and banana reporting units' goodwill are highly sensitive to differences between estimated and actual cash flows and changes in the related discount rate used to evaluate the fair value of these assets.

Table of Contents

If we are unable to recover from poor market conditions related to bananas, the banana reporting unit goodwill may be at risk for impairment in the future. If we are unable to recover from current challenging economic conditions in Europe, the prepared food reporting unit goodwill and trademarks may be at risk for impairment in the future.

The following table highlights the sensitivities of the goodwill and indefinite-lived intangibles at risk as of December 30, 2011 (U.S. dollars in millions)

Carrying Value	Banana	Prepared Food Reporting Unit		Remaining	
	Reporting Unit	Goodwill	U.K. Beverage Trademarks	DEL MONTE® Trademarks	
	\$64.8	\$72.2	\$4.8	\$63.6	
Approximate percentage by which the fair value exceeds the carrying value based on annual impairment test as of 1st day of fourth quarter	4.0	% 11.0	% 1.5	% 20.0	%
Amount that a one percentage point increase in the discount rate and a 5% decrease in cash flows would cause the carrying value to exceed the fair value and trigger a fair valuation	\$64.8	\$26.1	\$0.5	\$—	(1)

As of December 30, 2011, applying the sensitivities disclosed above does not result in the carrying value exceeding (1) the fair value; however, after applying those sensitivities, the fair value exceeds the carrying value by approximately 5%.

As part of the Del Monte Foods acquisition, we acquired perpetual, royalty-free licenses to use the DEL MONTE® brand for processed and/or canned food in more than 100 countries throughout Europe, Africa, the Middle East and countries formerly part of the Soviet Union. Included in other non-current assets at December 30, 2011 is an indefinite-lived intangible asset of \$68.4 million related to these licenses. This indefinite-lived intangible asset is not being amortized but is reviewed for impairment consistent with the Codification guidance on “Intangibles – Goodwill and Other”. In 2010 and 2009, we recorded charges for impairment of the DEL MONTE® royalty-free brand name license for U.K. beverage products due to lower than expected sales volume and pricing of \$1.4 million and \$2.0 million, respectively. As of December 30, 2011, we are not aware of any items or events that would cause a further adjustment to the carrying value of goodwill.

Impairment of Long-Lived Assets

We account for the impairment of long-lived assets in accordance with the Codification guidance related to “Property, Plant and Equipment”. The Codification guidance requires write-downs to be recorded on long-lived assets used in operations when indicators of impairment are present and the undiscounted cash flows estimated to be generated by those assets are less than the assets’ carrying amount. In 2009, we recorded asset impairment charges of \$13.3 million due to our decision to discontinue pineapple planting in Brazil, our decision not to use certain property, plant and equipment as originally intended for other crop production and an impairment of an intangible asset for a non-compete agreement as a result of the Caribana acquisition. During 2010, we recorded \$37.3 million in asset impairment charges due to the sale of our investment in a canning operation in South Africa, disease affecting an isolated area of our

Philippines banana operation, flood damage to our banana plantation in Guatemala, earthquake damage to our non-tropical fruit operations in Chile and the relocation of a port facility in North America. During 2011, we recorded \$16.7 million in asset impairments principally related to under-utilized facilities in the United Kingdom, melon program rationalization in Central America, abandoned banana producing areas in Costa Rica due to low productivity and an unconsolidated investment in Ecuador.

In assessing potential impairment, we consider the operating performance and projected undiscounted cash flows of the relevant assets. If the projected cash flows are estimated to be less than the assets' carrying value, we may have to record additional impairment charges. The fair value of the assets is determined based on discounted future cash flows or independent appraisals from third parties.

Table of Contents

Income Taxes

Deferred income taxes are recognized for the tax consequences in future years of differences between the tax basis of assets and liabilities and their financial reporting amounts at each year end, based on enacted tax laws and statutory tax rates applicable to the year in which the differences are expected to affect taxable income. Valuation allowances are established when it is deemed more likely than not that some portion or all of the deferred tax assets will not be realized. Our judgments regarding future profitability may change due to future market conditions and other factors. These changes, if any, may require adjustments to our deferred tax assets.

