**Lynx Therapeutics, Inc.**  
**NOTES TO UNAUDITED CONDENSED CONSOLIDATED FINANCIAL STATEMENTS**

**September 30, 2003**

**1. Nature of Business**

We believe that Lynx Therapeutics, Inc. ( Lynx or the Company ) is a leader in the development and application of novel genomics analysis solutions that provide comprehensive and quantitative digital gene expression information important to modern systems biology research in the pharmaceutical, biotechnology and agricultural industries. These solutions are based on Megaclone and Massively Parallel Signature Sequencing, or MPSS , Lynx 's unique and proprietary cloning and sequencing technologies. Gene expression refers to the number of genes and the extent a cell or tissue expresses those genes, and represents a way to move beyond DNA sequence data to understand the function of genes, the proteins that they encode and the role they play in health and disease. Systems biology is an approach in which researchers seek to gain a complete molecular understanding of biological systems in health and disease.

**2. Basis of Presentation**

In January 2003, we received stockholder approval for, and effected, a reverse stock split of our common stock at a ratio of 1-for-7 (the reverse stock split ). As a result of the reverse stock split, each outstanding share of common stock automatically converted into one-seventh of a share of common stock, with the par value of each share of common stock remaining at one cent (\$.01) per share. Accordingly, common stock share and per share amounts for all periods presented have been adjusted to reflect the impact of the reverse stock split.

The accompanying unaudited condensed consolidated financial statements included herein have been prepared by Lynx without audit, pursuant to the rules and regulations promulgated by the Securities and Exchange Commission (the SEC ). Certain prior year amounts have been reclassified to conform to current year presentation. Certain information and footnote disclosures normally included in financial statements prepared in accordance with generally accepted accounting principles have been omitted pursuant to SEC rules and regulations; nevertheless, Lynx believes that the disclosures are adequate to make the information presented not misleading. In the opinion of management, the financial statements contain all adjustments, consisting only of normal recurring adjustments, necessary to present fairly the financial position, results of operations and cash flows of the Company for the interim periods presented. The results of operations for the nine months ended September 30, 2003 are not necessarily indicative of the results for the full year.

Our unaudited condensed consolidated financial statements have been presented on a basis that contemplates the realization of assets and satisfaction of liabilities in the normal course of business. We have experienced losses since our inception, including a net loss of \$5.0 million for the nine months ended September 30, 2003. Net losses may continue for at least the next several years as we proceed with the commercialization and additional development of our technologies. The size of these losses will depend on the rate of growth, if any, in our revenues and on the level of our expenses. Our cash and cash equivalents have decreased from the \$11.7 million as of December 31, 2002. As of September 30, 2003, our cash and cash equivalents consisted of \$5.4 million in unrestricted cash and restricted cash of \$0.9 million. We will require additional funding to continue our business activities in 2004, and believe that sufficient funding will be available to meet our projected operating and capital requirements through at least December 31, 2004. We are considering various options, which include securing additional equity financing and obtaining new collaborators and customers. If we raise additional capital by issuing equity or convertible debt securities, our existing stockholders may experience substantial dilution. There can be no assurance that additional financing will be available on satisfactory terms, or at all. If we are unable to secure additional financing on reasonable terms, or are unable to generate sufficient new sources of revenue through arrangements with customers, collaborators and licensees, we will be forced to take substantial restructuring actions, which may include significantly reducing our anticipated level of expenditures, the sale of some or all of our assets, or obtaining funds by entering into financing or collaborative agreements on unattractive terms, or we will not be able to fund operations.

## **Table of Contents**

The unaudited condensed consolidated financial statements include all accounts of Lynx and our wholly owned subsidiary, Lynx Therapeutics GmbH, formed under the laws of the Federal Republic of Germany. All significant intercompany balances and transactions have been eliminated. Certain amounts in prior periods have been reclassified to conform to the current year presentation.

These financial statements should be read in conjunction with Lynx's audited consolidated financial statements and notes thereto for the year ended December 31, 2002, included in Lynx's annual report on Form 10-K, as amended, filed with the SEC.

### **3. Summary of Significant Accounting Policies**

#### **Revenue Recognition**

Technology access fees have generally resulted from upfront payments from collaborators, customers and licensees who are provided access to our technologies for specified periods. We receive service fees from collaborators and customers for genomics discovery services performed by us on the biological samples they send to us. Collaborative research revenues are payments received under various agreements and include such items as milestone payments. Milestone payments are recognized as revenue pursuant to collaborative agreements upon the achievement of specified technology developments, representing the culmination of the earnings process. Other revenues include the proceeds from the sale of technology assets, the sale of proprietary instruments and reagents, and grant revenue.

Technology access and license fees are deferred and recognized as revenue on a straight-line basis over the noncancelable term of the agreement to which they relate. Payments for services and/or materials provided by Lynx are recognized as revenues when earned over the period in which the services are performed and/or materials are delivered, provided that no other consequential obligations, refunds or credits to be applied to future work exist. Revenues from the sale of technology assets are recognized upon the transfer of the assets to the purchaser. Revenues from the sales of instruments and reagents are recognized upon shipment to the customer.

#### **Inventory**

Inventory is stated at the lower of cost (which approximates first-in, first out cost) or market. The balances at September 30, 2003 and December 31, 2002 were classified as raw materials and consisted primarily of reagents and other chemicals utilized while performing genomics discovery services. Inventory used in providing genomics discovery services and for reagent sales is charged to cost of services fees and other as consumed. Reagents and chemicals purchased for internal development purposes are charged to research and development expense as incurred.

#### **Net Income (Loss) Per Share**

Basic net income (loss) per share have been computed using the weighted-average number of shares of common stock outstanding during the period. Basic and diluted net loss per share amounts are the same in each period in which we have incurred a net loss. Since we had net income in the third quarter of 2003, diluted net income per share include the dilutive impact of certain of our outstanding options to purchase common stock, as calculated using the treasury stock method. At September 30, 2003, options to purchase approximately 238,000 shares of common stock at a weighted-average exercise price of \$2.12, were included in the calculation of diluted net income per share for the third quarter of 2003, which resulted in approximately 112,000 shares of common stock being added to the weighted-average number of common stock outstanding during the period to determine the number of shares used to compute diluted net earnings per share. Options to purchase approximately 291,300 shares of common stock at a weighted-average exercise price of \$70.58 per share, warrants to purchase 186,000 shares of common stock at an exercise price of \$9.91 per share, warrants to purchase 101,082 shares of common stock at an exercise price of \$39.76 per share, 41,714 shares of common stock at an exercise price of \$10.85 per share and 834,272 shares of common stock at an exercise price of \$13.58 per share were excluded from the calculation of diluted net income per share for the third quarter of 2003 because the effect of inclusion would be antidilutive. These remaining options and warrants will be included in the calculation at such time as the effect is no longer

**Table of Contents**

antidilutive, as calculated using the treasury stock method. At September 30, 2002, options to purchase approximately 418,000 shares of common stock at a weighted-average exercise price of \$74.26 per share and warrants to purchase 101,082 shares of common stock at an exercise price of \$39.76 per share, 41,714 shares of common stock at an exercise price of \$10.85 per share and 834,272 shares of common stock at an exercise price of \$13.58 per share were excluded from the calculation of diluted net loss per share for 2002 because the effect of inclusion would be antidilutive.

**Stock-Based Compensation**

We grant stock options for a fixed number of shares to employees with an exercise price equal to the fair value of the shares at the date of grant. We account for stock option grants in accordance with Accounting Principles Board (APB) Opinion No. 25, Accounting for Stock Issued to Employees (APB 25), and related Interpretations. Under APB 25, when the exercise price of our employee stock options equals the market price of the underlying stock on the date of grant, no compensation expense is recognized.

