**FARMERS & MERCHANTS BANCORP**  
NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS (Unaudited)

**1. Significant Accounting Policies**

Farmers & Merchants Bancorp (the Company) was organized March 10, 1999. Primary operations are related to traditional banking activities through its subsidiary Farmers & Merchants Bank of Central California (the Bank) which was established in 1916. The Bank's wholly owned subsidiaries include Farmers & Merchants Investment Corporation and Farmers/Merchants Corp. Farmers & Merchants Investment Corporation has been dormant since 1991. Farmers/Merchants Corp. acts as trustee on deeds of trust originated by the Bank.

The Company's other subsidiaries include F & M Bancorp, Inc. and FMCB Statutory Trust I. F & M Bancorp, Inc. was created in March 2002 to protect the name F & M Bank. During 2002, the Company completed a fictitious name filing in California to begin using the streamlined name, "F & M Bank" as part of a larger effort to enhance the Company's image and build brand name recognition. In December 2003, the Company formed a wholly owned subsidiary, FMCB Statutory Trust I. FMCB Statutory Trust I is a non-consolidated subsidiary per generally accepted accounting principles (GAAP), and was formed for the sole purpose of issuing Trust Preferred Securities. The accounting and reporting policies of the Company conform to accounting principles generally accepted in the United States of America and prevailing practice within the banking industry. The following is a summary of the significant accounting and reporting policies used in preparing the consolidated financial statements.

*Basis of Presentation*

The accompanying consolidated financial statements of the Company have been prepared in accordance with accounting principles generally accepted in the United States of America for interim financial information and with the instructions to Form 10-Q and Article 10 of Regulation S-X. In the opinion of management, all adjustments (which consist solely of normal recurring accruals) considered necessary for a fair presentation of the results for the interim periods presented have been included. These interim consolidated financial statements should be read in conjunction with the financial statements and related notes contained in the Company's 2006 Annual Report to Shareholders on Form 10-K.

The accompanying consolidated financial statements include the accounts of the Company and the Company's wholly owned subsidiaries, F & M Bancorp, Inc. and the Bank, along with the Bank's wholly owned subsidiaries, Farmers & Merchants Investment Corporation and Farmers/Merchants Corp. Significant inter-company transactions have been eliminated in consolidation. The results of operations for the six-month period ended June 30, 2007 may not necessarily be indicative of the operating results for the full year 2007.

The preparation of consolidated financial statements in conformity with accounting principles generally accepted in the United States of America requires management to make estimates and assumptions. These estimates and assumptions affect the reported amounts of assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reporting period. Actual results could differ from these estimates.

Certain amounts in the prior years' financial statements and related footnote disclosures have been reclassified to conform to the current-year presentation. These reclassifications have no effect on previously reported income.

*Cash and Cash Equivalents*

For purposes of the Consolidated Statement of Cash Flows, the Company has defined cash and cash equivalents as those amounts included in the balance sheet captions Cash and Due from Banks, Federal Funds Sold and Securities Purchased Under Agreements to Resell. Generally, these transactions are for one-day periods. For these instruments, the carrying amount is a reasonable estimate of fair value.

Table of Contents

*Investment Securities*

Investment securities are classified at the time of purchase as held-to-maturity if it is management's intent and the Company has the ability to hold the securities until maturity. These securities are carried at cost, adjusted for amortization of premium and accretion of discount using a level yield of interest over the estimated remaining period until maturity. Losses, reflecting a decline in value judged by the Company to be other than temporary, are recognized in the period in which they occur.

Securities are classified as available-for-sale if it is management's intent, at the time of purchase, to hold the securities for an indefinite period of time and/or to use the securities as part of the Company's asset/liability management strategy. These securities are reported at fair value with aggregate unrealized gains or losses excluded from income and included as a separate component of shareholders' equity, net of related income taxes. Fair values are based on quoted market prices or broker/dealer price quotations on a specific identification basis. Gains or losses on the sale of these securities are computed using the specific identification method.

Trading securities, if any, are acquired for short-term appreciation and are recorded in a trading portfolio and are carried at fair value, with unrealized gains and losses recorded in non-interest income.

Investment securities are evaluated for impairment on at least a quarterly basis and more frequently when economic or market conditions warrant such an evaluation to determine whether a decline in their value is other than temporary. Management utilizes criteria such as the magnitude and duration of the decline and the intent and ability of the Company to retain its investment in the securities for a period of time sufficient to allow for an anticipated recovery in fair value, in addition to the reasons underlying the decline, to determine whether the loss in value is other than temporary. The term "other than temporary" is not intended to indicate that the decline is permanent, but indicates that the prospects for a near-term recovery of value are not necessarily favorable, or that there is a lack of evidence to support a realizable value equal to or greater than the carrying value of the investment. Once a decline in value is determined to be other than temporary, the value of the security is reduced and a corresponding charge to earnings is recognized.

*Loans*

Loans are reported at the principal amount outstanding net of unearned discounts and deferred loan fees. Interest income on loans is accrued daily on the outstanding balances using the simple interest method. Loan origination fees are deferred and recognized over the contractual life of the loan as an adjustment to the yield. Loans are placed on non-accrual status when the collection of principal or interest is in doubt or when they become past due for 90 days or more unless they are both well-secured and in the process of collection. For this purpose, a loan is considered well secured if it is collateralized by property having a net realizable value in excess of the amount of the loan or is guaranteed by a financially capable party. When a loan is placed on non-accrual status, the accrued and unpaid interest receivable is reversed and charged against current income; thereafter, interest income is recognized only as it is collected in cash. Loans placed on a non-accrual status are returned to accrual status when the loans are paid current as to principal and interest and future payments are expected to be made in accordance with the contractual terms of the loan.

A loan is impaired when, based on current information and events, it is probable that the Company will be unable to collect all amounts due according to the contractual terms of the loan agreement. When a loan is impaired, the recorded amount of the loan in the Consolidated Balance Sheet is based on the present value of expected future cash flows discounted at the loan's effective interest rate, or the observable or estimated market price of the loan or on the fair value of the collateral if the loan is collateral dependent. Impaired loans are placed on non-accrual status with income reported accordingly. Cash payments are first applied as a reduction of the principal balance until collection of the remaining principal and interest can be reasonably assured. Thereafter, interest income is recognized as it is collected in cash.

*Allowance for Loan Losses*

As a financial institution which assumes lending and credit risks as a principal element in its business, the Company anticipates that credit losses will be experienced in the normal course of business. Accordingly, the allowance for loan losses is maintained at a level considered adequate by management to provide for losses that are inherent in the portfolio. The allowance is reduced by charge-offs and increased by provisions charged to operating expense and by recoveries on loans previously charged off. Management employs a systematic methodology for determining the allowance for loan losses. On a quarterly basis, management reviews the credit quality of the loan portfolio and considers many factors in determining the adequacy of the allowance at the balance sheet date.

### Table of Contents

The factors evaluated in connection with the allowance may include existing general economic and business conditions affecting the key lending areas of the Company, current levels of problem loans and delinquencies, credit quality trends, collateral values, loan volumes and concentration, seasoning of the loan portfolio, specific industry conditions, recent loss experience, duration of the current business cycle, bank regulatory examination results and findings of the Company's internal credit examiners.

The allowance also incorporates the results of measuring impaired loans as provided in Statement of Financial Accounting Standards (SFAS) No. 114, "Accounting by Creditors for Impairment of a Loan" and SFAS No. 118, "Accounting by Creditors for Impairment of a Loan-Income Recognition and Disclosures." These accounting standards prescribe the measurement methods, income recognition and disclosures related to impaired loans, which are discussed more fully in Note 4 to the Consolidated Financial Statements in the Company's 2006 Annual Report to Shareholders on Form 10-K.