Contingencies

Estimated losses from contingencies are expensed if it is probable that an asset has been impaired or a liability has been incurred at the date of the financial statements and the amount of the loss can be reasonably estimated. Gain contingencies are not reflected in the financial statements until realized. We use judgment in assessing whether a loss contingency is probable and estimable. Actual results could differ from these estimates.

Environmental Remediation Liabilities

Estimated expenses associated with environmental remediation obligations are accrued when such expenses are probable and can be reasonably estimated. We have recorded provisions for the Kunia Well Site related to the expected environmental remediation. The related liability is based on the Record of Decision, which was issued by the EPA on September 25, 2003. Certain portions of the EPA's estimates have been discounted using a 5% interest rate. In 2004, we commenced certain remediation and further testing activities. At December 31, 2010 and January 1, 2010, the total liability for the Kunia Well Site was \$19.0 million and \$19.9 million, respectively. We expect to expend approximately \$0.5 million in cash per year for the next five years. The ultimate amount of the cost for the expected environmental remediation of the Kunia Well Site is dependent on the actual cost. Actual remediation costs could significantly differ from our estimates.

Derivative Financial Instruments

We account for derivative financial instruments in accordance with the ASC guidance on "Derivatives and Hedging". The ASC on "Derivatives and Hedging" requires us to recognize the value of derivative instruments as either assets or liabilities in the statement of financial position at fair value. The accounting for changes in the fair value (i.e., gains or losses) of a derivative instrument depends on whether it has been designated as a hedge and qualifies as part of a hedging relationship. The accounting also depends on the type of hedging relationship, whether a cash flow hedge, a fair value hedge, or hedge of a net investment in a foreign operation. A fair value hedge requires that the effective portion of the change in the fair value of a derivative financial instrument be offset against the change in the fair value of the underlying asset, liability, or firm commitment being hedged through earnings. A cash flow hedge requires that the effective portion of the change in the fair value of a derivative instrument be recognized in other comprehensive income, a component of shareholders' equity, and reclassified into earnings in the same period or periods during which the hedged transaction affects earnings. The ineffective portion of the change in fair value of a derivative instrument is to be recognized in earnings in the same line in which the hedge transaction affects earnings. The ineffective portion of the change in fair value is immaterial for the year ended December 30, 2011 and December 31, 2010.

We use derivative financial instruments primarily to reduce our exposure to adverse fluctuations in foreign exchange rates. When entered into, we formally designate and document the financial instrument as a hedge of a specific underlying exposure, as well as the risk management objectives and strategies for undertaking the hedge transaction.

The fair values of derivatives used to hedge or modify our risks fluctuate over time. These fair value amounts should not be viewed in isolation, but rather in relation to the cash flows or fair value of the underlying hedged transactions or assets and other exposures and to the overall reduction in our risk relating to adverse fluctuations in foreign exchange rates.

We account for the fair value of our derivative financial instruments as either an asset in other current assets or noncurrent assets or a liability in accrued expenses or other noncurrent liabilities. We use an income approach to value our outstanding foreign currency. An income approach consists of a discounted cash flow model that takes into account the present value of future cash flows under the terms of the contracts using current market information as of the measurement date such as foreign currency spot and forward rates. An element of default risk based on observable inputs is also built into the fair value calculation.

Table of Contents

Fair Value Measurements

We measure fair value for financial instruments, such as derivatives on an ongoing basis. We measure fair value for non-financial assets, when a valuation is necessary, such as for impairment of long-lived and indefinite-lived assets when indicators of impairment exist. Fair value is measured in accordance with the ASC on “Fair Value Measurements and Disclosures”. The ASC on “Fair Value Measurements and Disclosures” defines fair value, establishes a framework for measuring fair value and enhances disclosures about fair value measures required under other accounting pronouncements, but does not change existing guidance as to whether or not an instrument is carried at fair value. The ASC also requires us to classify fair value measurements based on the weight of observable and unobservable valuation inputs as follows: Level 1: inputs are derived from quoted prices in active markets for identical assets; Level 2: inputs are derived from significant other observable inputs and Level 3: inputs utilized are not observable.