All stock option awards to non-employees are accounted for at the fair value of the consideration received or the fair value of the equity instrument issued, as calculated using the Black-Scholes model, in accordance with Statement of Financial Accounting Standards No. 123, Accounting for Stock-based Compensation, (SFAS 123) and Emerging Issues Task Force Consensus No. 96-18, Accounting for Equity Instruments that are Issued to Other Than Employees for Acquiring, or in Conjunction with Selling, Goods or Services. The option arrangements with non-employees are subject to periodic remeasurement over their vesting terms. Pro forma information regarding net income (loss) and net income (loss) per share required by SFAS 123, as amended by Statement of Financial Accounting Standards No. 148, Accounting for Stock-Based Compensation - Transition and Disclosure (SFAS 148), is presented below and has been determined as if we had accounted for awards under our stock option and employee stock purchase plans using the fair value method:

	Three Months Ended September 30,		Nine Months Ended September 30,	
	2003	2002	2003	2002
Net income (loss), as reported	\$ 1,813	\$ (3,274)	\$ (5,016)	\$ (12,510)
Add: Stock-based employee compensation as reported		123	9	612
Deduct: Stock-based employee compensation as if fair value method applied to all awards	(675)	(1,345)	(1,793)	(3,888)
Net income (loss), pro forma as if fair value method applied to all awards	\$ 1,138	\$ (4,496)	\$ (6,800)	\$ (15,786)
Basic net income (loss) per share, as reported	\$ 0.39	\$ (0.80)	\$ (1.07)	\$ (3.97)
Basic net income (loss) per share, pro forma as if fair value method applied to all awards	\$ 0.24	\$ (1.10)	\$ (1.46)	\$ (5.01)
Diluted net income (loss) per share, as reported	\$ 0.38	\$ (0.80)	\$ (1.07)	\$ (3.97)
Diluted net income (loss) per share, pro forma as if fair value method applied to all awards	\$ 0.24	\$ (1.10)	\$ (1.46)	\$ (5.01)

**Recent Accounting Pronouncements**

In January 2003, the FASB issued Interpretation No. 46 (FIN 46), Consolidation of Variable Interest Entities. In general, a variable interest entity is a corporation, partnership, trust, or any other legal structure used for business purposes that either (a) does not have equity investors with voting rights or (b) has equity investors that do not provide sufficient financial resources for the entity to support its activities. FIN 46 requires a variable interest entity to be consolidated by a company if that company is subject to a majority of the risk of loss from the variable interest entity's activities or entitled to receive a majority of the entity's residual returns or both. The consolidation requirements of FIN 46 apply immediately to variable interest entities created after January 31, 2003. The consolidation requirements apply to older entities in the first fiscal

## Edgar Filing: LYNX THERAPEUTICS INC - Form 10-Q

year or interim period ending after December 15, 2003. Certain of the disclosure requirements apply in all financial statements issued after January 31, 2003,

**Table of Contents**

regardless of when the variable interest entity was established. The Company does not believe the adoption of FIN 46 will have a material impact on its financial position or results of operations.

In November 2002, the Emerging Issues Task Force (EITF) reached a consensus regarding EITF Issue 00-21, Accounting for Revenue Arrangements with Multiple Deliverables. The consensus addresses not only when and how an arrangement involving multiple deliverables should be divided into separate units of accounting, but also how the arrangement's consideration should be allocated among separate units. The pronouncement is effective for revenue arrangements entered into in fiscal periods beginning after June 15, 2003. The adoption of EITF Issue 00-21 did not have a material effect on our results of operations or financial position.

In May 2003, the FASB issued Statement of Financial Accounting Standards No. 150, Accounting for Certain Financial Instruments with Characteristics of both Liabilities and Equity (SFAS 150). The Statement establishes standards for classifying and measuring as liabilities certain financial instruments that embody obligations of the issuer and have characteristics of both liabilities and equity. The Statement is effective for all financial instruments created or modified after May 31, 2003, and to other instruments for periods beginning after June 15, 2003. The adoption of SFAS 150 did not have a material effect on our results of operations or financial position.

**4. Comprehensive Loss**

The following are the components of comprehensive loss: (in thousands)

	<b>Three Months Ended September 30,</b>	
	<b>2003</b>	<b>2002</b>
Net income (loss)	\$ 1,813	\$ (3,274)
Net unrealized loss on available-for-sale securities		
Comprehensive income (loss)	\$ 1,813	\$ (3,274)
	<b>■</b>	<b>■</b>

  

	<b>Nine Months Ended September 30,</b>	
	<b>2003</b>	<b>2002</b>
Net income (loss)	\$ (5,016)	\$ (12,510)
Net unrealized loss on available-for-sale securities		(1,139)
Comprehensive income (loss)	\$ (5,016)	\$ (13,649)
	<b>■</b>	<b>■</b>

There was no accumulated other comprehensive income (loss) at either September 30, 2003 or December 31, 2002.

**5. Related-Party Transactions***Axaron Bioscience AG*

We hold an equity investment in Axaron Bioscience AG (Axaron). As of September 30, 2003, Lynx held approximately a 40% ownership interest in Axaron and had the ability to exercise significant influence over Axaron's operating and accounting policies. Lynx has accounted for the investment under the equity method in accordance with APB Opinion No. 18. Under the equity method, we record our pro-rata share of the income or losses of Axaron. Axaron is engaged in employing Lynx's technologies in its neuroscience, toxicology and microbiology research programs.

## Edgar Filing: LYNX THERAPEUTICS INC - Form 10-Q

In 2001, we extended our technology licensing agreement with Axaron. The license extends Axaron's right to use our proprietary MPSS and Megasort technologies non-exclusively in Axaron's neuroscience, toxicology and microbiology programs until December 31, 2007. In 2001, we made a capital investment in Axaron of approximately \$4.5 million. Also in 2001, we received from Axaron a \$5.0 million technology license fee, which was recorded as deferred revenue and is being recognized on a straight-line basis over the period from September 1, 2001 to December 31, 2007. The recorded revenue for the three-month and nine-month periods ended September 30,

**Table of Contents**

2003 was approximately \$190,000 and \$570,000, respectively. The recorded revenue for the three-month and nine-month periods ended September 30, 2002 was approximately \$190,000 and \$570,000, respectively. Our pro-rata share of Axaron's net financial results for the three-month and nine-month periods ended September 30, 2003 was income of approximately \$17,000 and a \$1.7 million loss, respectively. Our pro-rata share of Axaron's losses for the three-month and nine-month periods ended September 30, 2002 was approximately \$1.0 million and \$2.5 million, respectively.

We also sublease certain offices in Germany to Axaron. During the nine-month period ended September 30, 2003, we received an immaterial amount of sublease income from Axaron.

*Other Transactions with Related Parties*

For legal services and expenses, Lynx paid approximately \$235,000 during the nine-months ended September 30, 2003 to Cooley Godward LLP, Lynx's counsel, of which a director of Lynx is a partner.

For business development consulting services and expenses, Lynx paid approximately \$204,100 during the nine-months ended September 30, 2003 to L.E.K. Consulting LLC, of which a director of Lynx is President of their North American practice.

**6. Restructuring Charges**

In January 2003, we implemented a reduction of approximately 25% of our workforce, or 32 people. The groups affected primarily by this action included research and development personnel based at Lynx Therapeutics GmbH in Germany and those working in our proteomics group in California. The workforce reduction was intended to further focus our financial and human resources on expanding the commercial use of MPSS. We recorded a workforce reduction charge of \$0.3 million in the quarter ended March 31, 2003 related primarily to severance compensation expense for our former employees, which amounts had been paid entirely as of April 30, 2003.

**7. Common Stock**

On September 25, 2003, Lynx completed a \$3.0 million private placement of common stock and warrants to purchase common stock (the financing) resulting in proceeds of \$2.9 million, net of commissions and expenses. The financing included the sale of 744,000 shares of newly issued shares of common stock at \$4.03 per share and the issuance of warrants to purchase 186,000 shares of common stock at an exercise price of \$9.91 per share.

