Currency in the News

An Overview of Currency

The currency market is the world s largest and most liquid market, with average daily turnover of roughly \$4 trillion*

Many hedge funds and institutions have used currency investing as a means of hedging certain portfolio exposures against currency risks and opportunistically trading across currencies

Many foreign currencies have historically shown a low correlation to U.S. equity and fixed-income markets

Currency investing offers a variety of trading strategies

Correlation

(7/1/2006 through 6/30/2011)

Correlation

Many currencies have historically offered a low correlation to other asset classes like stocks and bonds, which in turn helps lower portfolio risk and boost overall returns.

With Currency Potential Impact of Adding Currency to A Portfolio

A Convenient Way to Access Currencies: CurrencyShares

For many years, hedge funds and institutions have used currencies as a way of hedging the dollar through seeking currency exposure through the

market, which could be challenging for advisors and individuals to utilize. Now, advisors and investors have a potentially efficient way of hedging dollar exposure, and taking advantage of investment opportunities in the currency markets.

Rydex CurrencyShares

®

offer a convenient, cost-effective way to gain exposure to ten currencies.

Potential

CurrencyShares®

Uses

Provide an efficient means of gaining exposure to a currency

Can be used as a tool for currency hedging

Can be used as part of a tactical trading strategy, individually and collectively

Currency trading is used by hedge funds and institutions to hedge foreign exchange, and to take positions, long and short, in currencies based on expectations

Investors can be long the highest-yielding currency, and short the lowest-yielding

currency (i.e., the carry-trade)

The Role of Currencies

Diversifying

Cash

Just as investors diversify their international stock and bond portfolios to reduce risk, investors can also diversify their cash allocations.

Benefits of Currency in an ETP Format

Accessibility

Access the currency markets through a traditional brokerage account. Shares are bought and sold on the NYSE Arca

just like other exchange listed securities.

Actual

Currency

Holdings

The foreign currencies are deposited in segregated depository accounts at J.P. Morgan Chase Bank N.A. (London).

Exchange-

Traded

CurrencyShares are bought and sold on the NYSE Arca, providing an efficient means of incorporating tactical strategies or hedging exposures. CurrencyShares are eligible for margin. Liquidity

CurrencyShares are liquid. They can be purchased in the secondary market. Shares of each Trust can be created or redeemed in baskets of 50,000 units by Authorized Participants (APs). Choice

With nine different products covering the world s major currencies, investors can easily customize their trades to meet their investment objectives.

Transparency

CurrencyShares®

are grantor trusts, and they hold actual foreign currency deposits as their sole asset as opposed to money market debt instruments or derivatives contracts. The assets of each Trust back the shares. The Trust does not hold or employ derivatives.

excess of the amount required to cover Trust expenses is distributed on a pro-rata basis to shareholders

All accounting takes place in native currency to nullify the FX impact

CurrencyShares

Partial year returns are cumulative, not annualized. Performance results are short-term and may not provide an adequate basis for evaluating the performance potential of the fund over varying market conditions or economic cycles.

Performance displayed represents past performance, which is no guarantee of future results. Investment returns and principal value will fluctuate so that when

shares are redeemed, they may be worth more or less than original cost. Total returns reflect the reinvestment of all dividends. Current performance may be lower or higher than the performance data quoted. For upto-date performance, including performance current to the most recent month-end, visit our web site at www.currencyshares.com. The NAV and Market Close Performance may differ. A major reason for the difference is that timing discrepancies can exist between the NAV, which is calculated using the WM/Reuters Closing Spot Rate, and Market Close, which is calculated using Closing Price (last trade). The WM/Reuters Closing Spot Rate is the exchange rate of the U.S. dollar and the applicable foreign currency as determined by WM/Reuters as of 4:00 PM London Time. Prior to 11/13/2008 NAV for each CurrencyShares Trust except the CurrecyShares Russian Ruble Trust, was calculated using the Noon Buying Rate, as determined by the Federal Reserve Bank of New York. For additional information please see each trust's prospectus. Performance (as of 6/30/2011)

Currency Shares ®

are subject to a number of risks and may not be suitable for all investors.

The value of the shares of each CurrencyShares Trust relates directly to the value of the foreign currency held by the particular Trust. This creates a concentration risk associated with fluctuations in the price of the applicable foreign currency. Accordingly, a decline in the price of that currency will have an adverse effect on the value of the shares of the particular CurrencyShares Trust. Factors that may have the effect of causing a decline in the price of a foreign currency include national debt levels and trade deficits, domestic and foreign interest rates, investment and trading activities of institutions and global or regional political, economic or financial events and situations.

Shares of each CurrencyShares Trust can be bought and sold through a broker; as such, investors may be required to pay brokerage commissions in connection with a purchase or sale.

There can be no assurance that an active trading market for the shares will develop or be maintained.

The risks associated with each of the CurrencyShares Trusts are not identical because of differences in the economies

underlying each CurrencyShares Trust, as well as other considerations. Read the prospectus for more complete information on each risk. CurrencyShares

of correlation ranges from positive one (1) to negative one (-1). For example: If the value of two assets always moves in the same direction, they are said to be "highly correlated," and they have a correlation positive one (1). If their values always move in opposite directions, they are said to have "negative correlation" or "inverse correlation," and have correlation of negative one (-1). If there is no consistent mathematical relationship between the value of the two assets, then the correlation coefficient is 0.