During 2011, we recognized \$4.3 million in asset impairment charges related to an under-performing fresh-cut facility in the United Kingdom in the other fresh produce segment. The carrying value of these assets was \$6.6 million in property, plant and equipment consisting of land, building and machinery and equipment. Property, plant and equipment were written down to a fair value of \$2.3 million. We estimated the fair value of the underlying assets by using the market approach. The market approach uses prices and other relevant information generated by market transactions involving comparable assets. We used observable inputs based on market participant information, as such, we classify the fair value of these assets as Level 2 of the fair value hierarchy.

During 2011, we recognized \$4.7 million in asset impairment and other charges including \$2.5 million in contract termination costs and \$2.2 million as a result of the under-utilized distribution centers in the United Kingdom in the banana segment. The carrying value of these assets was \$8.4 million in property, plant and equipment consistent of land building and machinery and equipment. Property, plant and equipment were written down to a fair value of \$6.2 million. We estimated the fair value of these assets using a combination of an income based approach and market approach considering the cash flows that would be obtained as a result of banana ripening services and eventual sale of the assets at the end of their useful life. The above mentioned contract termination costs related to the closure of a distribution facility and reduction of office space. We estimated the fair value of this obligation using an income based approach, whereby our cash flows are adjusted for a market premium risk. The fair valuation of the assets and contract termination obligation of \$9.8 million are classified as Level 3 of the fair value hierarchy due to the mix of unobservable inputs utilized.

During 2011, we recognized \$7.9 million in impairment charges related to the melon program rationalization. During the second quarter and as a result of the decision to discontinue planting certain melon varieties in Central America, we reviewed the carrying value of the melon assets. The carrying value of these assets was \$10.5 million including \$7.2 million in property, plant and equipment consisting primarily of buildings and machinery and equipment and \$3.3 million of melon goodwill. Property, plant and equipment were written down to a fair value of \$2.6 million. We estimated the fair value of these assets using the income based approach considering the cash flows that would be obtained as a result of the production and distribution of melons in areas of continued production. The income based approach utilizes unobservable inputs. Due to the use of unobservable inputs, we classify the fair value of these growing areas within Level 3 of the fair value hierarchy.

As a result of the decision to discontinue planting certain melon varieties in Central America, which significantly reduced melon volumes in the future, we estimated an implied fair value of the melon reporting unit's goodwill by allocating the fair value of the reporting unit to all of the assets and liabilities other than goodwill (including any unrecognized intangible assets). This exercise yielded a write-down of the melon goodwill of \$3.3 million.

During 2010 and 2009, we recognized impairment charges of \$1.4 million and \$2.0 million, respectively, related to the Del Monte indefinite-lived intangible of a perpetual, royalty-free brand name license due to lower than expected

sales volumes and pricing in the United Kingdom in the prepared foods segment specifically related to beverage products. An income-based approach was used to value the trademark intangible, which measures the fair value of an intangible asset by capitalizing the royalties saved due to ownership of the intangible asset rather than paying a rent or royalty for the use of the asset. This income-based approach referred to as the royalty savings method utilizes internal unobservable inputs such as a discounted net sales cash flow model with the application of a royalty savings rate assumption corroborated by a mix of internal and market inputs. Due to the use of unobservable inputs, we classify the fair value of this indefinite-lived intangible asset within Level 3 of the fair value hierarchy.

During the second quarter of 2010, we entered into an agreement to sell substantially all the assets of our South Africa canning operations. As a result, we recognized a \$16.7 million asset impairment of our investment in South Africa in the prepared food reporting segment. The carrying value of our investment in South Africa was \$24.4 million, including cumulative translation adjustments, and was written down to a fair value of \$7.7 million. We estimated the fair value of the underlying assets by using

Table of Contents

the market approach. The market approach uses prices and other relevant information generated by market transactions involving comparable assets. We used observable inputs based on market participant information related to the probable sale of South African assets and, as such, we classify the fair value of the investment in South Africa within Level 2 of the fair value hierarchy. We received the regulatory approval for the sale of our South Africa canning operations effective October 11, 2010. On October 12, 2010, the sale of our South Africa canning operations was executed by the receipt of approximately \$1.5 million in cash and \$6.9 million recorded as a financing receivable, which was collected on January 27, 2011.