**Table of Contents**

**Item 2. Management's Discussion and Analysis of Financial Condition and Results of Operations**

*This discussion and analysis should be read in conjunction with our financial statements and accompanying notes included in this report and our 2002 audited financial statements and notes thereto included in our 2002 Annual Report on Form 10-K, as amended. Operating results for the quarter and nine months ended September 30, 2003 are not necessarily indicative of results that may occur in future periods.*

*Except for the historical information contained herein, the following discussion contains forward-looking statements that involve risks and uncertainties. When used herein, the words believe, anticipate, expect, estimate and similar expressions are intended to identify such forward-looking statements. There can be no assurance that these statements will prove to be correct. Our actual results could differ materially from those discussed here. Factors that could cause or contribute to such differences include, but are not limited to, those discussed in this section, as well as in our 2002 Annual Report on Form 10-K, as amended, as filed with the SEC. We undertake no obligation to update any of the forward-looking statements contained herein to reflect any future events or developments.*

**Overview**

We believe that Lynx Therapeutics, Inc. ( Lynx or the Company ) is a leader in the development and application of novel genomics analysis solutions that provide comprehensive and quantitative digital gene expression information important to modern systems biology research in the pharmaceutical, biotechnology and agricultural industries. These solutions are based on Megaclone and Massively Parallel Signature Sequencing, or MPSS , Lynx's unique and proprietary cloning and sequencing technologies. Gene expression refers to the number of genes and the extent a cell or tissue expresses those genes, and represents a way to move beyond DNA sequence data to understand the function of genes, the proteins that they encode and the role they play in health and disease. Systems biology is an approach in which researchers seek to gain a complete molecular understanding of biological systems in health and disease.

We have incurred net losses each year since our inception in 1992. As of September 30, 2003, we had an accumulated deficit of approximately \$104 million, including a net loss of \$5.0 million for the nine months ended September 30, 2003. Net losses may continue for at least the next several years as we proceed with the commercialization and additional development of our technologies. The size of these losses will depend on the rate of growth, if any, in our revenues and on the level of our expenses.

Our cash and cash equivalents have decreased from the \$11.7 million as of December 31, 2002. As of September 30, 2003, our cash and cash equivalents consisted of \$5.4 million in unrestricted cash and restricted cash of \$0.9 million. We will require additional funding to continue our business activities in 2004, and believe that sufficient funding will be available to meet our projected operating and capital requirements through at least December 31, 2004. We are considering various options, which include securing additional equity financing and obtaining new collaborators and customers. If we raise additional capital by issuing equity or convertible debt securities, our existing stockholders may experience substantial dilution. There can be no assurance that additional financing will be available on satisfactory terms, or at all. If we are unable to secure additional financing on reasonable terms, or are unable to generate sufficient new sources of revenue through arrangements with customers, collaborators and licensees, we will be forced to take substantial restructuring actions, which may include significantly reducing our anticipated level of expenditures, the sale of some or all of our assets, or obtaining funds by entering into financing or collaborative agreements on unattractive terms, or we will not be able to fund operations.

To date, we have received, and expect to continue to receive in the future, a significant portion of our revenues from a small number of collaborators, customers and licensees, as shown on the following table.

**Table of Contents**

	Nine Months Ended		Year Ended
	September 30, 2003	2002	December 31, 2002
Takara Bio Inc.	43%	12%	16%
E.I. DuPont de Nemours and Company	24%	37%	32%
BASF AG	16%	4%	11%
Bayer CropScience	5%	14%	14%
Geron Corporation		20%	15%

Revenues in each quarterly and annual period have in the past, and could in the future, fluctuate due to: the timing and amount of any technology access fees and the period over which the revenue is recognized; the level of service fees, which is tied to the number and timing of biological samples received from our collaborators and customers, as well as our performance of the related genomics discovery services on the samples; the timing of achievement of milestones and the amount of related payments to us; and the number, type and timing of new, and the termination of existing, agreements with collaborators, customers and licensees.

Our operating costs and expenses include cost of service fees and other, research and development expenses and general and administrative expenses. Cost of services fees and other includes primarily the costs of direct labor, materials and supplies, outside expenses, equipment and overhead incurred by us in performing our genomics discovery services for, and the costs of reagents and instruments sold to, our collaborators, customers and licensees. Research and development expenses include the costs of personnel, materials and supplies, outside expenses, equipment and overhead incurred by us in our technology and application development and process improvement efforts. Research and development expenses may increase due to spending for ongoing technology development and implementation, as well as new applications, primarily for MPSS. General and administrative expenses include the costs of personnel, materials and supplies, outside expenses, equipment and overhead incurred by us primarily in our administrative, business development, legal and investor relations activities. General and administrative expenses may increase in support of our research and development, commercial and business development efforts.

We account for our investment in Axaron Bioscience AG ( Axaron ), a company owned primarily by BASF AG and us, using the equity method. For the nine months ended September 30, 2003 and 2002, our pro-rata share of Axaron's losses was approximately \$1.7 million and \$2.5 million, respectively.

As of September 30, 2003, we employed 93 full-time employees, of which 77 were engaged in production and research and development activities. In January 2003, we implemented a reduction of approximately 25% of our total workforce, or 32 people. The groups affected primarily by this action included research and development personnel based at Lynx Therapeutics GmbH in Germany and our proteomics group in California. The workforce reduction was intended to further focus our financial and human resources on expanding the commercial use of MPSS.

**Results of Operations*****Revenues***

Revenues for the three-month period ended September 30, 2003 were approximately \$8.3 million, compared to revenues of \$4.8 million for the corresponding three-month period of 2002. Revenues for the three-month period in 2003 included technology access fees and service fees of \$7.0 million, license fees from Axaron, a related party, of \$190,000 and collaborative research and other revenues of \$1.0 million, primarily related to the sale of three MPSS instruments to Takara Bio Inc. ( Takara ). In addition to the \$1.0 million related to the sale of the instruments, we received a cash payment of approximately \$2.0 million from Takara related to an amendment of our existing collaboration with them. In the third quarter of 2003, we met the research and development obligations under the collaboration agreement, as amended, related to amounts that we have been paid by Takara, including those amounts that we had recorded previously as deferred revenue. Accordingly, we recognized such amounts, aggregating approximately \$2.5 million, as revenue in the third quarter of 2003. Revenues for the three-month

**Table of Contents**

period in 2002 included technology access fees and service fees of \$4.5 million, license fees from Axaron of \$190,000 and other revenues of \$126,000.

Revenues for the nine months ended September 30, 2003 were approximately \$16.1 million, compared to revenues of \$12.7 million for the corresponding nine-month period of 2002. Revenues for the nine-month period in 2003 included technology access fees and service fees of \$14.2 million, license fees from Axaron, a related party, of \$570,000 and other revenues of \$1.3 million. Revenues for the nine-month period in 2002 included technology access fees and service fees of \$9.1 million, license fees from Axaron of \$570,000 and other revenues of \$3.0 million, including \$2.6 million from the sale of certain of our technology assets.

Our revenues have historically fluctuated from quarter to quarter and year to year and may continue to fluctuate in future periods due primarily to our service fees, which are impacted principally by the timing and number of biological samples received from existing customers and collaborators, as well as our performance of related services on these samples. Additionally, the number, type and timing of new collaborations and agreements and the related demand for, and delivery of, our services or products will impact the level of future revenues.

***Operating Costs and Expenses***

Total operating costs and expenses were approximately \$5.8 million for the three-month period ended September 30, 2003, compared to approximately \$6.9 million for the three-month period ended September 30, 2002. For the nine-month periods ended September 30, 2003 and 2002, operating costs and expenses were approximately \$18.7 million and \$23.6 million, respectively.

For the three-month period in 2003, cost of services fees and other was \$1.5 million, compared to \$1.2 million for the corresponding period in 2002. Cost of services fees and other for the nine-months ended September 30, 2003 and 2002 were \$3.6 million and \$1.9 million, respectively. Cost of services fees and other reflect primarily the costs of providing our genomics discovery services, and in the third quarter of 2003, the cost of MPSS instruments sold to Takara.