While the Company utilizes a systematic methodology in determining its allowance, the allowance is based on estimates, and ultimate losses may vary from current estimates. In addition, the Federal Deposit Insurance Corporation and the California Department of Financial Institutions, as an integral part of their examination process, review the allowance for loan losses. These agencies may require additions to the allowance for loan losses based on their judgment about information available at the time of their examinations.

### *Premises and Equipment*

Premises, equipment and leasehold improvements are stated at cost, less accumulated depreciation and amortization. Depreciation is computed principally by the straight-line method over the estimated useful lives of the assets. Estimated useful lives of buildings range from 30 to 40 years, and for furniture and equipment from 3 to 8 years. Leasehold improvements are amortized over the lesser of the terms of the respective leases, or their useful lives, which are generally 5 to 10 years. Remodeling and capital improvements are capitalized while maintenance and repairs are charged directly to occupancy expense.

### *Other Real Estate*

Other real estate, which is included in other assets, is comprised of properties no longer utilized for business operations and property acquired through foreclosure in satisfaction of indebtedness. These properties are recorded at fair value less estimated selling costs upon acquisition. Revised estimates to the fair value less cost to sell are reported as adjustments to the carrying amount of the asset, provided that such adjusted value is not in excess of the carrying amount at acquisition. Initial losses on properties acquired through full or partial satisfaction of debt are treated as credit losses and charged to the Allowance for Loan Losses at the time of acquisition. Subsequent declines in value from the recorded amounts, routine holding costs, and gains or losses upon disposition, if any, are included in non-interest income or expense as incurred.

### *Income Taxes*

The Company uses the liability method of accounting for income taxes. This method results in the recognition of deferred tax assets and liabilities that are reflected at currently enacted income tax rates applicable to the period in which the deferred tax assets or liabilities are expected to be realized or settled. As changes in tax laws or rates are enacted, deferred tax assets and liabilities are adjusted through the provision for income taxes. The deferred provision for income taxes is the result of the net change in the deferred tax asset and deferred tax liability balances during the year. This amount combined with the current taxes payable or refundable results in the income tax expense for the current year.

### *Dividends and Earnings Per Share*

Farmers & Merchants Bancorp common stock is not traded on any exchange. The shares are primarily held by local residents and are not actively traded.

Table of Contents

On May 15, 2007, the Board of Directors of Farmers & Merchants Bancorp declared a mid-year cash dividend of \$4.35 per share, a 16.0% increase over the \$3.75 per share paid in June 2006. The cash dividend was paid on July 1, 2007, to shareholders of record on June 5, 2007.

Earnings per share amounts are computed by dividing net income by the weighted average number of common shares outstanding for the period. The weighted average number of shares outstanding for the three and six month periods ended June 30, 2007 were 811,552 and 811,708. The weighted average number of shares outstanding for the three and six month periods ended June 30, 2006 were 819,077 and 820,667.

*Segment Reporting*

Statement of Financial Accounting Standards No. 131, “*Disclosures about Segments of an Enterprise and Related Information*” requires that public companies report certain information about operating segments. It also requires that public companies report certain information about their products and services, the geographic areas in which they operate, and their major customers. The Company is a holding company for a community bank which offers a wide array of products and services to its customers. Pursuant to its banking strategy, emphasis is placed on building relationships with its customers, as opposed to building specific lines of business. As a result, the Company is not organized around discernable lines of business and prefers to work as an integrated unit to customize solutions for its customers, with business line emphasis and product offerings changing over time as needs and demands change. Therefore, the Company only reports one segment.

*Derivative Instruments and Hedging Activities*

Statement of Financial Accounting Standards, No. 133, “*Accounting for Derivative Instruments and Certain Hedging Activities*” as amended by the Statement of Financial Accounting Standards, No. 138, establishes accounting and reporting standards for derivative instruments, including certain derivative instruments embedded in other contracts, and for hedging activities. All derivatives, whether designated in hedging relationships or not, are required to be recorded on the balance sheet at fair value. Changes in the fair value of those derivatives are accounted for depending on the intended use of the derivative and the resulting designation under specified criteria. If the derivative is designated as a fair value hedge, the changes in the fair value of the derivative and of the hedged item attributable to the hedged risk are recognized in earnings. If the derivative is designated as a cash flow hedge, designed to minimize interest rate risk, the effective portions of the change in the fair value of the derivative are recorded in other comprehensive income (loss), net of related income taxes. Ineffective portions of changes in the fair value of cash flow hedges are recognized in earnings.

The Company utilizes derivative financial instruments such as interest rate caps, floors, swaps and collars. These instruments are purchased and/or sold to reduce the Company’s exposure to changing interest rates. The Company marks to market the value of its derivative financial instruments and reflects gain or loss in earnings in the period of change or in other comprehensive income (loss). The Company was not utilizing any derivative instruments as of June 30, 2007.

*Comprehensive Income*

Statement of Financial Accounting Standards No. 130, “*Reporting Comprehensive Income*” establishes standards for the reporting and display of comprehensive income and its components in the financial statements. Other comprehensive income refers to revenues, expenses, gains and losses that generally accepted accounting principles recognize as changes in value to an enterprise but are excluded from net income. For the Company, comprehensive income (loss) includes net income and changes in fair value of its available-for-sale investment securities, minimum pension liability adjustments and cash flow hedges.

**2. Recent Accounting Pronouncements**

In June 2006, FASB issued Interpretation No. 48, “*Accounting for Uncertainty in Income Taxes – an Interpretation of FASB Statement 109*” (FIN 48). FIN 48 clarifies the accounting for uncertainty in income taxes recognized in a company’s financial statements in accordance with FASB Statement No. 109, “*Accounting for Income Taxes.*” FIN 48 also prescribes a recognition threshold and measurement standard for the financial statement recognition and measurement of an income tax position taken or expected to be taken in a tax return. In addition, FIN 48 provides guidance on derecognition, classification, interest and penalties, accounting in interim periods, disclosure and transition.

Table of Contents

Prior to adopting Fin 48, the Company recognized income tax positions based on management's estimate of whether it was reasonably possible that a liability had been incurred for unrecognized income tax benefits by applying FASB Statement No. 5, "Accounting for Contingencies." The provisions of FIN 48 were effective for the Company on January 1, 2007 and were applied to all tax positions upon initial application of this standard. Only tax positions that met the more-likely-than-not recognition threshold at the effective date were recognized upon adoption. The adoption of FIN 48 did not have a material impact on the Company's financial position or results of operations.

In February 2007, the FASB issued SFAS No. 159, "The Fair Value Option for Financial Assets and Financial Liabilities – Including an amendment of FASB Statement No. 115." This Statement permits entities to choose to measure many financial instruments and certain other items at fair value. Unrealized gains and losses on items for which the fair value option has been elected will be reported in earnings. The objective is to improve financial reporting by providing entities with the opportunity to mitigate volatility in reported earnings caused by measuring related assets and liabilities differently without having to apply complex hedge accounting provisions. This Statement is expected to expand the use of fair value measurement, which is consistent with the FASB's long-term measurement objectives for accounting for financial instruments. SFAS No. 159 is effective for fiscal years beginning after November 15, 2007. Early adoption is permitted as of the beginning of the previous fiscal year provided that the entity makes that choice in the first 120 days of that fiscal year and also elects to apply the provisions of SFAS No. 157, "Fair Value Measurements." The Company has not chosen early adoption of SFAS No. 157. Management is in the process of evaluating the impact the adoption of SFAS No. 159 will have on the Company's financial position and results of operations.

