### Quarterly Production Report

Release time Immediate  
Date 30 April 2001  
Quarter Ended 31 March 2001

## Minerals

### - Steelmaking and Energy Materials

	quarter	% change	YTD	% change
<b>Coal</b> (Queensland) ( <i>millions tonnes</i> )	7.879	25	21.654	15
<b>Iron Ore</b> (West Aust)* ( <i>millions tonnes</i> )	13.389	10	43.164	14
<b>Briquettes</b> (West Aust) ( <i>'000 tonnes</i> )	176.5	180	573	78

(\*BHP has changed the basis for reporting its share of iron ore production and shipments from Dry Metric Tonnes to Wet Metric Tonnes.)

Queensland coal production for the quarter ended 31 March 2001 was higher due to the acquisition of QCT Resources Limited in November 2000 and increased volumes at the Blackwater mine following the opening of the Bonnie Doon pit in February 2000. Production at South Walker Creek was also higher following the upgrade of the Coal Preparation Plant, which was commissioned in September 2000. This was in part offset by lower production at the Peak Downs and Crinum mines as a result of industrial action. New Mexico Coal recorded increased production as a result of the California power crisis and higher tonnage requirements from the San Juan Generating Station. Thermal coal production increased on the corresponding quarter, although shipments declined due to scheduling.

WA iron ore production and shipments were higher for the quarter reflecting increased sales and better weather conditions than the corresponding quarter last year. Increased sales of fines were also recorded in all markets

Production at BHP's WA HBI plant for the quarter has been short of expectations due to heavy rainfall, a cyclone and a power failure. However, a new campaign length record of 138 days was achieved and learnings and improvements are continuing. Orinoco HBI commentary will no longer be provided following BHP's announcement on 29 March 2001 that it would write-off its equity investment and cease any further investment in the project.

### - Non-Ferrous and Industrial Materials

	quarter	% change	YTD	% change
<b>Copper in concentrate</b> ( <i>'000 tonnes</i> )	174	(2)	553	3
<b>Diamonds</b> (Ekati) ( <i>'000 carats</i> )	375	27	1 001	8
<b>Silver in concentrate</b> (Cannington) ( <i>'000 ounces</i> )	6 989	(11)	23 378	9

Production of copper in concentrate for the quarter ended 31 March 2001 reflected lower head grade and copper recovery at Escondida. Tintaya production declined during the quarter due to lower head grade and interruptions resulting from wet weather. In addition, lower shipments at Tintaya reflect deferrals to the June 2001 quarter.

Ekati diamond production was higher than the corresponding quarter last year due to increased plant capacity following a primary crusher upgrade and commissioning of an x-ray sorter. Carat grades in the March 2001 quarter were also higher as a result of mining the north part of the Panda pipe, which has historically contained higher grade ore.

Cannington silver production was lower for the quarter compared to the same period last year due to lower head grades resulting in lower concentrate production. Shipments for the quarter were higher as a result of a record shipping month in January 2001.

## Petroleum

	quarter	% change	YTD	% change
<b>Oil &amp; Condensate</b> ( <i>'000 barrels</i> )	19 911	(10)	60 730	3
<b>Natural Gas</b> ( <i>bcf</i> )	67.6	14	190.2	8

Oil and condensate production for the quarter ending 31 March 2001 was lower compared to the corresponding quarter last year due to natural field decline at Bass Strait and the sale of the Buffalo field in September 2000. This was in part offset by higher production from the Griffin field due to successful infill drilling. Production levels at Liverpool Bay were also higher for the quarter.

Gas production for the period was higher than the corresponding quarter last year reflecting the commencement of sales to New South Wales and the addition of production from the Zamzama field in Pakistan and the Keith field in the North Sea.

## Steel

	quarter	% change	YTD	% change
<b>Raw Steel</b> (Core) ( <i>'000 tonnes</i> )	1 277	(6)	4 104	0
<b>Raw Steel</b> (Discot.)* ( <i>'000 tonnes</i> )	0	-	508	(65)

(\*Figures reflect the spinout of OneSteel, effective 31 October 2000.)

Raw steel production (core steel operations) for the quarter was lower than for the corresponding period last year due to industrial disputes and planned maintenance at the Port Kembla steelworks. This was partly offset by increased production at Offshore Rolled and Coated Products operations and the Delta, Ohio mini-mill. Steel despatches were also higher for the quarter.

(1) Production and shipments data includes BHP's share of production from joint ventures and 100% of production from controlled entities (unless otherwise stated).

(2) BHP has changed the basis for reporting Iron Ore production and shipments from dry tonnes to wet tonnes. Comparative data presented above has been restated accordingly. Restated data for the 12 months ended 30 June 2000 and the six months ended 31 December 2000 has been included in this report as supplementary information.

(3) Production & shipments reported is the proportion of total production & shipments determined by BHP's equity interest in Samarco Mineracao (50%) and Orinoco Iron C.A. (50%).

(SXEW)

- (1) Production and shipments data includes BHP's share of production from joint ventures and 100% of production from controlled entities (unless otherwise stated).
- (2) Material mined, ore treated and average head grade data is based on total mine activity. All copper operations are controlled entities except Escondida, Chile which is a joint venture (BHP share 57.5%).
- (3) Following the announcement on 25 June 1999, production at North American copper operations have ceased, other than SXEW operations which continue at the Pinto Valley and San Manuel mines.

## MINERALS (1)

### Diamonds (2)

#### Ekati, Canada

##### Production

- Diamonds	('000 carats)	375	318	296	1 001	931
------------	---------------	-----	-----	-----	-------	-----

### Silver, Lead & Zinc

#### Cannington, Australia