Research and development expenses were approximately \$3.0 million for the three-month period ended September 30, 2003, compared to approximately \$4.3 million for the corresponding period in 2002. For the nine-month periods ended September 30, 2003 and 2002, research and development expenses were approximately \$9.7 million and \$16.6 million, respectively. The decrease in research and development expenses in 2003 reflects a decrease in materials consumed in research and development efforts and lower personnel expenses, primarily resulting from the workforce reductions that occurred in the first quarter of 2003 and the second quarter of 2002. Research and development expenses may increase due to spending for ongoing technology development and implementation, as well as new applications, primarily for MPSS.

General and administrative expenses were \$1.3 million for the three-month period ended September 30, 2003, compared to \$1.4 million for the corresponding period in 2002. For the nine-month periods ended September 30, 2003 and 2002, general and administrative expenses were approximately \$5.0 million and \$4.6 million, respectively. The increase in general and administrative expenses in the 2003 nine-month period over the same period in 2002 reflects primarily expenses for outside services in support of our commercial and business development efforts. General and administrative expenses may increase in support of our continuing commercial, business development and research and development activities.

In January 2003, we implemented a reduction of approximately 25% of our workforce, or 32 people. The groups affected primarily by this action included research and development personnel based at Lynx Therapeutics GmbH in Germany and in our proteomics group in California. The workforce reduction was intended to further focus our financial and human resources on expanding the commercial use of MPSS. We recorded a workforce reduction charge of \$0.3 million in the quarter ended March 31, 2003 related primarily to severance compensation expense for our former employees, which amounts had been paid entirely as of April 30, 2003. In terms of compensation, benefits and employer taxes that would have been paid to, and on behalf of, such former employees had they remained employed by Lynx, we anticipate annualized cost savings of approximately \$2.0 million.

## **Table of Contents**

The restructuring charge of \$0.5 million in the second quarter of 2002 was comprised primarily of severance charges for former Lynx employees who were part of Lynx's workforce reduction of approximately 30% of our domestic workforce, or 45 people, in that period. The group affected primarily by this action was research and development personnel in California. The workforce reduction was intended to focus our financial and human resources on expanding the commercial use of MPSS. In terms of compensation, benefits and employer taxes that would have been paid to, and on behalf of, such former employees had they remained employed by Lynx, we anticipate annualized cost savings of approximately \$3.0 million.

### ***Equity in Net Income (Loss) of Related Party***

The equity share of the financial results of related party for the three-month and nine-month periods ended September 30, 2003 was income of approximately \$17,000 and a loss of \$1.7 million, respectively, and for the three-month and nine-month periods ended September 30, 2002 was a loss of approximately \$1.0 million and \$2.5 million, respectively. These amounts reflect Lynx's pro-rata share of the net income or loss of Axaron, a joint venture investee.

### ***Interest Expense, Net***

Net interest expense was approximately \$5,000 for the quarter ended September 30, 2003, compared to net interest expense of approximately \$83,000 for the corresponding period of 2002. Net interest expense was approximately \$133,000 for the nine months ended September 30, 2003, compared to net interest expense of approximately \$207,000 for the corresponding period of 2002. The decrease in net interest expense from 2002 to 2003 reflects primarily higher interest income and lower interest expense in 2003 incurred on equipment-related debt outstanding during both the 2003 and 2002 periods.

### ***Other Income (Expense), Net***

Other expense was \$0.4 million in the quarter ended September 30, 2003, compared to other expense of approximately \$6,000 in the 2002 period. Other expense was \$0.4 million for the nine months ended September 30, 2003, compared to other income of \$0.9 million in the 2002 period. The other expense amount for the 2003 periods related primarily to the loss recorded on the sale of certain fixed assets no longer used in the operations of Lynx Therapeutics GmbH in Germany. The 2002 other income amount for the nine-month period was related primarily to the gain on the sale of our equity investment in Inex Pharmaceuticals Corporation.

### ***Income Tax Provision (Benefit)***

The provisions for income tax for the quarter and nine-months ended September 30, 2003 of approximately \$0.2 million, consisted entirely of foreign withholding tax on payments received from our licensee, Takara. The provision for income tax for the quarter ended September 30, 2002 of approximately \$0.1 million, consisted entirely of foreign withholding tax on a payment received from Takara. The income tax benefit for the 2002 nine-month period relates to refunds of federal and state income taxes, offset partially by the foreign withholding tax amount.

### ***Liquidity and Capital Resources***

Cash and cash equivalents at September 30, 2003 consisted of \$5.4 million in unrestricted cash and restricted cash of \$0.9 million. Net cash used in operating activities was \$6.1 million for the nine months ended September 30, 2003, as compared to \$12.8 million for the same period in 2002. The change was due primarily to a lower net loss and the greater increase in accounts payable in 2003 than in 2002, partially offset by a greater decrease in deferred revenues and the impact of the difference between non-cash expenses, losses and gains in the 2003 period as compared to the 2002 period. The amount of net cash used in operating activities differed from the 2003 net loss due primarily to the decrease in deferred revenues, partially offset by the adjustment for non-cash items, primarily depreciation and amortization expenses and the impact of our pro rata share of the net loss of Axaron. For the 2002 period, the amount of net cash used in operating activities differed from the net loss due primarily to the adjustment for non-cash items, primarily depreciation and amortization expenses and the impact of our pro rata share of the net

**Table of Contents**

loss of Axaron, partially offset by a decrease in deferred revenues and the adjustment for the non-cash gain on the sale of the antisense program in 2002.

Net cash used in investing activities of \$0.4 million for the nine-month period in 2003 was due primarily to expenditures for capital equipment. Net cash used in investing activities of \$0.1 million for the nine-month period in 2002 was due primarily to net purchases and maturities of short-term investments and expenditures on capital equipment, partially offset by proceeds from the sale of equity securities.

Net cash provided in financing activities of \$1.1 million for the nine months ended September 30, 2003 was due primarily to the issuance of common stock pursuant to a common stock purchase agreement between Lynx and certain investors, partially offset by repayment of principal under equipment-related debt. Net cash provided by financing activities of \$21.0 million during the 2002 nine-month period related primarily to the issuance of common stock pursuant to a common stock purchase agreement between Lynx and certain investors, partially offset by the repayment of principal under equipment-related debt.

In October 2002, we entered into a loan and security agreement with a financial institution, Comerica Bank-California, for an equipment line of credit of up to \$2.0 million with a draw-down period of one year. Under the initial advance, we drew down \$1.6 million in November 2002 related to the purchase of equipment made in previous periods. We granted Comerica Bank-California a security interest in all items we financed under this agreement. The initial advance under the loan to finance the purchase of equipment made in previous periods has a term of 24 months from the date of advance and bears interest at a rate of 7.25%. In May 2003, we renegotiated the terms of the agreement, which now require that we maintain a minimum cash balance of restricted cash and cash equivalents in an account at Comerica Bank-California of at least 110% of the principal balance under loans outstanding under this agreement until Comerica Bank-California receives payment in full of all outstanding obligations. As of September 30, 2003, the balance of restricted cash was approximately \$0.9 million. As of September 30, 2003, the principal balance under loans outstanding under this agreement was approximately \$860,000. We believe that we are in compliance with all terms of the loan agreement.

In late 1998, we entered into a financing agreement with a financial institution, Transamerica Business Credit Corporation, under which we drew down \$4.8 million during 1999 for the purchase of equipment and certain other capital expenditures. We granted the lender a security interest in all items financed by it under this agreement. Each draw down under the loan has a term of 48 months from the date of the draw down. As of September 30, 2003, the principal balance under loans outstanding under this agreement was \$673,000. The draw down period under the agreement expired on March 31, 2000.