**Item 2. Management's Discussion and Analysis of Financial Condition and Results of Operations**

The following is management's discussion and analysis of the major factors that influenced our financial performance for the three and six months ended June 30, 2007. This analysis should be read in conjunction with our 2006 Annual Report to Shareholders on Form 10-K, and with the unaudited financial statements and notes as set forth in this report.

**Forward-Looking Statements**

This quarterly report contains various forward-looking statements, usually containing the words "estimate," "project," "expect," "objective," "goal," or similar expressions and includes assumptions concerning the Company's operations, future results, and prospects. These forward-looking statements are based upon current expectations and are subject to risk and uncertainties. In connection with the "safe-harbor" provisions of the Private Securities Litigation Reform Act, the Company provides the following cautionary statement identifying important factors which could cause the actual results of events to differ materially from those set forth in or implied by the forward-looking statements and related assumptions.

Such factors include the following: (i) the effect of changing regional and national economic conditions; (ii) significant changes in interest rates and prepayment speeds; (iii) credit risks of commercial, agricultural, real estate, consumer, and other lending activities; (iv) changes in federal and state banking laws or regulations; (v) competitive pressure in the banking industry; (vi) changes in governmental fiscal or monetary policies; (vii) uncertainty regarding the economic outlook resulting from the continuing war on terrorism, as well as actions taken or to be taken by the U.S. or other governments as a result of further acts or threats of terrorism; and (viii) other factors discussed in the Company's filings with the Securities and Exchange Commission.

Readers are cautioned not to place undue reliance on these forward-looking statements which speak only as of the date hereof. The Company undertakes no obligation to update any forward-looking statements to reflect events or circumstances arising after the date on which they are made.

Table of Contents

**Introduction**

Farmers & Merchants Bancorp, or the Company, is a bank holding company formed March 10, 1999. Its subsidiary, Farmers & Merchants Bank of Central California, or the Bank, is a California state-chartered bank formed in 1916. The Bank serves the northern Central Valley of California with 21 banking offices. The service area includes Sacramento, San Joaquin, Stanislaus and Merced Counties with branches in Sacramento, Elk Grove, Galt, Lodi, Stockton, Linden, Modesto, Turlock and Hilmar.

Substantially all of the Company's business activities are conducted within its market area.

As a bank holding company, the Company is subject to regulation and examination by the Board of Governors of the Federal Reserve System ("FRB"). As a California, state-chartered, non-fed member bank, the Bank is subject to regulation and examination by the California Department of Financial Institutions and the Federal Deposit Insurance Corporation.

**Overview**

The Company's primary service area encompasses the northern Central Valley of California, a region that is impacted by the seasonal needs of the agricultural industry. Accordingly, discussion of the Company's Financial Condition and Results of Operations is influenced by the seasonal banking needs of its agricultural customers (e.g., during the spring and summer customers draw down their deposit balances and increase loan borrowing to fund the purchase of equipment and planting of crops. Correspondingly, deposit balances are replenished and loans repaid in fall and winter as crops are harvested and sold).

For the three and six months ended June 30, 2007, Farmers & Merchants Bancorp reported net income of \$5,666,000 and \$11,135,000, earnings per share of \$6.98 and \$13.72, return on average assets of 1.57% and 1.56%, respectively. Return on average shareholders' equity was 16.24% and 16.27% for the three and six months ended June 30, 2007.

For the three and six months ended June 30, 2006, Farmers & Merchants Bancorp reported net income of \$5,094,000 and \$10,031,000, earnings per share of \$6.22 and \$12.22 and return on average assets of 1.51% and 1.50%, respectively. Return on average shareholders' equity was 16.06% and 15.94% for the three and six months ended June 30, 2006.

Factors resulting in the Company's improved earnings performance during the first six months of 2007 as compared to the same period last year were: (1) a \$74.7 million or 6.0% increase in average earning assets which helped offset the negative impact on the Company's net interest margin due to rising deposit costs; (2) an increase of \$962,000 in fee income related primarily to the Company's Overdraft Privilege Service; and (3) an \$869,000 liquidating dividend from the Company's partial ownership position in WSBA, a credit card processing company. Factors (2) and (3) helped offset a \$664,000 increase in loss on investment securities.

The following is a summary of the financial results for the six-month period ended June 30, 2007 compared to June 30, 2006.

- Net income increased 11.0% to \$11.1 million from \$10.0 million.
- Earnings per share increased 12.3% to \$13.72 from \$12.22.
- Total assets increased 7.4% to \$1.5 billion.

- Total loans increased 7.8% to \$1.1 billion.
- Total deposits increased 14.2% to \$1.2 billion.

Table of Contents

- Net interest income decreased 1.4% to \$31.4 million from \$31.8 million.
- Net interest margin on a tax-equivalent basis decreased 37 basis points to 4.92% from 5.29%.

**Results of Operations**

*Net Interest Income / Net Interest Margin*

The tables on the following pages reflect the Company's average balance sheets and volume and rate analysis for the three and six month periods ending June 30, 2007 and 2006.

The average yields on earning assets and average rates paid on interest-bearing liabilities have been computed on an annualized basis for purposes of comparability with full year data. Average balance amounts for assets and liabilities are the computed average of daily balances.

Net interest income is the amount by which the interest and fees on loans and other interest earning assets exceed the interest paid on interest bearing sources of funds. For the purpose of analysis, the interest earned on tax-exempt investments and municipal loans is adjusted to an amount comparable to interest subject to normal income taxes. This adjustment is referred to as "taxable equivalent" and is noted wherever applicable.

The Volume and Rate Analysis of Net Interest Income summarizes the changes in interest income and interest expense based on changes in average asset and liability balances (volume) and changes in average rates (rate). For each category of interest-earning assets and interest-bearing liabilities, information is provided with respect to changes attributable to: (1) changes in volume (change in volume multiplied by initial rate); (2) changes in rate (change in rate multiplied by initial volume); and (3) changes in rate/volume (allocated in proportion to the respective volume and rate components).

The Company's earning assets and rate sensitive liabilities are subject to repricing at different times, which exposes the Company to income fluctuations when interest rates change. In order to minimize income fluctuations, the Company attempts to match asset and liability maturities. However, some maturity mismatch is inherent in the asset and liability mix. (See Item 3. "Quantitative and Qualitative Disclosures about Market Risk: Market Risk – Interest Rate Risk").

Table of Contents

2<sup>nd</sup> Quarter 2007 vs. 2<sup>nd</sup> Quarter 2006

Net interest income for the second quarter of 2007 decreased 0.2% or \$30,000 to \$15.9 million. On a fully taxable equivalent basis, net interest income decreased 0.3% and totaled \$16.3 million for the second quarter of 2007. As more fully discussed below, the decrease in net interest income was primarily due to increasing deposit costs.

Net interest income on a taxable equivalent basis, expressed as a percentage of average total earning assets, is referred to as the net interest margin. For the quarter ended June 30, 2007, the Company's net interest margin was 4.89% compared to 5.21% for the quarter ended June 30, 2006. Recent trends in pricing of both loans and deposits will continue, in management's opinion, to place pressure on the Company's net interest margin in future quarters.