During the fourth quarter of 2010, we recognized \$12.7 million in impairment charges related to plant disease affecting an isolated growing area in our banana operations in the Philippines that was abandoned in 2011 in the banana segment. The carrying value of these assets was \$13.5 million and was written down to a fair value of \$0.8 million. We estimated the fair value of these assets using the income based approach considering the cash flows that would be obtained as a result of the production and distribution of bananas over the next few months prior to abandoning the growing areas impacted by disease. The income based approach utilizes unobservable inputs. Due to the use of unobservable inputs, we classify the fair value of these growing areas within Level 3 of the fair value hierarchy.

We recorded \$10.5 million in asset impairment and other charges (credits) resulting from our decision in May 2009 to discontinue pineapple planting in Brazil and our subsequent decision, during the third quarter, not to use certain property, plant and equipment as originally intended for other crop production. The carrying value of these assets was \$17.4 million and was written down to a fair value of \$6.9 million. We estimated the fair value of the underlying assets by using a combination of the market approach and the cost approach. The cost approach is based on the amount that currently would be required to replace the service capacity of the assets. The market approach uses prices and other relevant information generated by market transactions involving comparable assets. We used a combination of observable inputs primarily based on appraisals and unobservable inputs using market participant assumptions to estimate the fair value of the underlying assets. Due to the use unobservable inputs, we classify the fair value of these long-lived assets within Level 3 of the fair value hierarchy.

New Accounting Pronouncements

In September 2011, the Financial Accounting Standards Board (“FASB”) issued an Accounting Standards Update (“ASU”) to amend the guidance in the ASC related to Intangibles - Goodwill and Other. This amendment provides us the option of performing a qualitative assessment before calculating the fair value of the reporting unit. If it is determined that the fair value of the reporting unit is more likely than not less than the carrying amount, on the basis of qualitative factors, the two-step impairment test would be required. The amendment is effective for annual and interim goodwill impairment tests performed for our 2012 fiscal year, with earlier adoption permitted. This ASU impacts the manner in which goodwill is assessed for impairment but does not change how goodwill is calculated or assigned to reporting units, nor does it revise the requirement to test goodwill annually for impairment. It also does not change the requirement to test goodwill for impairment between annual tests if there are indicators of impairment. This ASU has no effect on our financial condition, results of operations or cash flows.

In June 2011, the FASB issued an ASU to amend guidance in the ASC related to the Presentation of Comprehensive Income. This amendment requires us to present the components of net income and other comprehensive income either as one continuous statement or as two consecutive statements. It eliminates the option to present components of other comprehensive income as part of the statement of changes in stockholders' equity. The amended guidance, which must be applied retroactively, is effective for interim and annual periods beginning the first day of our 2012 fiscal year, with earlier adoption permitted. This ASU impacts presentation only and it will have no effect on our financial condition, results of operations or cash flows.

In May 2011, the FASB issued an ASU to amend the guidance in the ASC on Fair Value Measurements and Disclosures. This amendment is intended to result in convergence between U.S. GAAP and International Financial Reporting Standards requirements for measurement of and disclosures about fair value. This guidance clarifies the application of existing fair value measurements and disclosures, and changes certain principles or requirements for fair value measurements and disclosures. The amendment is effective for interim and annual periods beginning the first day of our 2012 fiscal year. We are currently evaluating the impact, if any, of adopting this ASU to our financial condition, results of operations or cash flows.