We plan to use available funds for ongoing commercial and research and development activities, working capital and other general corporate purposes and capital expenditures. We expect capital investments during the remainder of 2003 will be less than \$0.5 million and will be comprised primarily of expenditures for capital equipment required in the normal course of business. We intend to invest our excess cash in investment-grade, interest-bearing securities.

We have obtained funding for our operations primarily through sales of preferred and common stock, payments received under contractual arrangements with customers, collaborators and licensees and interest income. Consequently, investors in our equity securities and our customers, collaborators and licensees are significant sources of liquidity for us. Therefore, our ability to maintain liquidity is dependent upon a number of uncertain factors, including but not limited to the following: our ability to advance and commercialize further our technologies; our ability to generate revenues through expanding existing collaborations, customer and licensee arrangements and obtaining significant new customers, collaborators and licensees; and the receptivity of capital markets toward our equity or debt securities. The cost, timing and amount of funds required for specific uses by us cannot be precisely determined at this time and will be based upon the progress and the scope of our commercial and research and development activities; payments received under customer, collaborative and license agreements; our ability to establish and maintain customer, collaborative and license agreements; costs of protecting intellectual property rights; legal and administrative costs; additional facilities capacity needs, and the availability of alternate methods of financing.

## **Table of Contents**

We have experienced losses since our inception of approximately \$104 million, including a net loss of \$5.0 million for the nine months ended September 30, 2003. Net losses may continue for at least the next several years as we proceed with the commercialization and additional development of our technologies. The size of these losses will depend on the rate of growth, if any, in our revenues and on the level of our expenses. Our cash and cash equivalents have decreased from the \$11.7 million as of December 31, 2002. As of September 30, 2003, our cash and cash equivalents consisted of \$5.4 million in unrestricted cash and restricted cash of \$0.9 million. We will require additional funding to continue our business activities in 2004, and believe that sufficient funding will be available to meet our projected operating and capital requirements through at least December 31, 2004. We are considering various options, which include securing additional equity financing and obtaining new collaborators and customers. If we raise additional capital by issuing equity or convertible debt securities, our existing stockholders may experience substantial dilution. There can be no assurance that additional financing will be available on satisfactory terms, or at all. If we are unable to secure additional financing on reasonable terms, or are unable to generate sufficient new sources of revenue through arrangements with customers, collaborators and licensees, we will be forced to take substantial restructuring actions, which may include significantly reducing our anticipated level of expenditures, the sale of some or all of our assets, or obtaining funds by entering into financing or collaborative agreements on unattractive terms, or we will not be able to fund operations.

## **Additional Business Risks**

Lynx's business faces significant risks. These risks include those described below and may include additional risks of which Lynx is not currently aware or which Lynx currently does not believe are material. If any of the events or circumstances described in the following risks actually occurs, our business, financial condition or results of operations could be materially adversely affected. These risks should be read in conjunction with the other information set forth in this report.

### **We have a history of net losses. We expect to continue to incur net losses, and we may not achieve or maintain profitability.**

We have incurred net losses each year since our inception in 1992, including net losses of approximately \$5.0 million for the nine months ended September 30, 2003, and \$15.5 million in 2002. As of September 30, 2003, we had an accumulated deficit of approximately \$104 million. Net losses may continue for at least the next several years. The presence and size of these potential net losses will depend, in part, on the rate of growth, if any, in our revenues and on the level of our expenses. Our research and development expenditures and general and administrative costs have exceeded our revenues to date. Research and development expenses may increase due to spending for ongoing technology development and implementation, as well as new applications. We will need to generate significant additional revenues to achieve profitability. Even if we do increase our revenues and achieve profitability, we may not be able to sustain profitability.

Our ability to generate revenues and achieve profitability depends on many factors, including:

- our ability to continue existing customer relationships and enter into additional corporate collaborations and agreements;
  - our ability to expand the scope of our products and services into new areas of pharmaceutical, biotechnology and agricultural research;
  - our customers' and collaborators' abilities to develop diagnostic, therapeutic and other commercial products from the application of our technologies; and
  - the successful clinical testing, regulatory approval and commercialization of such products by our customers and collaborators.
- The time required to reach profitability is highly uncertain. We may not achieve profitability on a sustained basis, if at all.

## **Table of Contents**

### **We will need additional funds in the future, which may not be available to us.**

We have invested significant capital in our scientific and business development activities. Our future capital requirements will be substantial as we conduct our operations, and will depend on many factors including:

- the progress and scope of our research and development projects;
- payments received under our customer, license and collaborative agreements;
- our ability to establish and maintain customer, license and collaborative arrangements;
- the progress of the development and commercialization efforts under our customer, license and collaborative agreements;
- the costs associated with obtaining access to biological samples and related information; and

the costs involved in preparing, filing, prosecuting, maintaining and enforcing patent claims and other intellectual property rights.

We have experienced losses since our inception, including a net loss of \$5.0 million for the nine months ended September 30, 2003. Net losses may continue for at least the next several years as we proceed with the commercialization and additional development of our technologies. The size of these losses will depend on the rate of growth, if any, in our revenues and on the level of our expenses. Our cash and cash equivalents have decreased from the \$11.7 million as of December 31, 2002. As of September 30, 2003, our cash and cash equivalents consisted of \$5.4 million in unrestricted cash and restricted cash of \$0.9 million. We will require additional funding to continue our business activities in 2004, and believe that sufficient funding will be available to meet our projected operating and capital requirements through at least December 31, 2004. We are considering various options, which include securing additional equity financing and obtaining new collaborators and customers. If we raise additional capital by issuing equity or convertible debt securities, our existing stockholders may experience substantial dilution. There can be no assurance that additional financing will be available on satisfactory terms, or at all. If we are unable to secure additional financing on reasonable terms, or are unable to generate sufficient new sources of revenue through arrangements with customers, collaborators and licensees, we will be forced to take substantial restructuring actions, which may include significantly reducing our anticipated level of expenditures, the sale of some or all of our assets, or obtaining funds by entering into financing or collaborative agreements on unattractive terms, or we will not be able to fund operations.

### **Our technologies are new and unproven and may not allow our customers, collaborators or us to identify genes, proteins or targets for drug discovery.**

You must evaluate us in light of the uncertainties and complexities affecting an early stage genomics company. Our technologies are new and unproven. The application of these technologies is in too early a stage to determine whether it can be successfully implemented. These technologies assume that information about gene expression and gene sequences may enable scientists to better understand complex biological processes. Our technologies also depend on the successful integration of independent technologies, each of which has its own development risks. Relatively few therapeutic products based on gene discoveries have been successfully developed and commercialized. Our technologies may not enable our customers, collaborators or us to identify genes, proteins or targets for drug discovery. To date, neither our customers nor we have identified any targets for drug discovery based on our technologies.

### **We are dependent on our customers and collaborators and will need to find additional customers and collaborators in the future to develop and commercialize diagnostic or therapeutic products.**

Our strategy for the development and commercialization of our technologies and potential products includes entering into collaborations, customer agreements or licensing arrangements with pharmaceutical, biotechnology and agricultural companies and research institutes. We do not have the resources to develop or commercialize diagnostic or therapeutic products on our own. If we cannot negotiate additional collaborative arrangements or contracts on acceptable terms, or at all, or such collaborations or relationships are not successful, we may never become profitable.

**Table of Contents**

We have derived substantially all of our revenues from corporate collaborations, customer agreements and licensing arrangements. Revenues from such agreements depend upon continuation of the related relationships, our performance of genomics discovery services, the achievement of milestones and royalties derived from future products developed from our research and technologies. To date, we have received, and expect to continue to receive in the future, a significant portion of our revenues from a small number of collaborators, customers and licensees.