Loans, generally the Company's highest earning assets, increased \$78.3 million as of June 30, 2007 compared to June 30, 2006. See "Financial Condition – Loans" for further discussion on this increase. On an average balance basis, loans increased by \$105.5 million for the quarter ended June 30, 2007. As a result of this loan growth, the mix of the Company's earning assets improved as loans increased from 78.3% of average earning assets during the second quarter of 2006 to 81.6% during the second quarter of 2007. The quarter-to-date yield on the loan portfolio increased 17 basis points to 7.81% for the quarter ended June 30, 2007 compared to 7.63% for the quarter ended June 30, 2006. This increase in yield plus the growth in loan balances resulted in interest revenue from loans increasing 13.3% to \$21.2 million for the quarter ended June 30, 2007. Although the yield on the Company's loans increased over the same quarter in 2006, the Company is currently experiencing aggressive competitor pricing for loans that it may need to respond to in order to retain key customers. This could negatively impact future loan yields.

The investment portfolio is the other main component of the Company's earning assets. Management believes the Company's investment policy is conservative. The Company invests primarily in mortgage-backed securities, U.S. Government Agencies, and high-grade municipals. Since the risk factor for these types of investments is significantly lower than that of loans, the yield earned on investments is generally less than that of loans.

Average investment securities were \$236.1 million for the second quarter of 2007 compared to \$270.6 million for the second quarter of 2006. The average yield, on a taxable equivalent basis (TE), in the investment portfolio was 5.22% for the second quarter of 2007 compared to 4.97% for the second quarter of 2006. The increase in the yield on investment securities was not enough to offset the decrease in volume and resulted in a decrease in interest income of \$281,000, or 8.4%, for the three months ended June 30, 2007. Net interest income on the Schedule of Year-to-Date Average Balances and Interest Rates is shown on a taxable equivalent basis (TE), which is higher than net interest income on the Consolidated Statements of Income because of adjustments that relate to income on certain securities that are exempt from federal income taxes.

Compared to the second quarter of 2006, the Company has grown average interest-bearing sources of funds by \$74.2 million or 7.9%. Interest bearing deposits grew \$165.1 million while all other interest bearing sources of funds (including FHLB Advances) decreased by \$90.9 million (see Deposits and Federal Home Loan Bank Advances and Other Borrowings). Overall, the average interest rate on interest-bearing sources of funds was 3.22% for the three months ended June 30, 2007 and 2.48% for the three months ended June 30, 2006. The increase in the volume and rate on interest-bearing sources of funds resulted in an increase in interest expense of \$2.3 million, or 40.4%, for the three months ended June 30, 2007 over the same period in 2006.

Six Months Ending June 30, 2007 vs. Six Months Ending June 30, 2006

During the first six months of 2007, net interest income decreased 1.4% to \$31.4 million, compared to \$31.8 million at June 30, 2006. On a fully taxable equivalent basis, net interest income decreased 1.4% and totaled \$32.2 million at June 30, 2007, compared to \$32.7 million at June 30, 2006. As more fully discussed below, the decrease in net interest income was primarily due to increasing deposit costs.

Edgar Filing: FARMERS & MERCHANTS BANCORP - Form 10-Q

For the six months ended June 30, 2007, the Company's net interest margin was 4.92% compared to 5.29% for the same period in 2006.

Loans, on an average balance basis, increased by \$92.1 million for the six months ended June 30, 2007 compared to the six months ended June 30, 2006. The yield on the loan portfolio increased 25 basis points to 7.81% for the six months ended June 30, 2007 compared to 7.56% for the six months ended June 30, 2006. This increase in yield and volume resulted in interest revenue from loans increasing 13.0% or \$4.7 million for the first six months of 2007.

18

---

Table of Contents

Average investment securities were \$237.8 million for the six months ended June 30, 2007 compared to \$268.3 million for the same period in 2006. The average yield (TE) for the six months ended June 30, 2007 was 5.21% compared to 4.91% for the six months ended June 30, 2006, partially due to an increase in higher yielding mortgage backed securities. The increase in the yield on investment securities was not enough to offset the decrease in volume and resulted in a decrease in interest income of \$382,000, or 5.8%, for the six months ended June 30, 2007.

Compared to the first six months of 2006, the Company has grown average interest-bearing sources of funds by \$82.3 million or 9.0%. Interest bearing deposits grew \$160.3 million while all other interest bearing sources of funds (including FHLB Advances) decreased by \$78.1 million (see Deposits and Federal Home Loan Bank Advances and Other Borrowings). Overall, the average interest rate on interest-bearing sources of funds was 3.17% for the six months ended June 30, 2007 and 2.31% for the six months ended June 30, 2006. The increase in the volume and rate on interest-bearing sources of funds resulted in an increase in interest expense of \$5.2 million, or 49.1%, for the six months ended June 30, 2007 compared to the same period in 2006.

*Allowance and Provision for Loan Losses*

As a financial institution that assumes lending and credit risks as a principal element of its business, credit losses will be experienced in the normal course of business. The allowance for loan losses is established to absorb losses inherent in the loan portfolio. The allowance for loan losses is maintained at a level considered by management to be adequate to provide for risks inherent in the loan portfolio. The allowance is increased by provisions charged to operating expense and reduced by net charge-offs. In determining the adequacy of the allowance for loan losses, management takes into consideration examinations by the Company's supervisory authorities, results of internal credit reviews, financial condition of borrowers, loan concentrations, prior loan loss experience, and general economic conditions. The allowance is based on estimates and ultimate losses may vary from the current estimates. Management reviews these estimates periodically and, when adjustments are necessary, they are reported in the period in which they become known.

The Company has established credit management policies and procedures that govern both the approval of new loans and the monitoring of the existing portfolio. The Company manages and controls credit risk through comprehensive underwriting and approval standards, dollar limits on loans to one borrower and by restricting loans made primarily to its principal market area where management believes it is better able to assess the applicable risk. Additionally, management has established guidelines to ensure the diversification of the Company's credit portfolio such that even within key portfolio sectors such as real estate or agriculture, the portfolio is diversified across factors such as location, building type, crop type, etc. Management reports regularly to the Board of Directors regarding trends and conditions in the loan portfolio and regularly conducts credit reviews of individual loans. Loans that are performing but have shown some signs of weakness are subjected to more stringent reporting and oversight.

Provision for loan losses for the first half of 2007 was \$250,000 compared to \$275,000 for the first half of 2006. Changes in the provision, and the resulting impact on the allowance for loan losses, between the first half of 2007 and 2006 were the result of management's evaluation of the adequacy of the allowance for loan losses relative to factors such as the credit quality of the loan portfolio, loan growth, current loan losses and the prevailing economic climate and its effect on borrowers' ability to repay loans in accordance with the terms of the notes (see "Note 1. Significant Accounting Policies – Allowance for Loan Losses" and "Item 3. Quantitative and Qualitative Disclosures About Market Risk-Credit Risk").

The allowance for loan losses was \$17.9 million or 1.65% of the total loan balance and \$18.5 million or 1.84% of the total loan balance at June 30, 2007 and June 30, 2006, respectively. As of December 31, 2006, the allowance for loan losses was \$18.1 million, which represented 1.72% of the total loan balance. After reviewing all factors above, management concluded that the allowance for loan losses as of June 30, 2007 was adequate (see "Financial Condition – Loans and Non-Performing Assets" for additional discussion). See the table below for allowance for loan loss activity

for the periods indicated.

Recoveries of Loans Previously Charged Off	53	406	147	664
Loans Charged Off	(433)	(133)	(566)	(268)
<b>Balance at End of Period</b>	<b>\$ 17,930</b>	<b>\$ 18,531</b>	<b>\$ 17,930</b>	<b>\$ 18,531</b>

*Non-Interest Income*

Non-interest income includes: (1) service charges and fees from deposit accounts; (2) net gains and losses from investment securities; (3) credit card merchant fees; (4) ATM fees; (5) increases in the cash surrender value of bank owned life insurance; (6) net investment gains and losses on non-qualified deferred compensation plan balances; and (7) fees from other miscellaneous business services.