Trend Information

Our net sales are affected by numerous factors, including mainly the balance between the supply of and demand for our produce and competition from other fresh produce companies. Our net sales are also dependent on our ability to supply a consistent volume and quality of fresh produce to the markets we serve. For example, seasonal variations in demand for bananas as a result of increased supply and competition from other fruit are reflected in the seasonal fluctuations in banana prices, with the first six months of each year generally exhibiting stronger demand and higher prices, except in those years where an excess supply exists. During the first part of 2011 banana supplies were not as plentiful as in the prior year. In 2011, our overall banana sales

Table of Contents

volume decreased by 2% while our average per unit sales prices increased by 4%. Our net sales of other fresh produce were positively impacted by increased sales volumes of fresh-cut fruit, non-tropical fruit and pineapples. In the processed foods business, we generally realize the largest portion of our net sales and gross profit in the third and fourth quarters of the year. During 2011, our prepared food net sales decreased slightly principally as a result of lower sales of canned deciduous products that resulted from reduced sourcing from South Africa.

Our strategy is focused on a combination of maximizing revenues from our existing infrastructure, entering new markets and strict cost control initiatives. We plan to continue to capitalize on the growing global demand for fresh produce and expand our reach into existing and new markets. We expect sales growth of fresh produce in key markets by increasing sales volume and per unit sales prices as permitted by market conditions. Our strategy includes increasing volumes from existing production and distribution facilities in order to improve operating efficiencies and reduce per unit costs. We plan additional investments in production facilities in order to expand our product offering in established markets and continue with our recent expansion in growth markets, such as the Middle East, Africa and countries formerly part of the Soviet Union.

In the pineapple, grape and non-tropical fruit markets, we believe that the high degree of capital investment and cultivation expertise required, as well as the longer length of the growing cycle, makes it relatively difficult to enter the market. However, in recent years we have experienced an increase in competition with respect to our Del Monte Gold® Extra Sweet pineapple, which has affected our results. We expect these competitive pressures to continue in 2012.

In the EU, the banana import tariff system that has been in effect since 2006 was modified in 2010. On December 15, 2009, the EU entered into an agreement with certain Latin America banana exporting countries to settle the long running dispute over banana import tariffs. This agreement was ratified in May, 2010. Under this agreement, the EU gradually reduces import tariffs on bananas from Latin America on an annual basis from the current level of €143 per ton in 2011 to €114 per ton in 2017. The import tariff is reduced at the beginning of each year, as follows: 2012-€136, 2013-€132, 2014-€127, 2015-€122, 2016-€117 and 2017-€114. In addition, the EU has entered into Free Trade Agreements with Colombia, Peru and five Central American countries. Under these bilateral trade agreements, duties on bananas will fall progressively to €75 per ton by 2020. The EU continues to negotiate Free Trade Agreements with Latin America banana-producing countries and there is a possibility that some form of new EU banana tariff-rate quotas will be reinstated. We cannot predict the impact of these changes in banana import tariffs on the EU market.

Our costs are determined in large part by the prices of fuel and packaging materials, including containerboard, plastic, resin and tin plate. Any significant increase in the cost of these items could also materially and adversely affect our operating results. Other than the cost of our products (including packaging), sea and inland transportation costs represent the largest component of cost of products sold. During 2009, fuel prices decreased by 32% and containerboard decreased 24% as compared with 2008. During 2010 fuel prices increased by 25% and containerboard prices increased by 7% as compared with 2009, increasing cost of product sold by \$30.7 million. During 2011, cost of fuel increased by 37% and containerboard decreased 8%, increasing our cost of products sold by \$49.7 million. We expect the cost of fuel to continue to increase and containerboard to remain relatively flat in 2012. In addition, we are subject to the volatility of the charter vessel market because 12 of our refrigerated vessels are chartered rather than owned. These charters are for periods of three to 10 years. Charter rates have generally remained stable over the past three years but are subject to fluctuations in the future. During 2009, we entered into 10-year agreements to charter four new vessels. Two of these new vessels were put into service during 2009 and the remaining two during 2010. We believe that our fleet of owned vessels combined with longer-term charters is effective in reducing our ocean freight costs and mitigates our exposure to the volatility of the charter market.

Table of Contents

Tabular Disclosure of Contractual Obligations

The following details information with respect to our contractual obligations as of December 30, 2011.