	Nine Months Ended		Year Ended
	September 30, 2003	2002	December 31, 2002
Takara Bio Inc.	43%	12%	16%
E.I. DuPont de Nemours and Company	24%	37%	32%
BASF AG	16%	4%	11%
Bayer CropScience	5%	14%	14%
Geron Corporation		20%	15%

If we fail to perform genomics discovery services or successfully achieve milestones or our collaborators fail to develop successful products, we will not earn the revenues contemplated under such agreements. If our collaborators, customers or licensees do not renew existing agreements, we lose one of these collaborators, customers or licensees, we do not attract new collaborators, customers or licensees or we are unable to enter into new collaborative, customer or license agreements on commercially acceptable terms, our revenues may decrease, and our activities may fail to lead to commercialized products.

Our dependence on collaborations with third parties subjects us to a number of risks. We have limited or no control over the resources that our collaborators may choose to devote to our joint efforts. Our collaborators may breach or terminate their agreements with us or fail to perform their obligations thereunder. Further, our collaborators may elect not to develop products arising out of our collaborative arrangements or may fail to devote sufficient resources to the development, manufacture, marketing or sale of such products. While we do not currently compete directly with any of our customers and collaborators, some of our customers and collaborators could become our competitors in the future if they internally develop DNA analysis technologies or if they acquire other genomics companies and move into the genomics industry. We will not earn the revenues contemplated under our customer and collaborative arrangements, if our customers and collaborators:

do not develop commercially successful products using our technologies;

develop competing products;

preclude us from entering into collaborations with their competitors;

fail to obtain necessary regulatory approvals; or

terminate their agreements with us.

**We depend on a single supplier to manufacture flow cells used in our MPSS technology.**

Flow cells are glass plates that are micromachined, or fabricated to very precise, small dimensions, to create a grooved chamber for immobilizing micro-beads in a planar microarray, which is a two-dimensional, dense ordered array of DNA samples. We use flow cells in our MPSS technology. We currently purchase the flow cells used in our MPSS technology from a single supplier, although the flow cells are potentially available from multiple suppliers. While we believe that alternative suppliers for flow cells exist, identifying and qualifying new suppliers could be an expensive and time-consuming process. Our reliance on outside vendors involves several risks, including:

the inability to obtain an adequate supply of required components due to manufacturing capacity constraints, a discontinuance of a product by a third-party manufacturer or other supply constraints;

**Table of Contents**

reduced control over quality and pricing of components; and

delays and long lead times in receiving materials from vendors.

**We operate in an intensely competitive industry with rapidly evolving technologies, and our competitors may develop products and technologies that make ours obsolete.**

The biotechnology industry is highly fragmented and is characterized by rapid technological change. In particular, the area of genomics research is a rapidly evolving field. Competition among entities attempting to identify genes and proteins associated with specific diseases and to develop products based on such discoveries is intense. Many of our competitors have substantially greater research and product development capabilities and financial, scientific and marketing resources than we do.

We face, and will continue to face, competition from pharmaceutical, biotechnology and agricultural companies, as well as academic research institutions, clinical reference laboratories and government agencies. Some of our competitors, such as Affymetrix, Inc., Celera Genomics Group, Incyte Genomics, Inc., Gene Logic, Inc., and Genome Therapeutics Corporation may be:

attempting to identify and patent randomly sequenced genes and gene fragments and proteins;

pursuing a gene identification, characterization and product development strategy based on positional cloning, which uses disease inheritance patterns to isolate the genes that are linked to the transmission of disease from one generation to the next; and

using a variety of different gene and protein expression analysis methodologies, including the use of chip-based systems, to attempt to identify disease-related genes and proteins.

In addition, numerous pharmaceutical, biotechnology and agricultural companies are developing genomics research programs, either alone or in partnership with our competitors. Our future success will depend on our ability to maintain a competitive position with respect to technological advances. Rapid technological development by others may make our technologies and future products obsolete.

Any products developed through our technologies will compete in highly competitive markets. Our competitors may be more effective at using their technologies to develop commercial products. Further, our competitors may obtain intellectual property rights that would limit the use of our technologies or the commercialization of diagnostic or therapeutic products using our technologies. As a result, our competitors products or technologies may render our technologies and products, and those of our collaborators, obsolete or noncompetitive.

**If we fail to adequately protect our proprietary technologies, third parties may be able to use our technologies, which could prevent us from competing in the market.**

Our success depends in part on our ability to obtain patents and maintain adequate protection of the intellectual property related to our technologies and products. The patent positions of biotechnology companies, including our patent position, are generally uncertain and involve complex legal and factual questions. We will be able to protect our proprietary rights from unauthorized use by third parties only to the extent that our proprietary technologies are covered by valid and enforceable patents or are effectively maintained as trade secrets. The laws of some foreign countries do not protect proprietary rights to the same extent as the laws of the U.S., and many companies have encountered significant problems in protecting and defending their proprietary rights in foreign jurisdictions. We have applied and will continue to apply for patents covering our technologies, processes and products as and when we deem appropriate. However, third parties may challenge these applications, or these applications may fail to result in issued patents. Our existing patents and any future patents we obtain may not be sufficiently broad to prevent others from practicing our technologies or from developing competing products. Furthermore, others may independently develop similar or alternative technologies or design around our patents. In addition, our patents may be challenged or invalidated or fail to provide us with any competitive advantage.

We also rely on trade secret protection for our confidential and proprietary information. However, trade secrets are difficult to protect. We protect our proprietary information and processes, in part, with confidentiality

## **Table of Contents**

agreements with employees, collaborators and consultants. However, third parties may breach these agreements, we may not have adequate remedies for any such breach or our trade secrets may still otherwise become known by our competitors. In addition, our competitors may independently develop substantially equivalent proprietary information.

### **Litigation or third-party claims of intellectual property infringement could require us to spend substantial time and money and adversely affect our ability to develop and commercialize our technologies and products.**

Our commercial success depends in part on our ability to avoid infringing patents and proprietary rights of third parties and not breaching any licenses that we have entered into with regard to our technologies. Other parties have filed, and in the future are likely to file, patent applications covering genes, gene fragments, proteins, the analysis of gene expression and protein expression and the manufacture and use of DNA chips or microarrays, which are tiny glass or silicon wafers on which tens of thousands of DNA molecules can be arrayed on the surface for subsequent analysis. We intend to continue to apply for patent protection for methods relating to gene expression and protein expression and for the individual disease genes and proteins and drug discovery targets we discover. If patents covering technologies required by our operations are issued to others, we may have to rely on licenses from third parties, which may not be available on commercially reasonable terms, or at all.

Third parties may accuse us of employing their proprietary technology without authorization. In addition, third parties may obtain patents that relate to our technologies and claim that use of such technologies infringes these patents. Regardless of their merit, such claims could require us to incur substantial costs, including the diversion of management and technical personnel, in defending ourselves against any such claims or enforcing our patents. In the event that a successful claim of infringement is brought against us, we may need to pay damages and obtain one or more licenses from third parties. We may not be able to obtain these licenses at a reasonable cost, or at all. Defense of any lawsuit or failure to obtain any of these licenses could adversely affect our ability to develop and commercialize our technologies and products and thus prevent us from achieving profitability.

### **We have limited experience in sales and marketing and thus may be unable to further commercialize our technologies and products.**

Our ability to achieve profitability depends on attracting collaborators and customers for our technologies and products. There are a limited number of pharmaceutical, biotechnology and agricultural companies and research institutes that are potential collaborators and customers for our technologies and products. To market our technologies and products, we must develop a sales and marketing group with the appropriate technical expertise. We may not successfully build such a sales force. If our sales and marketing efforts fail to be successful, our technologies and products may fail to gain market acceptance.

### **Our sales cycle is lengthy, and we may spend considerable resources on unsuccessful sales efforts or may not be able to enter into agreements on the schedule we anticipate.**

Our ability to obtain collaborators and customers for our technologies and products depends in significant part upon the perception that our technologies and products can help accelerate their drug discovery and genomics efforts. Our sales cycle is typically lengthy because we need to educate our potential collaborators and customers and sell the benefits of our products to a variety of constituencies within such companies. In addition, we may be required to negotiate agreements containing terms unique to each collaborator or customer. We may expend substantial funds and management effort without any assurance that we will successfully sell our technologies and products. Actual and proposed consolidations of pharmaceutical companies have negatively affected, and may in the future negatively affect, the timing and progress of our sales efforts.