2<sup>nd</sup> Quarter 2007 vs. 2<sup>nd</sup> Quarter 2006

Overall, non-interest income increased \$632,000 or 18.1% for the three months ended June 30, 2007 compared to the same period of 2006.

One reason for this increase was fees related to our Overdraft Privilege Service, which was offered to eligible customers with deposit accounts in good standing beginning May 1, 2006. These fees increased approximately \$366,000 for the three months ending June 30, 2007 compared to the same period in 2006.

A second factor affecting non-interest income was an increase of \$415,000 in investment gains on non-qualified deferred compensation plan balances. Gain/loss on these plans fluctuates depending on the type of investments held and market trends in interest rates and stock prices.

The preceding increases in non-interest income were partially offset by a loss on investment securities of \$315,000 for the second quarter of 2007 compared to no loss for the second quarter of 2006. During the first quarter of 2007 the Company recorded a loss on one of its investment securities as a result of an other than temporary impairment in market value (see "Note 1. Significant Accounting Policies" and "Investment Securities"). An additional impairment loss was recorded during the second quarter of 2007 to adjust the same security to its June 30, 2007 market value.

## Six Months Ending June 30, 2007 vs. Six Months Ending June 30, 2006

Non-interest income increased \$1.8 million or 29.2% for the six months ended June 30, 2007 compared to the same period of 2006.

As discussed above, one reason for this increase was fees related to our Overdraft Privilege Service, which increased approximately \$1 million for the six months ended June 30, 2007 compared to the same period of 2006.

Also impacting non-interest income during the first half of 2007 was the receipt of an \$870,000 liquidating dividend from the Company's partial ownership in WSBA, a credit card processing company whose operating assets were sold during 2006 and the company was subsequently liquidated in 2007.

Another factor affecting non-interest income for the six-month period ending June 30, 2007 was an increase of \$444,000 in investment gains on non-qualified deferred compensation plan balances.

The preceding increases were partially offset by impairment losses on investment securities of \$1.1 million through the first six months of 2007 as compared to losses of \$419,000 from sales of available-for-sale investment securities

for the first six months of 2006 (see "Investment Securities").

20

---

Table of Contents

*Non-Interest Expense*

Non-interest expense for the Company includes expenses for salaries and employee benefits, occupancy, equipment, supplies, legal fees, professional services, data processing, marketing, deposit insurance, merchant bankcard operations, and other miscellaneous expenses.

2<sup>nd</sup> Quarter 2007 vs. 2<sup>nd</sup> Quarter 2006

Non-interest expense decreased \$437,000 or 3.8% from the second quarter of 2006, primarily as a result of a \$329,000 decrease in equipment expense related to software and maintenance contracts. The remaining decrease was in marketing expense related to mailings to potential customers.

Six Months Ending June 30, 2007 vs. Six Months Ending June 30, 2006

Non-interest expense for the six months ended June 30, 2007 increased \$50,000 or 0.2% over the same period in 2006. The primary factors affecting non-interest expense were: (1) decreased equipment expense related to software and maintenance contracts; (2) decreased marketing expense related to mailings to potential customers; (3) increased consulting fees related to the Company's Overdraft Privilege Service; and (4) increased legal fees related to expanded SEC disclosure requirements.

*Income Taxes*

The provision for income taxes increased 7.4% to \$3.1 million for the second quarter of 2007. The Company's effective tax rate decreased for the second quarter of 2007 and was 35.7% compared to 36.5% for the same period in 2006.

The provision for income taxes increased 3.8% to \$5.9 million for the first six months of 2007. The Company's effective tax rate decreased for the first six months of 2007 and was 34.8% compared to 36.4% for the same period in 2006.

The Company's effective tax rate can change somewhat from quarter to quarter due primarily to changes in the mix of taxable and tax-exempt earning sources. The effective rates were lower than the statutory rate of 42% due primarily to benefits regarding the cash surrender value of life insurance, California enterprise zone interest income exclusion and tax-exempt interest income on municipal securities and loans.

**Financial Condition**

This section presents a comparison of the Company's balance sheet for the six-month period ending June 30, 2007 and the same period in 2006. As previously discussed (see "Overview") the seasonality of the Company's business due to its agricultural customer base makes a comparison of the June 30<sup>th</sup> balance sheet to the preceding December 31<sup>st</sup> not meaningful.

*Investment Securities*

The Financial Accounting Standards Board Statement, "Accounting for Certain Investments in Debt and Equity Securities", requires the Company to classify its investments as held-to-maturity, trading or available-for-sale. Securities are classified as held-to-maturity and are carried at amortized cost when the Company has the positive intent and ability to hold the securities to maturity. Trading securities are securities acquired for short-term appreciation and are carried at fair value, with unrealized gains and losses recorded in non-interest income. Securities classified as available-for-sale include securities, which may be sold to effectively manage interest rate risk exposure, prepayment risk, satisfy liquidity demand and other factors. These securities are reported at fair value with aggregate, unrealized gains or losses excluded from income and included as a separate component of shareholders' equity, net of related income taxes. Investment securities are evaluated for impairment on at least a quarterly basis to determine whether a decline in their value is other than temporary. During the first half of 2007 the Company recorded an

impairment loss on one of its investment securities (see “Non-Interest Income”).

The investment portfolio provides the Company with an income alternative to loans as well as a tool to better manage its liquidity and interest rate risk. As of June 30, 2007 the investment portfolio represented 16.8% of the Company's total assets. Total investment securities decreased \$17.0 million from a year ago and now total \$248.8 million. Cash flows generated from reductions in the investment portfolio were used to fund higher yielding loans.

Table of Contents

Not included in the investment portfolio are overnight investments in Federal Funds Sold. For the six months ended June 30, 2007, average Federal Funds Sold was \$14.7 million compared to \$1.6 million at June 30, 2006.

Loans

The Company's loan portfolio at June 30, 2007 increased \$78.3 million from June 30, 2006. The increase was due to strong loan demand in the Company's market area, along with a focused calling program on selected loan prospects. Most of the year-over-year growth occurred in Agricultural Loans and Real Estate Loans (primarily those secured by production agricultural properties), market segments where the Company believes that current market rates are more reasonable than in the areas of Commercial, Consumer, Home Equity and Other Real Estate loans. Additionally, on an average balance basis loans have increased \$92.1 million or 9.4% from prior year. Although the Company has continued to experience strong loan demand, aggressive competitor pricing could place pressures on future yields (see "Net Interest Income/Net Interest Margin"). The following table sets forth the distribution of the loan portfolio by type as of the dates indicated.

**Loan Portfolio:**

<b>(in thousands)</b>	<b>June 30, 2007</b>	<b>Dec. 31, 2006</b>	<b>June 30, 2006</b>
Real Estate	\$ 541,651	\$ 516,606	\$ 473,542
Real Estate Construction	73,634	95,378	92,618
Home Equity	66,641	67,132	66,402
Agricultural	207,357	183,589	176,621
Commercial	178,525	165,412	179,808
Consumer	20,138	21,222	20,514
Gross Loans	1,087,946	1,049,339	1,009,505
Less:			
Unearned Income	2,507	2,427	2,400
Allowance for Loan Losses	17,930	18,099	18,531
<b>Net Loans</b>	<b>\$ 1,067,509</b>	<b>\$ 1,028,813</b>	<b>\$ 988,574</b>

Non-Performing Assets

Non-performing assets are comprised of non-performing loans (defined as non-accrual loans plus accruing loans past due 90 days or more) and other real estate owned. As set forth in the table below, non-performing loans as of June 30, 2007 were \$639,000 compared to \$127,000 at June 30, 2006. Accrued interest reversed from income on loans placed on a non-accrual status totaled \$57,000 for the six months ended June 30, 2007 compared to \$15,000 for the six months ended June 30, 2006. The Company has reported no other real estate owned from June 30, 2006 through June 30, 2007.