Contractual obligations by period	(U.S. dollars in millions)				
	Total	Less than 1 year	1 - 3 years	3 - 5 years	More than 5 years
Fruit purchase agreements	\$1,161.2	\$336.9	\$533.7	\$253.6	\$37.0
Purchase obligations	173.9	144.0	26.6	1.5	1.8
Operating leases and charter agreements	346.4	66.8	97.1	72.4	110.1
Capital lease obligations (including interest)	1.4	0.9	0.5	—	—
Long-term debt	214.2	1.4	212.8	—	—
Retirement benefits	85.4	8.7	16.8	17.0	42.9
Uncertain tax positions	9.5	8.0	1.1	—	0.4
Totals	\$1,992.0	\$566.7	\$888.6	\$344.5	\$192.2

We have agreements to purchase the entire or partial production of certain products of our independent growers in Costa Rica, Guatemala, Ecuador, Cameroon, Colombia, Chile, the United States and the Philippines that meet our quality standards. Total purchases under these agreements amounted to \$704.6 million, \$722.2 million and \$671.4 million for 2011, 2010 and 2009, respectively.

Item 7A. Quantitative and Qualitative Disclosures About Market Risk

We are exposed to market risk from changes in currency exchange rates and interest rates, which may adversely affect our results of operations and financial condition. We seek to minimize the risks from these currency exchange rate and interest rate fluctuations through our regular operating and financing activities and, when considered appropriate, through the use of derivative financial instruments. Our policy is to not use financial instruments for trading or other speculative purposes and not to be a party to any leveraged financial instruments.

We manage our currency exchange rate risk by hedging a portion of our overall exposure using derivative financial instruments. We also have procedures to monitor the impact of market risk on the fair value of long-term debt, short-term debt instruments and other financial instruments, considering reasonably possible changes in currency exchange and interest rates.

Exchange Rate Risk

Because we conduct our operations in many areas of the world involving transactions denominated in a variety of currencies, our results of operations as expressed in U.S. dollars may be significantly affected by fluctuations in rates of exchange between currencies. These fluctuations could be significant. Approximately 42% of our net sales and a significant portion of our costs and expenses in 2011 were denominated in currencies other than the dollar. We generally are unable to adjust our non-dollar local currency sales prices to reflect changes in exchange rates between the dollar and the relevant local currency. As a result, changes in exchange rates between the euro, Japanese yen, British pound or other currencies in which we receive sale proceeds and the dollar have a direct impact on our operating results. There is normally a time lag between our sales and collection of the related sales proceeds, exposing us to additional currency exchange rate risk.

To reduce currency exchange rate risk, we generally exchange local currencies for dollars promptly upon receipt. We periodically enter into currency forward contracts as a hedge against a portion of our currency exchange rate exposures; however, we may decide not to enter into these contracts during any particular period. As of December 30,

2011, we had several foreign currency cash flow hedges outstanding. The fair value of these hedges as of that date was a net asset of \$7.7 million.

The results of a hypothetical 10% strengthening in the average value of the dollar during 2011 relative to the other currencies in which a significant portion of our net sales are denominated would have resulted in a decrease in net sales of approximately \$141.0 million for the year ended December 30, 2011. This calculation assumes that each exchange rate would change in the same direction relative to the dollar. Our sensitivity analysis of the effects of changes in currency exchange rates does not factor in a potential change in sales levels or any offsetting gains on currency forward contracts.

Table of Contents

Interest Rate Risk

As described in Note 12, “Long-Term Debt and Capital Lease Obligations” to the Consolidated Financial Statements, our indebtedness is both variable and fixed rate.

At December 30, 2011, our variable rate total debt had a carrying value of \$214.2 million. The fair value of the debt approximates the carrying value because the variable rates approximate market rates. A 10% increase in the interest rate for 2011 would have resulted in a negative impact of approximately \$0.3 million on our results of operations for the year ended December 30, 2011.

The above discussion of our procedures to monitor market risk and the estimated changes in fair value resulting from our sensitivity analysis are forward-looking statements of market risk assuming certain adverse market conditions occur.