### **The loss of key personnel or the inability to attract and retain additional personnel could impair the growth of our business.**

We are highly dependent on the principal members of our management and scientific staff. The loss of any of these persons' services might adversely impact the achievement of our objectives and the continuation of existing customer, collaborative and license agreements. In addition, recruiting and retaining qualified scientific personnel to

## **Table of Contents**

perform future research and development work will be critical to our success. There is currently a shortage of skilled executives and employees with technical expertise, and this shortage is likely to continue. As a result, competition for skilled personnel is intense and turnover rates are high. Competition for experienced scientists from numerous companies, academic and other research institutions may limit our ability to attract and retain such personnel. We depend on our President and Chief Executive Officer, Kevin P. Corcoran, the loss of whose services could have a material adverse effect on our business. Although we have an employment agreement with Mr. Corcoran in place, currently we do not maintain key person insurance for him or any other key personnel.

**We use hazardous chemicals and radioactive and biological materials in our business. Any claims relating to improper handling, storage or disposal of these materials could be time consuming and costly.**

Our research and development processes involve the controlled use of hazardous materials, including chemicals and radioactive and biological materials. Our operations produce hazardous waste products. We cannot eliminate the risk of accidental contamination or discharge and any resultant injury from these materials. We may be sued for any injury or contamination that results from our use or the use by third parties of these materials, and our liability may exceed our insurance coverage and our total assets. Federal, state and local laws and regulations govern the use, manufacture, storage, handling and disposal of hazardous materials. Compliance with environmental laws and regulations may be expensive, and current or future environmental regulations may impair our research, development and production efforts.

**Ethical, legal and social issues may limit the public acceptance of, and demand for, our technologies and products.**

Our collaborators and customers may seek to develop diagnostic products based on genes or proteins. The prospect of broadly available gene-based diagnostic tests raises ethical, legal and social issues regarding the appropriate use of gene-based diagnostic testing and the resulting confidential information. It is possible that discrimination by third-party payors, based on the results of such testing, could lead to the increase of premiums by such payors to prohibitive levels, outright cancellation of insurance or unwillingness to provide coverage to individuals showing unfavorable gene or protein expression profiles. Similarly, employers could discriminate against employees with gene or protein expression profiles indicative of the potential for high disease-related costs and lost employment time. Finally, government authorities could, for social or other purposes, limit or prohibit the use of such tests under certain circumstances. These ethical, legal and social concerns about genetic testing and target identification may delay or prevent market acceptance of our technologies and products.

Although our technology does not depend on genetic engineering, genetic engineering plays a prominent role in our approach to product development. The subject of genetically modified food has received negative publicity, which has aroused public debate. Adverse publicity has resulted in greater regulation internationally and trade restrictions on imports of genetically altered agricultural products. Claims that genetically engineered products are unsafe for consumption or pose a danger to the environment may influence public attitudes and prevent genetically engineered products from gaining public acceptance. The commercial success of our future products may depend, in part, on public acceptance of the use of genetically engineered products, including drugs and plant and animal products.

**If we develop products with our collaborators, and if product liability lawsuits are successfully brought against us, we could face substantial liabilities that exceed our resources.**

We may be held liable, if any product we develop with our collaborators causes injury or is otherwise found unsuitable during product testing, manufacturing, marketing or sale. Although we have general liability and product liability insurance, this insurance may become prohibitively expensive or may not fully cover our potential liabilities. Inability to obtain sufficient insurance coverage at an acceptable cost or to otherwise protect us against potential product liability claims could prevent or inhibit our ability to commercialize products developed with our collaborators.

**Table of Contents**

**Healthcare reform and restrictions on reimbursements may limit our returns on diagnostic or therapeutic products that we may develop with our collaborators.**

If we successfully validate targets for drug discovery, products that we develop with our collaborators based on those targets may include diagnostic or therapeutic products. The ability of our collaborators to commercialize such products may depend, in part, on the extent to which reimbursement for the cost of these products will be available from government health administration authorities, private health insurers and other organizations. In the U.S., third-party payors are increasingly challenging the price of medical products and services. The trend towards managed healthcare in the U.S., legislative healthcare reforms and the growth of organizations such as health maintenance organizations that may control or significantly influence the purchase of healthcare products and services, may result in lower prices for any products our collaborators may develop. Significant uncertainty exists as to the reimbursement status of newly approved healthcare products. If adequate third-party coverage is not available in the future, our collaborators may fail to maintain price levels sufficient to realize an appropriate return on their investment in research and product development.

**Our facilities are located near known earthquake fault zones, and the occurrence of an earthquake or other catastrophic disaster could cause damage to our facilities and equipment, which could require us to cease or curtail operations.**

Our facilities are located near known earthquake fault zones and are vulnerable to damage from earthquakes. We are also vulnerable to damage from other types of disasters, including fire, floods, power loss, communications failures and similar events. If any disaster were to occur, our ability to operate our business at our facilities would be seriously, or potentially completely, impaired. In addition, the unique nature of our research activities could cause significant delays in our programs and make it difficult for us to recover from a disaster. The insurance we maintain may not be adequate to cover our losses resulting from disasters or other business interruptions. Accordingly, an earthquake or other disaster could materially and adversely harm our ability to conduct business.

**Our stock price may be extremely volatile.**

We believe that the market price of our common stock will remain highly volatile and may fluctuate significantly due to a number of factors. The market prices for securities of many publicly-held, early-stage biotechnology companies have in the past been, and can in the future be expected to be, especially volatile. For example, during the two-year period from September 28, 2001 to September 30, 2003, the closing sales price of our common stock as quoted on the Nasdaq National Market fluctuated from a low of \$1.61 to a high of \$32.89 per share. In addition, the securities markets have from time to time experienced significant price and volume fluctuations that may be unrelated to the operating performance of particular companies. The following factors and events may have a significant and adverse impact on the market price of our common stock:

fluctuations in our operating results;

announcements of technological innovations or new commercial products by us or our competitors;

release of reports by securities analysts;

developments or disputes concerning patent or proprietary rights;

developments in our relationships with current or future collaborators, customers or licensees; and

general market conditions.

Many of these factors are beyond our control. These factors may cause a decrease in the market price of our common stock, regardless of our operating performance.

**Table of Contents**

**Our securities have been transferred from the Nasdaq National Market to the Nasdaq SmallCap Market, which has subjected us to various statutory requirements and may have adversely affected the liquidity of our common stock, and a failure by us to meet the listing maintenance standards of the Nasdaq SmallCap Market could result in delisting from the Nasdaq SmallCap Market.**

Effective May 22, 2003, a Nasdaq Qualifications Panel terminated our Nasdaq National Market Listing and transferred our securities to the Nasdaq SmallCap Market. In order to maintain the listing of our securities on the Nasdaq SmallCap Market, we must be able to demonstrate compliance with all applicable listing maintenance requirements. In the event we are unable to do so, our securities will be delisted from the Nasdaq Stock Market.

With our securities listed on the Nasdaq SmallCap Market, we face a variety of legal and other consequences that will likely negatively affect our business including, without limitation, the following:

we may have lost our exemption from the provisions of Section 2115 of the California Corporations Code, which imposes aspects of California corporate law on certain non-California corporations operating within California. As a result, (i) our stockholders may be entitled to cumulative voting and (ii) we may be subject to more stringent stockholder approval requirements and more stockholder-favorable dissenters' rights in connection with certain strategic transactions;

the state securities law exemptions available to us are more limited, and, as a result, future issuances of our securities may require time-consuming and costly registration statements and qualifications;

due to the application of different securities law exemptions and provisions, we have been required to amend our stock option plan, suspend our stock purchase plan and must comply with time-consuming and costly administrative procedures;

the coverage of Lynx by securities analysts may decrease or cease entirely; and

we may lose current or potential investors.