**Non-Performing Assets**

<b>(in thousands)</b>	<b>June 30, 2007</b>	<b>Dec. 31, 2006</b>	<b>June 30, 2006</b>
Non-Performing Loans	\$ 639	\$ 54	\$ 127
Other Real Estate Owned	-	-	-
Total	\$ 639	\$ 54	\$ 127
Non-Performing Assets as a % of Gross Loans	0.06%	0.01%	0.01%
Allowance for Loan Losses as a % of Non-Performing Loans	2,805.9%	33,516.7%	14,591.3%

Table of Contents

Except for non-performing loans shown in the table above, the Bank's management is not aware of any loans as of June 30, 2007 for which known credit problems of the borrower would cause serious doubts as to the ability of these borrowers to comply with their present loan repayment terms, or any known events that would result in the loan being designated as non-performing at some future date. The Company's management cannot, however, predict the extent to which the following or other factors may affect a borrower's ability to pay: (1) deterioration in general economic conditions, real estate values or agricultural commodity prices; (2) increases in interest rates; or (3) changes in the overall financial condition or business of a borrower.

*Deposits*

One of the key sources of funds to support earning assets (loans and investments) is the generation of deposits from the Company's customer base. The ability to grow the customer base and subsequently deposits is a significant element in the performance of the Company.

At June 30, 2007, deposits totaled \$1.2 billion. This represents an increase of 14.2% or \$154.7 million from June 30, 2006. Core deposits (exclusive of Public Time Deposits) increased 9.0% over the same period. Public Time Deposits have increased \$63.0 million since June 30, 2006 primarily because of the Company's decision to increase its use of State of California time deposits for short-term funding needs instead of using FHLB Advances (see "Federal Home Loan Bank Advances and Other Borrowings").

Due to the rising interest rate environment, the primary area of deposit growth was in time deposits, which grew \$136.8 million or 32.5% from June 30, 2006. However, as a result of a focused calling program on selected deposit prospects, the Company has also experienced growth in Demand, Interest Bearing Transaction and Savings deposits in the amount of \$17.8 million since June 30, 2006. The Company continues to experience aggressive competitor pricing for deposits which may impact future fund costs (see "Net Interest Income/Net Interest Margin").

*Federal Home Loan Bank Advances and Other Borrowings*

Advances from the Federal Home Loan Bank are another key source of funds to support earning assets (see "Item 3. Quantitative and Qualitative Disclosures about Market Risk and Liquidity Risk"). These advances are also used to manage the Company's interest rate risk exposure, and as opportunities exist, to borrow and invest the proceeds at a positive spread through the investment portfolio. FHLB Advances as of June 30, 2007 were \$63.9 million compared to \$134.6 million as of June 30, 2006. See "Deposits" for a discussion of the Company's use of Public Deposits from the State of California to replace FHLB Advances.

*Long-Term Subordinated Debentures*

On December 17, 2003 the Company raised \$10 million through an offering of trust-preferred securities. Although this amount is reflected as subordinated debt on the Company's balance sheet, under applicable regulatory guidelines, trust preferred securities qualify as regulatory capital (see "Capital"). These securities accrue interest at a variable rate based upon 3-month Libor plus 2.85%. Interest rates reset quarterly and were 8.21% as of June 30, 2007, 8.21% at December 31, 2006 and 8.25% at June 30, 2006.

*Capital*

The Company relies primarily on capital generated through the retention of earnings to satisfy its capital requirements. The Company engages in an ongoing assessment of its capital needs in order to support business growth and to insure depositor protection. Shareholders' Equity totaled \$138.1 million at June 30, 2007 and \$125.7 million at June 30, 2006.

The Company and the Bank are subject to capital adequacy requirements administered by the federal banking agencies. Under these requirements and the regulatory framework for prompt corrective action, the Company and the Bank must meet specific capital guidelines that involve quantitative measures of the Company's and the Bank's assets,

liabilities, and certain off-balance-sheet items as calculated under regulatory accounting practices. The Company's and the Bank's capital amounts and classification are also subject to qualitative judgments by the regulators about components, risk weightings, and other factors. Failure to meet minimum capital requirements can initiate certain mandatory, and possibly discretionary, actions by regulators that, if undertaken, could have a direct material effect on the Company's and the Bank's financial statements. Management believes, as of June 30, 2007, that the Company and the Bank meet all capital adequacy requirements to which they are subject.

Table of Contents

In its most recent notification from the Federal Deposit Insurance Corporation the Bank was categorized as “well capitalized” under the regulatory framework for prompt corrective action. To be categorized as “well capitalized”, the Bank must maintain minimum Total risk-based, Tier 1 risk-based, Tier 1 leverage ratios as set forth in the table below. There are no conditions or events since that notification that management believes have changed the institution’s categories.

(in thousands) The Company:	Actual		Regulatory Capital Requirements		To Be Well Capitalized Under Prompt Corrective Action Provisions	
	Amount	Ratio	Amount	Ratio	Amount	Ratio
As of June 30, 2007						
Total Capital to Risk Weighted Assets	\$ 166,901	12.40%	\$ 107,716	8.0%	N/A	N/A
Tier I Capital to Risk Weighted Assets	150,055	11.14%	53,858	4.0%	N/A	N/A
Tier I Capital to Average Assets	150,055	10.48%	57,290	4.0%	N/A	N/A

(in thousands) The Bank:	Actual		Regulatory Capital Requirements		To Be Well Capitalized Under Prompt Corrective Action Provisions	
	Amount	Ratio	Amount	Ratio	Amount	Ratio
As of June 30, 2007						
Total Capital to Risk Weighted Assets	\$ 160,204	11.96%	\$ 107,159	8.0%	\$ 133,919	10.0%
Tier I Capital to Risk Weighted Assets	143,444	10.71%	53,580	4.0%	80,369	6.0%
Tier I Capital to Average Assets	143,444	10.05%	57,094	4.0%	71,368	5.0%

As previously discussed (see Long-term Subordinated Debentures), in order to supplement its regulatory capital base, during December 2003 the Company issued \$10 million of trust preferred securities. On March 1, 2005 the Federal Reserve Board issued its final rule effective April 11, 2005, concerning the regulatory capital treatment of trust preferred securities (“TPS”) by bank holding companies (“BHCs”). Under the final rule BHCs may include TPS in Tier 1 capital in an amount equal to 25% of the sum of core capital net of goodwill. The quantitative limitation concerning goodwill will not be effective until March 31, 2009. Any portion of trust-preferred securities not qualifying as Tier 1 capital would qualify as Tier 2 capital subject to certain limitations. The Company has received notification from the Federal Reserve Bank of San Francisco that all of the Company’s trust preferred securities currently qualify as Tier 1 capital.

In accordance with the provisions of Financial Accounting Standard Board Interpretation No. 46, “*Consolidation of Variable Interest Entities*” (“FIN 46”), the Company does not consolidate the subsidiary trust which has issued the trust-preferred securities.