Actual results in the future may differ materially from these estimated results due to actual developments in the global financial markets. The analysis methods we used to assess and mitigate risk discussed above should not be considered projections of future events or losses.

Management's Annual Report on Internal Control Over Financial Reporting

Our management is responsible for establishing and maintaining adequate internal control over financial reporting, as defined in Rules 13a-15(f) and 15d-15(f) under the Securities Exchange Act of 1934. The Company's internal control over financial reporting is designed under the supervision of our Chairman and Chief Executive Officer and Senior Vice President and Chief Financial Officer to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. Our internal control over financial reporting includes those policies and procedures that:

- (i). Pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of our assets;
- (ii). Provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures are being made only in accordance with authorizations of our management and directors; and
- (iii). Provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use or disposition of our assets that could have a material effect on the financial statements.

Under the supervision and with the participation of our management, including our Chairman and Chief Executive Officer and Senior Vice President and Chief Financial Officer, we conducted an evaluation of the effectiveness of our internal control over financial reporting based on the framework in Internal Control-Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

Based on our evaluation under the framework in Internal Control-Integrated Framework, our management concluded that our internal control over financial reporting was effective as of December 30, 2011.

The effectiveness of our internal control over financial reporting as of December 30, 2011 has been audited by Ernst & Young LLP, an independent registered public accounting firm, as stated in their report that is included elsewhere herein. That report expresses an unqualified opinion on the effectiveness of our internal control over financial reporting.

Fresh Del Monte Produce Inc.

Report of Independent Registered Public Accounting Firm on Internal Control Over Financial Reporting

The Board of Directors and Shareholders of
Fresh Del Monte Produce Inc.

We have audited Fresh Del Monte Produce Inc. and subsidiaries' internal control over financial reporting as of December 30, 2011, based on criteria established in Internal Control-Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (the COSO criteria). Fresh Del Monte Produce Inc. and subsidiaries' management is responsible for maintaining effective internal control over financial reporting, and for its assessment of the effectiveness of internal control over financial reporting included in the accompanying Management's Annual Report on Internal Control Over Financial Reporting. Our responsibility is to express an opinion on the company's internal control over financial reporting based on our audit.

We conducted our audit in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. Our audit included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, testing and evaluating the design and operating effectiveness of internal control based on the assessed risk, and performing such other procedures as we considered necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinion.

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

In our opinion, Fresh Del Monte Produce Inc. and subsidiaries maintained, in all material respects, effective internal control over financial reporting as of December 30, 2011, based on the COSO criteria.

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the consolidated balance sheets of Fresh Del Monte Produce Inc. and subsidiaries as of December 30, 2011 and December 31, 2010, and the related consolidated statements of income, shareholders' equity, and cash flows for each of the three years in the period ended December 30, 2011 of Fresh Del Monte Produce Inc. and subsidiaries, and our report dated February 28, 2012 expressed an unqualified opinion thereon.

Report of Independent Registered Public Accounting Firm

The Board of Directors and Shareholders of
Fresh Del Monte Produce Inc.

We have audited the accompanying consolidated balance sheets of Fresh Del Monte Produce Inc. and subsidiaries as of December 30, 2011 and December 31, 2010, and the related consolidated statements of income, shareholders' equity, and cash flows for each of the three years in the period ended December 30, 2011. Our audits also included the financial statement schedule listed in the Index at Item 15. These financial statements and schedule are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements and schedule based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, the financial statements referred to above present fairly, in all material respects, the consolidated financial position of Fresh Del Monte Produce Inc. and subsidiaries at December 30, 2011 and December 31, 2010, and the consolidated results of their operations and their cash flows for each of the three years in the period ended December 30, 2011, in conformity with U.S. generally accepted accounting principles. Also, in our opinion, the related financial statement schedule, when considered in relation to the basic financial statements taken as a whole, presents fairly in all material respects the information set forth therein.

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), Fresh Del Monte Produce Inc.'s internal control over financial reporting as of December 30, 2011, based on criteria established in Internal Control-Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission and our report dated February 28, 2012 expressed an unqualified opinion thereon.