In addition, we are required to satisfy various listing maintenance standards for our common stock to be quoted on the Nasdaq SmallCap Market. If we fail to meet such standards, our common stock would likely be delisted from the Nasdaq SmallCap Market and trade on the over-the-counter bulletin board, commonly referred to as the "pink sheets." This alternative is generally considered to be a less efficient market and would seriously impair the liquidity of our common stock and limit our potential to raise future capital through the sale of our common stock, which could materially harm our business.

**Anti-takeover provisions in our charter documents and under Delaware law may make it more difficult to acquire us or to effect a change in our management, even though an acquisition or management change may be beneficial to our stockholders.**

Under our certificate of incorporation, our board of directors has the authority, without further action by the holders of our common stock, to issue 2,000,000 additional shares of preferred stock from time to time in series and with preferences and rights as it may designate. These preferences and rights may be superior to those of the holders of our common stock. For example, the holders of preferred stock may be given a preference in payment upon our liquidation or for the payment or accumulation of dividends before any distributions are made to the holders of common stock.

Any authorization or issuance of preferred stock, while providing desirable flexibility in connection with financings, possible acquisitions and other corporate purposes, could also have the effect of making it more difficult for a third party to acquire a majority of our outstanding voting stock or making it more difficult to remove directors and effect a change in management. The preferred stock may have other rights, including economic rights senior to those of our common stock, and, as a result, an issuance of additional preferred stock could lower the market value of our common stock. Provisions of Delaware law may also discourage, delay or prevent someone from acquiring or merging with us.

**Table of Contents**

**Item 3. Quantitative and Qualitative Disclosures About Market Risk**

**Short-Term Investments**

The primary objective of our investment activities is to preserve principal while, at the same time, maximizing yields without significantly increasing risk. To achieve this objective, we invest in highly liquid and high-quality debt securities. Our investments in debt securities are subject to interest rate risk. To minimize the exposure due to adverse shifts in interest rates, we invest in short-term securities and maintain an average maturity of less than 90 days. As a result, we do not believe we are subject to significant interest rate risk.

**Foreign Currency Rate Fluctuations**

The functional currency for our German subsidiary is the Euro. Our German subsidiary's accounts are translated from the Euro to the U.S. dollar using the current exchange rate in effect at the balance sheet date for balance sheet accounts, and using the average exchange rate during the period for revenues and expense accounts. The effects of translation are recorded as a separate component of stockholders' equity, and to date, have not been material. Our German subsidiary conducts its business primarily in Euros. Exchange gains and losses arising from these transactions are recorded using the actual exchange differences on the date of the transaction. We have not taken any action to reduce our exposure to changes in foreign currency exchange rates, such as options or futures contracts, with respect to transactions with our German subsidiary or transactions with our European collaborators and customers.

**Item 4. Controls and Procedures**

Based on their evaluation as of September 30, 2003, our chief executive officer and chief financial officer, have concluded that our disclosure controls and procedures (as defined in Rules 13a-15(e) and 15d-15(e) under the Securities Exchange Act of 1934, as amended) were sufficiently effective to ensure that the information required to be disclosed by us in this quarterly report on Form 10-Q was recorded, processed, summarized and reported within the time periods specified in the Securities and Exchange Commission's rules and Form 10-Q.

There were no changes in our internal controls over financial reporting during the quarter ended September 30, 2003 that have materially affected, or are reasonably likely to materially affect our internal control over financial reporting.

Our management, including the chief financial officer and chief executive officer, does not expect that our disclosure controls and procedures or our internal controls will prevent all error and all fraud. A control system, no matter how well conceived and operated, can provide only reasonable, not absolute, assurance that the objectives of the control system are met. Further, the design of a control system must reflect the fact that there are resource constraints, and the benefits of controls must be considered relative to their costs. Because of the inherent limitations in all control systems, no evaluation of controls can provide absolute assurance that all control issues and instances of fraud, if any, within a company have been detected. These inherent limitations include the realities that judgments in decision-making can be faulty, and that breakdowns can occur because of simple error or mistake. Additionally, controls can be circumvented by the individual acts of some persons, by collusion of two or more people, or by management override of the control. The design of any system of controls also is based in part upon certain assumptions about the likelihood of future events, and there can be no assurance that any design will succeed in achieving its stated goals under potential future conditions; over time, control may become inadequate because of changes in conditions, or the degree of compliance with the policies or procedures may deteriorate. Because of the inherent limitations in a cost-effective control system, misstatements due to error or fraud may occur and not be detected. Accordingly, our disclosure controls and procedures are designed to provide reasonable, not absolute, assurance that the objectives of our disclosure control system are met and, as set forth above, our chief executive officer and chief financial officer have concluded, based on their evaluation as of September 30, 2003, that our disclosure controls and procedures were effective to provide reasonable assurance that the objectives of our disclosure controls and procedures were met.

**Table of Contents****PART II. OTHER INFORMATION****Item 2. Changes in Securities and Use of Proceeds**

(c) On September 25, 2003, Lynx completed a \$3.0 million private placement of common stock and warrants to purchase common stock (the financing ) resulting in proceeds of \$2.9 million, net of commissions and expenses. The financing included the sale of 744,000 shares of newly issued shares of common stock at \$4.03 per share and the issuance of warrants to purchase 186,000 shares of common stock at an exercise price of \$9.91 per share. We issued the newly issued shares of common stock and warrants to purchase common stock in reliance upon an exemption from the registration requirements of the Securities Act by virtue of Section 4(2) thereof and Regulation D promulgated thereunder. In October 2003, Lynx filed with the SEC a resale registration statement on Form S-3 (No. 333-109589) relating to the issued securities, which the SEC declared effective on October 22, 2003.

**Item 6. Exhibits and Reports on Form 8-K.**

- a) Exhibits The following documents are filed as Exhibits to this report:

Exhibit Number	Description
3.1	Amended and Restated Certificate of Incorporation of the Company, incorporated by reference to the indicated exhibit of the Company's Form 10-Q for the period ended September 30, 2000.
3.1.1	Certificate of Amendment to Amended and Restated Certificate of Incorporation of the Company, incorporated by reference to the indicated exhibit of the Company's Form 10-K for the year ended December 31, 2002.
3.2	Bylaws of the Company, as amended, incorporated by reference to the indicated exhibit of the Company's Form 10-Q for the period ended June 30, 2000.
4.1	Form of Common Stock Certificate, incorporated by reference to Exhibit 4.2 of the Company's Statement Form 10 (File No. 0-22570), as amended.
10.17.2+	Amendment No. 2 to Collaboration Agreement, dated June 30, 2003, by and between the Company and Takara Bio Inc.
10.39	Securities Purchase Agreement by and among the Company and the investors listed therein, incorporated by reference to the indicated exhibit of the Company's Form 8-K filed on September 25, 2003.
10.40	Form of Warrant issued by the Company in favor of each investor, incorporated by reference to the indicated exhibit of the Company's Form 8-K filed on September 25, 2003.
10.41+	Services Agreement, by and between E.I. du Pont de Nemours and Company.
31.1	Certification required by Rule 13a-14(a) or Rule 15d-14(a).
31.2	Certification required by Rule 13a-14(a) or Rule 15d-14(a).
32.1*	Certification required by Rule 13a-14(a) or Rule 15d-14(a) and Section 1350 of Chapter 63 of Title 18 of the United States Code (18 U.S.C. 1350).

- b) Reports on Form 8-K.

A Current Report on Form 8-K was filed on September 25, 2003 describing and furnishing the press release announcing a private equity financing.

A Current Report on Form 8-K was filed on August 13, 2003 describing and furnishing the press release announcing our financial results for the quarter ended June 30, 2003.