In 1998, the Board approved the Company’s first stock repurchase program which expired on May 1, 2001. During the second quarter of 2004, the Board approved a second stock repurchase program because it concluded that the Company continued to have more capital than it needed to meet present and anticipated regulatory guidelines for the

Bank to be classified as “well capitalized.” On April 4, 2006, the Board unanimously approved expanding the repurchase program to allow the repurchase of up to \$15 million of stock between May 1, 2006 and April 30, 2009.

Repurchases under the program will continue to be made on the open market or through private transactions. The repurchase program also requires that no purchases may be made if the Bank would not remain “well-capitalized” after the repurchase. All shares repurchased under the repurchase program will be retired (see the Company’s 2006 Form 10-K, Part II, Item 5. Market for Registrant’s Common Equity, Related Stockholder Matters and Issuer Purchases of Equity Securities).

Table of Contents

During the second quarter of 2007, the Company repurchased 1,000 shares at an average share price of \$510 per share. During the second quarter of 2006, the Company repurchased 4,041 shares at an average share price of \$508. Since the second share repurchase program was expanded in 2006, the Company has repurchased over 9,400 shares for total consideration of \$4.8 million.

*Critical Accounting Policies and Estimates*

This “Management’s Discussion and Analysis of Financial Condition and Results of Operations,” is based upon the Company’s consolidated financial statements, which have been prepared in accordance with accounting principles generally accepted in the United States. In preparing the Company’s financial statements management makes estimates and judgments that affect the reported amounts of assets, liabilities, revenues and expenses. These judgments govern areas such as the allowance for loan losses, the fair value of financial instruments, accounting for income taxes and pension accounting.

For a full discussion of the Company’s critical accounting policies and estimates see “Management’s Discussion and Analysis” in the Company’s Annual Report to Shareholders for the year ended December 31, 2006.

*Off Balance Sheet Arrangements*

Off-balance sheet arrangements are any contractual arrangement to which an unconsolidated entity is a party, under which the Company has: (1) any obligation under a guarantee contract; (2) a retained or contingent interest in assets transferred to an unconsolidated entity or similar arrangement that serves as credit, liquidity or market risk support to that entity for such assets; (3) any obligation under certain derivative instruments; or (4) any obligation under a material variable interest held by the Company in an unconsolidated entity that provides financing, liquidity, market risk or credit risk support to the Company, or engages in leasing, hedging or research and development services with the Company.

In the ordinary course of business, the Company enters into commitments to extend credit to its customers. As of June 30, 2007, the Company had entered into commitments with certain customers amounting to \$382.9 million compared to \$442.5 million at December 31, 2006 and \$319.9 million at June 30, 2006. Letters of credit at June 30, 2007, December 31, 2006 and June 30, 2006, were \$11.0 million, \$10.9 million and \$9.1 million, respectively. These commitments are not reflected in the accompanying consolidated financial statements and do not significantly impact operating results.

**ITEM 3. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK**

**Risk Management**

The Company has adopted a Risk Management Plan, which aims to ensure the proper control and management of all risk factors inherent in the operation of the Company. Specifically, credit risk, interest rate risk, liquidity risk, compliance risk, strategic risk, reputation risk and price risk can all affect the market risk of the Company. These specific risk factors are not mutually exclusive. It is recognized that any product or service offered by the Company may expose the Company to one or more of these risk factors.

**Credit Risk**

Credit risk is the risk to earnings or capital arising from an obligor’s failure to meet the terms of any contract or otherwise fail to perform as agreed. Credit risk is found in all activities where success depends on counterparty, issuer or borrower performance.

Credit risk in the investment portfolio and correspondent bank accounts is addressed through defined limits in the Company’s policy statements. In addition, certain securities carry insurance to enhance credit quality of the bond.

Credit risk in the loan portfolio is controlled by limits on industry concentration, aggregate customer borrowings and geographic boundaries. Standards on loan quality also are designed to reduce loan credit risk. Senior Management, Directors' Committees, and the Board of Directors are regularly provided with information intended to identify, measure, control and monitor the credit risk of the Company.

Table of Contents

The Company's methodology for assessing the appropriateness of the allowance is applied on a regular basis and considers all loans. The systematic methodology consists of two major elements. The first major element includes a detailed analysis of the loan portfolio in two phases. The first phase is conducted in accordance with SFAS No. 114, "Accounting by Creditors for the Impairment of a Loan" as amended by SFAS No. 118, "Accounting by Creditors for Impairment of a Loan — Income Recognition and Disclosures." Individual loans are reviewed to identify loans for impairment. A loan is impaired when principal and interest are deemed uncollectible in accordance with the original contractual terms of the loan. Impairment is measured as either the expected future cash flows discounted at each loan's effective interest rate, the fair value of the loan's collateral if the loan is collateral dependent, or an observable market price of the loan (if one exists). Upon measuring the impairment, the Company will ensure an appropriate level of allowance is present or established.

Central to the first phase and the Company's credit risk management is its loan risk rating system. The originating credit officer assigns borrowers an initial risk rating, which is based primarily on a thorough analysis of each borrower's financial position in conjunction with industry and economic trends. Approvals are made based upon the amount of inherent credit risk specific to the transaction and are reviewed for appropriateness by senior credit administration personnel. Credits are monitored by credit administration personnel for deterioration in a borrower's financial condition, which would impact the ability of the borrower to perform under the contract. Risk ratings are adjusted as necessary.

Based on the risk rating system, specific allowances are established in cases where management has identified significant conditions or circumstances related to a credit that management believes indicates the possibility of loss. Management performs a detailed analysis of these loans, including, but not limited to, cash flows, appraisals of the collateral, conditions of the marketplace for liquidating the collateral and assessment of the guarantors. Management then determines the inherent loss potential and allocates a portion of the allowance for losses as a specific allowance for each of these credits.

The second phase is conducted by segmenting the loan portfolio by risk rating and into groups of loans with similar characteristics in accordance with SFAS No. 5, "Accounting for Contingencies." In this second phase, groups of loans are reviewed and applied the appropriate allowance percentage to determine a portfolio formula allowance.

The second major element of the analysis, which considers all known relevant internal and external factors that may affect a loan's collectibility, is based upon management's evaluation of various conditions, the effects of which are not directly measured in the determination of the formula and specific allowances. The evaluation of the inherent loss with respect to these conditions is subject to a higher degree of uncertainty because they are not identified with specific problem credits or portfolio segments. The conditions evaluated in connection with the second element of the analysis of the allowance include, but are not limited to the following conditions that existed as of the balance sheet date:

- § then-existing general economic and business conditions affecting the key lending areas of the Company;
- § credit quality trends (including trends in non-performing loans expected to result from existing conditions);
  - § collateral values;
  - § loan volumes and concentrations;
  - § seasoning of the loan portfolio;
- § specific industry conditions within portfolio segments;
  - § recent loss experience within portfolio segments;
  - § duration of the current business cycle;
  - § bank regulatory examination results; and
- § findings of the Company's internal credit examiners.

Management reviews these conditions in discussion with the Company's senior credit officers. To the extent that any of these conditions is evidenced by a specifically identifiable problem credit or portfolio segment as of the evaluation date, management's estimate of the effect of such condition may be reflected as a specific allowance applicable to such credit or portfolio segment. Where any of these conditions is not evidenced by a specifically identifiable problem credit or portfolio segment as of the evaluation date, management's evaluation of the inherent loss related to such condition is reflected in the second major element of the allowance.

Table of Contents

Implicit in lending activities is the risk that losses will and do occur and that the amount of such losses will vary over time. Consequently, the Company maintains an allowance for loan losses by charging a provision for loan losses to earnings. Loans determined to be losses are charged against the allowance for loan losses. The Company's allowance for loan losses is maintained at a level considered by management to be adequate to provide for estimated losses inherent in the existing portfolio.

Management believes that the allowance for loan losses at June 30, 2007 was adequate to provide for both recognized losses and estimated inherent losses in the portfolio. No assurances can be given that future events may not result in increases in delinquencies, non-performing loans or net loan charge-offs that would increase the provision for loan losses and thereby adversely affect the results of operations.

**Market Risk - Interest Rate Risk**

The mismatch between maturities of interest sensitive assets and liabilities results in uncertainty in the Company's earnings and economic value and is referred to as interest rate risk. The Company does not attempt to predict interest rates and positions the balance sheet in a manner, which seeks to minimize, to the extent possible, the effects of changing interest rates.

The Company measures interest rate risk in terms of potential impact on both its economic value and earnings. The methods for governing the amount of interest rate risk include: analysis of asset and liability mismatches (GAP analysis), the utilization of a simulation model and limits on maturities of investment, loan and deposit products which reduces the market volatility of those instruments.

The Gap analysis measures, at specific time intervals, the divergence between earning assets and interest bearing liabilities for which repricing opportunities will occur. A positive difference, or Gap, indicates that earning assets will reprice faster than interest-bearing liabilities. This will generally produce a greater net interest margin during periods of rising interest rates and a lower net interest margin during periods of declining interest rates. Conversely, a negative Gap will generally produce a lower net interest margin during periods of rising interest rates and a greater net interest margin during periods of decreasing interest rates.

The interest rates paid on deposit accounts do not always move in unison with the rates charged on loans. In addition, the magnitude of changes in the rates charged on loans is not always proportionate to the magnitude of changes in the rate paid for deposits. Consequently, changes in interest rates do not necessarily result in an increase or decrease in the net interest margin solely as a result of the differences between repricing opportunities of earning assets or interest bearing liabilities.

The Company also utilizes the results of a dynamic simulation model to quantify the estimated exposure of net interest income to sustained interest rate changes. The sensitivity of the Company's net interest income is measured over a rolling one-year horizon.

The simulation model estimates the impact of changing interest rates on interest income from all interest earning assets and the interest expense paid on all interest bearing liabilities reflected on the Company's balance sheet. This sensitivity analysis is compared to policy limits, which specify a maximum tolerance level for net interest income exposure over a one-year horizon assuming no balance sheet growth, given a 200 basis point upward and a 200 basis point downward shift in interest rates. A shift in rates over a 12-month period is assumed. Results that exceed policy limits, if any, are analyzed for risk tolerance and reported to the Board with appropriate recommendations. At June 30, 2007, the Company's estimated net interest income sensitivity to changes in interest rates, as a percent of net interest income was an increase in net interest income of 0.26% if rates increase by 200 basis points and a decrease in net interest income of 1.14% if rates decline 200 basis points. Comparatively, at December 31, 2006, the Company's estimated net interest income sensitivity was an increase in net interest income of 0.92% if rates increase by 200 basis

points and a decrease in net interest income of 2.43% if rates decrease 200 basis points.

The estimated sensitivity does not necessarily represent a Company forecast and the results may not be indicative of actual changes to the Company's net interest income. These estimates are based upon a number of assumptions including: the nature and timing of interest rate levels including yield curve shape; prepayments on loans and securities; pricing strategies on loans and deposits; replacement of asset and liability cashflows; and other assumptions. While the assumptions used are based on current economic and local market conditions, there is no assurance as to the predictive nature of these conditions including how customer preferences or competitor influences might change.

Table of Contents

Liquidity Risk

Liquidity risk is the risk to earnings or capital resulting from the Company's inability to meet its obligations when they come due without incurring unacceptable losses. It includes the ability to manage unplanned decreases or changes in funding sources and to recognize or address changes in market conditions that affect the Company's ability to liquidate assets or acquire funds quickly and with minimum loss of value. The Company endeavors to maintain a cash flow adequate to fund operations, handle fluctuations in deposit levels, respond to the credit needs of borrowers and to take advantage of investment opportunities as they arise. The principal sources of liquidity include credit facilities from correspondent banks, brokerage firms and the Federal Home Loan Bank, as well as interest and principal payments on loans and investments, proceeds from the maturity or sale of investments, and growth in deposits.

In general, liquidity risk is managed by controlling the level of borrowings and the use of funds provided by the cash flow from the investment portfolio. At June 30, 2007, the Company maintained Federal Funds borrowing lines of \$75 million with banks subject to the customary terms and conditions for such arrangements and \$150 million in repurchase lines with major brokers. In addition, the Company has additional borrowing capacity of \$163.2 million from the Federal Home Loan Bank.

At June 30, 2007, the Company had available sources of liquidity, which included cash and cash equivalents and unpledged investment securities of approximately \$63.6 million, which represents 4.3% of total assets.

**ITEM 4. CONTROLS AND PROCEDURES**

The Company maintains disclosure controls and procedures designed to ensure that information is recorded and reported in all filings of financial reports. Such information is reported to the Company's management, including its Chief Executive Officer and its Chief Financial Officer to allow timely and accurate disclosure based on the definition of "disclosure controls and procedures" in Rule 13a-15(e). In designing these controls and procedures, management recognizes that they can only provide reasonable assurance of achieving the desired control objectives. Management also evaluates the cost-benefit relationship of possible controls and procedures.

As of the end of the period covered by this report, the Company carried out an evaluation of the effectiveness of Company's disclosure controls and procedures under the supervision and with the participation of the Chief Executive Officer, the Chief Financial Officer and other senior management of the Company. The evaluation was based, in part, upon reports and affidavits provided by a number of executives. Based on the foregoing, the Company's Chief Executive Officer and the Chief Financial Officer concluded that the Company's disclosure controls and procedures were effective.

There have been no significant changes in the Company's internal controls over financial reporting or in other factors that could significantly affect the internal controls over financial reporting during the second quarter of 2007.

**PART II. OTHER INFORMATION**

**ITEM 1. Legal Proceedings**

Certain lawsuits and claims arising in the ordinary course of business have been filed or are pending against the Company or its subsidiaries. Based upon information available to the Company, its review of such lawsuits and claims and consultation with its counsel, the Company believes the liability relating to these actions, if any, would not have a material adverse effect on its consolidated financial statements.

There are no material proceedings adverse to the Company to which any director, officer or affiliate of the Company is a party.

Table of Contents**ITEM 1A. Risk Factors**

See Item 1A. Risk Factors in the Company's 2006 Form 10-K. In management's opinion there have been no material changes in risk factors since the filing of the 2006 Form 10-K.

**ITEM 2. Unregistered Sales of Equity Securities and Use of Proceeds**

The following table indicates the number of shares repurchased by Farmers & Merchants Bancorp during the second quarter of 2007.

<b>Second Quarter 2007</b>	<b>Number of Shares</b>	<b>Average Price per Share</b>	<b>Number of Shares Purchased as Part of a Publicly Announced Plan or Program</b>	<b>Approximate Dollar Value of Shares that May Yet Be Purchased Under the Plan or Program</b>
04/01/2007 - 04/30/2007	-	-	-	\$10,718,880
05/01/2007 - 05/31/2007	-	-	-	10,718,880
06/01/2007 - 06/30/2007	1,000	\$510	1,000	10,208,880
<b>Total</b>	<b>1,000</b>	<b>\$510</b>	<b>1,000</b>	<b>\$10,208,880</b>

The common stock of Farmers & Merchants Bancorp is not widely held or listed on any exchange. However, trades may be reported on the OTC Bulletin Board under the symbol "FMCB.OB." Additionally, management is aware that there are private transactions in the Company's common stock.
